Releases il Service st Entry In Smart Net Set

By Phil Hirsch

CW Washington Bureau
WASHINGTON, D.C. — MCI Communications Corp. last week unveiled an electronic mail service that offers rates substantially below current competitive offerings.

Dubbed MCI Mail, it is the first of several smart network services that will be offered by MCI Digital Information Service Corp., a newly formed MCI subsidiary.

For \$1, an MCI Mail subscriber can transmit up to 7,500 characters to any other subscriber. That is the equivalent of about five pages of text, according to the company. Alternatively, a private courier service such as Purolator Corp. will deliver a hard copy of the same message to an addressee located in any of 15 major cities. MCI has a processing center in each city equipped with a laser printer. Delivery is guaranteed within four hours after the message has been sent.

Overnight courier delivery of a

Teenage Hacker Lectures House On DP Security

By Jake Kirchner

CW Washington Bureau
WASHINGTON, D.C. — Accessing computer systems linked to telecommunications networks without authorization is almost child's play. But effective preventive measures are simple and inexpensive, one of the infamous "414" hackers told a House of Representatives subcommittee last week.

The 414s are a group of young computer enthusiasts who gained notoriety recently following reports of their alleged breaches of computer security around the country.

Neal Patrick, a 17-year-old high school senior, told the Science and Technology Subcommittee on Transportation, Aviation and Materials that he is, in the words of his attorney, who accompanied him, "not an information age Robin Hood" and he regrets his actions. Patrick said he now realizes "the potential for damage was enormous" in the actions of the loosely knit, seven-person 414 group.

The group reportedly accessed via GTE Telenet Communications Corp.'s Telenet network some five dozen computer systems around the
(Continued on Page 12)

As two teams clash on the collegiate gridiron, it becomes a simple test of strategic mind against sheer muscle, right? Wrong. In today's football, as in many sports, the computer plays an increasingly important role in planning before, during and after the big game. And if you want to be a football hero, you can't just rely on microcomputers, as Boston College's Eagles have shown. See Page 15.

Inside

The vendor delivered and the installation went fine. However, one of the first users of IBM's System/36 minicomputer is still waiting for IBM to deliver the necessary machine code needed to convert programs from a System/34 computer. Page 5.

Speaking of deliveries, Digital Equipment Corp. last week put its stamp on a souped-up version of its Rainbow personal computer. The firm also unveiled a buyer's protection plan for both retail and corporate customers. Page 6.

The police in Michigan also had their share of deliveries recently, in the form of an alleged con artist/thief who was nabbed by an on-line reality computer system called Midas while allegedly going for someone else's "gold." Page 14.

The breakup of AT&T will be completed Jan. 1. However, the firm's local communications spirit will live on in the form of an independent Central Services Organization. Run by former Bell employees, the CSO will aid regional networks and even dabble in cellular radio. Page 65.

Storage Technology Corp. has announced a nonerasable optical disk storage system that boasts up to 4G bytes of memory and is one of the first to be compatible with IBM mainframes. Page 75.

Is the shine on Apple Computer, Inc. beginning to fade? That's what analysts say, especially following a severed micro-to-mainframe agreement with Cullinet Software, Inc. and lack of demand for its highly touted Lisa computer. Page 89.

Corporate Power Struggle Brewing Merger of Voice, Data Networks Foreseen

By Jim Bartimo

CW Staff

SAN DIEGO — A major power struggle is brewing between the voice and data communications departments as corporations combine voice and data on the same network.

Most of the randomly selected attendees of the Tele-Communications Association annual meeting (TCA '83) held here last week said that the struggle will force both departments to merge, with voice communications emerging as the dominant technology.

A few of the telecommunications managers and attendees surveyed at the show referred to data processing professionals as "empire builders" and "power brokers," noting that voice communications professionals are much more accustomed to work-

ing with users than are the data departments.

"They speak a language all their own," said one telecommunications manager who chose to remain anonymous. "We wanted to buy electronic typewriters, and the data processing department said we had to go through them first because the machines had memory."

The merging of the voice department (usually organized under facilities or building management) and data departments (under the umbrella of administration) will involve a major reorganization, according to

Harris Unwraps 48-Bit System Aimed at DEC, DG Superminis

By Ed Scannell

CW Staff

FORT LAUDERDALE, Fla. — Billing it as the industry's fastest single-processor superminicomputer, Harris Corp. today unveiled a top-of-the-line 48-bit, virtual-memory system that will be directed at both the scientific and high-performance business markets. The Harris 1000 is the firm's most powerful minicomputer to date.

Capable of processing four million instructions per second, the Harris 1000 is 350% faster than Digital Equipment Corp.'s VAX-11/780 and almost 60% faster than Data General Corp.'s MV/10000 superminicomputers in scientific applications, according to Harris' Whetstone benchmark tests.

The Model 1000 is software-compatible with Harris' Model 600, 700 and 800 superminicomputers and can also use those systems' peripherals. Fully configured, the Model 1000 supports 192 terminals, a spokesman said.

Harris attributes the Model 1000's processing speed in part to the first-time use of 100K-bit emitter-coupled logic technology, which the company claims is two to three times faster than Schottky transistor-transistor logic technology.

By incorporating ECL circuitry into the 1000's CPU, designers were able to employ high-speed large-scale integrated circuits and interconnection techniques usually re-

Dennis Briley, manager of general services for Downey Savings and Loan Association of Costa Mesa, Calif.

"From a prejudiced viewpoint, I think the network is going to end up on the voice side with the [private branch exchange]," Briley said. "Data people would like to keep their data world intact, but with the personal computer in the company, the back room secret is out."

In addition to the DP department's alleged reputation for not delivering quality service to the end user, there is the problem that telephones are mostly analog and computers are all digital.

"They're in two different worlds right now," said Dale Lindsay, telecommunications analyst for the Los

Facing Charge of Pirating Copy

FBI Nabs Student in Software Theft

By Jeffrey Beeler
CW West Coast Bureau

SAN FRANCISCO — Local Federal Bureau of Investigation agents last month arrested a Purdue University student who allegedly tried to sell a pirated copy of his former employer's proprietary software product to a Bay Area-based consulting firm.

James Barrick Jr., 22, has been charged with interstate transportation of stolen property for reportedly offering a finite element modeling program, including its source code, to Anamet Laboratories, Inc. in nearby San Carlos, Calif.

Used primarily by structural engineers, the Supertab Release 7.0 program is the brainchild of Milford, Ohio-based Structural Dynamics Research Corp. (SDRC), where Barrick worked on and off under a co-op student agreement between SDRC and Purdue.

Until his Sept. 9 arrest, Barrick was one of about 20 participants in the co-op student program, in which university students work at SDRC and pursue their undergraduate studies in alternating semesters, according to the company's attorney, Douglas Thompson.

Before he finished his latest work cycle at SDRC and returned to Purdue at summer's end, Barrick is believed to have illicitly copied Supertab 7.0, whose price ranges from \$50,000 to more than \$1 million, Thompson said.

He then offered to sell the resulting object and source code tapes — as well as their accompanying program manuals — to Anamet for \$34,000,

according to FBI press spokesman Frank Daniel.

Software Developers

Both Anamet and SDRC are consulting firms and, to a lesser extent, software developers specializing in structural engineering jobs. Anamet's vice-president, Richard Citerley, characterized the two companies as direct competitors, but Thompson disagreed.

Although it has recently created some software packages that "might be construed as being competitive" with SDRC's products, Anamet is more of a consumer of engineering analysis and modeling programs than a developer, Thompson said. The reverse is said to be true of the Ohio company.

Barrick's alleged efforts to sell Supertab to Anamet led him eventually to call Citerley for the first time on Aug. 10, Daniel said. Citerley then reported the overture to SDRC, which in turn informed the FBI.

In an effort to abort the proposed theft and trap its would-be perpetrator, federal investigators approached Citerley and persuaded him to play along with Barrick in his alleged scheme and keep them abreast of his actions.

Two Transactions

Barrick's involvement with Anamet was reportedly marked by two main transactions. In the first, he mailed Citerley two SDRC program manuals and a reel of magnetic tape containing Supertab 7.0's object code. In the second, about two weeks

later, he sent Anamet another batch of tape purported to contain the modeling package's source code, Citerley said.

Partly because of their proprietary nature, all the stolen program materials were immediately confiscated by the FBI, Thompson added.

A few days after the tapes and manuals reached their destination, Barrick allegedly flew here from the Midwest for a scheduled meeting with Citerley. But instead of consummating the deal and receiving the promised payment for the stolen materials, he was arrested by waiting FBI agents and charged with one count of transporting stolen goods across state lines.

That particular offense carries a maximum penalty of 10 years in federal prison or a \$10,000 fine — or both, Daniel said.

Barrick's alleged entanglement in the Supertab theft scheme abruptly ended his three-and-a-half year participation in the SDRC co-op student program, which gives university undergraduates an opportunity to gain practical work experience. The program exposed him to a wide variety of technical tasks, one of which was to fix bugs in SDRC's programs, and gave him ready access to Supertab's latest release, Thompson said.

Taking advantage of his privileged position, Barrick was apparently able to duplicate Supertab's master source code tapes without his employer's knowledge, the attorney speculated. None of the master tapes, which are kept under lock and key, has ever been reported missing.

How do you spell relief from the pain of Documentation? (S-Y-D-O-C.)

Call (201) 568-9700.

Cut your COBOL
Maintenance
costs.

syncsort
INC.

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

QUESTION: Which is a bigger headache? The COBOL-documentation problem or the high-cost-of-maintenance problem?

ANSWER: Both.

* * *

We're not kidding. Documentation and high maintenance costs are both parts of the same big headache. Here's why:

1. THE PROBLEM BEGINS WITH DOCUMENTATION:
And it begins right at the program-development stage.

Most programmers hate to document. And although they may think they are producing well organized programs, they really have no way of judging. If they produce badly organized programs, they will inevitably produce badly organized documentation, too. One always equals the other.

2. BAD DOCUMENTATION LEADS TO COSTLY MAINTENANCE: Even if the documentation started out being accurate, it's probably never been updated. When modifications occur, someone's got to go back and attempt to divine the underlying logic before new code can be inserted. A long and costly operation.

No wonder COBOL maintenance may consume as much as 75% of your entire budget!

FAST RELIEF WITH SYDOC: Our Structured Documentation System takes the documentation problem off the shoulders of your programmers and puts it where it belongs—on the computer:

• **SYDOC HELPS YOU DEVELOP STRUCTURED PROGRAMS.** It not only provides structured documentation, it is also a very useful guide for the production of structured COBOL programs. Flaws and inconsistencies can be spotted at the development stage. And corrected before they start driving your maintenance costs up.

As a manager, you will—for the first time—have a tool to standardize both your documentation and the quality of your programs.

• **SYDOC MAKES IT EASY TO MODIFY EXISTING PROGRAMS.** It can analyze "orphan" programs without adequate documentation and tell you everything you need to know about the program's structure, logic, variables and relationships. Armed with this knowledge, the maintenance problem shrinks.

No longer is it necessary for skilled programmers to spend days searching for clues about the program's logic. SYDOC makes all necessary information available quickly and easily.

But the best way to find out about SYDOC is to try it. If this remedy doesn't work you'll just have to try another—A-S-P-I-R-I-N.

Power Company Short-Circuits Meter Thieves

By John Gallant

CW Staff

NEW ORLEANS — Electricity thieves beware; the long arm of the law now has an even longer reach, thanks to a computerized detection system designed to expose Louisiana Power and Light Co. (LP&L) customers who tamper with their electric

meters.

According to company spokesman James Fort, when customer payments are processed through the IBM 3081 mainframe operated by Middle South Services Co., a division of Middle South Utilities, Inc., the computer system automatically alerts authorities to those customers whose

bills have dropped significantly over a period of two or more months.

Middle South Services provides computer services to the parent company's subsidiaries, which include the Louisiana, Arkansas and Mississippi power and light companies, and New Orleans Public Service Co.

LP&L began the pilot program in the neighboring towns of Chalmette and Arabi, La., last year. Though Fort would not comment on the number of power thieves apprehended, he said the program was so successful the company has expanded it to include the 85,000 LP&L customers in the Algiers-Gretna district of New Orleans. After reviewing the results found in that area, LP&L may widen the scope of the detection system to include metropolitan New Orleans within the next year, according to Fort.

"This system has proved to be quite effective in ferreting out customers tampering with their meters. It's really helped us in prosecuting those people who are abusing the system. The program shows a great deal of promise," Fort said.

Fort compares the theft of electricity to shoplifting in a retail store. While he would not estimate the amount of electricity stolen each year by meter tamperers, he said the price of electricity must be increased to make up for the loss.

"Meter tampering has certainly affected costs. The loss eventually winds up affecting other consumers. It's like the situation at any depart-

ment store; the pilferage ups the prices to other customers."

According to Fort, the illegal practice is also punishable with fines ranging from \$500 to \$1,000 and up to a year in prison.

If a customer's bill drops for just one month because the family is away on vacation, for example, the computerized detection system will not flag the payment record. The program is designed to alert LP&L officials only to those consumers whose bills drop substantially for a period of two or three months or more.

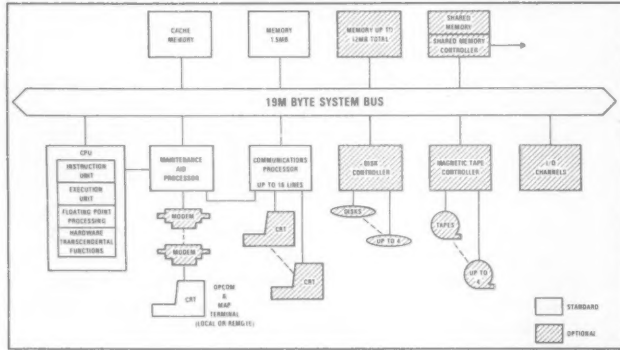

Once alerted, those officials confront offenders with the evidence. Fort said that violators are usually more than willing to pay the amount the company estimates they have stolen, rather than face prosecution.

"We usually add up what we believe was stolen, plus the cost of the investigation and any amount of damage to our equipment. If they don't agree to pay the costs, we'll file suit. But, we rarely have to do that," Fort said.

LP&L began the computerized detection program in an effort to stem the growing incidence of electricity theft.

The company still monitors meter tampering in other districts with what Fort described as a fairly sophisticated investigative system involving meter readers and specialists, but he admits the new computerized system allows LP&L to accomplish a great deal more.

Harris 1000 Geared Toward Science, Business Markets

Harris 1000 System

Harris Corp. Chart

(Continued from Page 1)

served for use in supercomputers. These circuit integration and packaging technologies have enabled the company to build 60,000 logic gates and 1 million static random-access memory (RAM) bits into a single CPU card, a spokesman pointed out.

Another factor contributing to the Model 1000's increased overall performance is the hardware implementation of virtual memory and transcendental functions in the CPU, the spokesman said.

The 1000's demand-paged virtual memory totals 48M bytes. The CPU has one virtual address register for each page to track the virtual-to-physical memory relationship for every page, a spokesman stated. This implementation results in virtual memory benefits without the performance drawbacks associated with software virtual memory.

Hardware-implemented transcendental functions in the CPU include sine, cosine, tangent, arc sine, arc cosine, exponent and logarithm. All of these functions are directly supported by the firm's VOS operating system and its Fortran compiler.

Also implemented in the 1000's hardware is 32-bit single precision, 48-double precision, 64-bit triple precision and 96-bit quadruple precision. Users have the option of selecting the precision needed for particular calculations without incurring any performance degradation, a spokesman related.

Complementing the CPU is the Maintenance Aid Processor (MAP), a microprogrammed processor that controls power-up diagnostics and runs checks on memory, I/O channels and CPU data paths before loading microcode each time the system is powered up. The MAP also carries out local or remote system maintenance.

Another processor, the Communi-

cations Network Processor (CNP) is a standard component in the 1000 and controls communications through asynchronous, synchronous, bi-synchronous and Ansi X.25 protocols. A single-board CNP supports up to 16 communications lines for either local or remote device connection. As many as 14 CNPs reportedly can be configured with the 1000.

The system's soft control store feature allows the CPU's microcode for instructions to be implemented in RAM instead of its more traditional residence, programmable read-only memory. This feature allows users to integrate enhancements by distributing new microcode instead of field upgrading via CPU boards.

The 1000 model uses the company's recently introduced Integrated Memory Subsystem, which contains the memory controller and 1.5M bytes of memory on a single board for both main memory and shared memory. Also part of the subsystem is the company's Integrated Disk Controller, which combines the functions of an I/O and disk controller.

The CPU is housed on 10 printed-circuit boards and fits into a single 19-in. cabinet with memory and I/O placed in a second cabinet. In this arrangement, up to four peripherals can be installed.

Priced at \$250,000, the basic configuration of the 1000 is made up of the CPU with 6K bytes of cache memory, 16 external interrupts, a line frequency clock and an internal timer, 1.5M bytes of memory, one CNP with an operator's console port, a CRT terminal as an operator's console and MAP terminal, the VOS operating system and dual cabinets.

Initial shipments of the 48-bit system are slated for early next year, the company said from 2101 W. Cypress Creek Road, Fort Lauderdale, Fla. 33309.

DP Degrees May Not Prove Enough for Big Bucks

By Katherine Hafner

CW Staff

INDIANAPOLIS — Unless accompanied by a good dose of experience, a degree in data processing may not be worth its weight in parchment.

That is the conclusion of a recent salary survey by International Computer Programs, Inc. (ICP), which found that a DP professional with a high school diploma and several years of experience is paid as much as, if not more than, a colleague with a bachelor's or master's degree.

"A professional's experience seems to be the winning ticket, even in management positions," ICP President Larry Welke said. "While a computer science student takes time to complete the academic requirements for a degree, others are out in the business world acquiring experience and being well compensated for it."

According to Welke, the reason that advanced degrees are not as stiff a requirement in DP as in other fields is that current curricula do not properly prepare students to enter the profession.

"Universities cannot compete with DP salaries in the business world," Welke explained. "To tempt the best and brightest in the working world into academia is a

supreme challenge."

The survey's statistics were compiled with personnel information provided to ICP by its 220-member companies.

The survey also found that DPs in the East are paid considerably more than those in the Midwest. Regional salary statistics compiled by ICP reveal that a DP manager in the East makes an average of \$73,980, while his Midwest counterpart makes \$57,743.

Below DP managers are systems development managers. Those in the East make an average of \$59,533, while those in the Midwest make \$47,195.

At the bottom of the heap fall programmer trainees; those in the East make \$18,349, while trainees in the Midwest average \$16,231.

According to the survey, yearly salary increases, which have traditionally been high, have dropped from a 10% to 15% increase to a 5% to 10% increase.

Turnover, too, has slowed from 20% to 30% in recent years to 10%, according to the survey. ICP attributed this to "the reluctance of DP professionals to change jobs in an inflationary environment."

The survey is available to ICP member companies from ICP, 9000 Keystone Crossing, Box 40946, Indianapolis, Ind. 46240.

System/36 First User Satisfied, But Waiting

By Ed Scannell
CW Staff

MONTPELIER, Vt. — One of the first users of the System/36, IBM's long-awaited upgrade to its widely used System/34, reported that the delivery and installation of its system went smoothly.

And based on benchmark tests, Vermont Mutual Insurance Co. is looking forward to the system that will eliminate the throughput and storage crunches currently burdening its two System/34s.

The reason Win Perron, DP manager for Vermont Mutual, is still looking forward to his 12-week-old System/36 solving his problems is IBM's failure to deliver proprietary machine instruction code necessary to develop a compatible data base management system (DBMS). Without the DBMS, which is Cincom Systems, Inc.'s Total, Perron is unable to convert his library of System/34 software so it will run on System/36.

Half Dozen Others

According to Richard French, product manager at Cincom, there are a half dozen other firms besides Vermont Mutual waiting for IBM to release the necessary code. French said IBM signed an agreement with Cincom two weeks ago, agreeing to deliver the code, but has yet to receive the code. French added, however, that IBM sent a letter of confirmation last Tuesday, telling Cincom it would have the necessary code in hand by Sept. 29.

French suspected that the late delivery of the code is due to the usual bureaucratic tangle rather than IBM's decision, made last February [CW, Feb. 28], to restrict or eliminate program materials from certain of its licensed programs. That policy was scheduled to take effect Sept. 1.

"It could very well be," French said, alluding to the possibility that IBM's delay in delivering the code is an implementation of its new policy. "I remember we had to fill in all sorts of forms to get to use it," he said.

Asked about the delay, an IBM spokesman said the code's documentation review process was taking longer than expected, but said he thought IBM would "forward all of the material Cincom requested within the next 24 hours." He added that IBM's longer-than-expected delivery of the code has nothing to do with its decision to restrict source code.

"We do have a new policy with source code, but I am told that Cincom did not need and did not ask for source code material. They were requesting access to the privileged instruction set, and that is not part of the source code."

Perron said it was his understanding this code would be delivered along with the system. "This [lack of code] has been a problem in the past, but I was led to believe it wouldn't be this time. It has caused a slight delay in our conversion to the 36," he explained.

While he has been waiting for delivery of the code, Perron said he has been using the System/36 to run financial assistance systems such as stocks-and-bonds portfolios, but "nothing tying the main systems together."

Ron Grant, president of Systems Assurance Corp., the company that developed all of Vermont Mutual's applications software, said IBM's failure to deliver the proprietary code involves usual bureaucratic tangles and issues of security. Grant said IBM's concern about the code falling into the hands of plug-compatible manufacturers, particularly the Japanese, is legitimate, but it is a problem that should have been resolved some time ago.

"There is a valid area for concern, but it is one of those things they could have resolved in an hour any time during the past year. They provided me with assurances a year ago that they would address this properly," Grant said.

According to Grant, IBM has made an agreement to resolve the problem and has appointed someone to address it. He added, however, that IBM has been promising to resolve the problem "in a week or two for the past several months."

Perron said he was apprehensive about being a pioneer user of the System/36.

"Experience tells you that you don't want to be the first kid on the block [to buy a system], but I was torn by the fact that I was outgrowing the machines. I had to be a much earlier recipient than I normally would want to be," Perron said.

Aside from the tardy software, everything connected with the system's delivery and installation went

smoothly, Perron said. He said the system was so easy to configure and power up that the presence of IBM personnel was not necessary.

When evaluating potential upgrades for the System/34s, Perron said he wanted to stay with a mini-type system rather than a mainframe because of the unexplored potential he feels minicomputers have. "I think their potential resources haven't been tapped. Therefore, our intention always was to stay with a mini-type system."

Looking back, Perron said he is happy with his decision to go with the System/36 and would only do one thing differently. "I would have it written in blood that IBM give me that code earlier," he said.

A new guide to computer security from Yourdon Press.

Computer security is on everyone's mind lately, and no wonder. Today's computers play a vital role in the day-to-day operations of an organization. They process and store information that is as valuable an asset as cash, personnel, or equipment. An asset that if lost, could paralyze a company.

Building Controls into Structured Systems, by Alan E. Brill, offers a strategy for injecting internal controls into both new and existing systems. Brill introduces two practical tools that managers need to assure the accuracy, completeness, and security of a system's data.

- One tool, based on a simple decision tree, is used during analysis. It identifies appropriate controls for particular applications, in either structured or unstructured projects.
- The other tool, *phase-related control (PRC)*, tells you during which systems development phase to build each type of control.

Building Controls into Structured Systems is a must for every DP professional, user, and auditor. Valuable corporate assets deserve the protection of internal controls. The survival of your organization could depend on it.

ISBN: 0-917072-27-8; \$22, softcover

"AI's book should be read carefully by members of the auditing profession and by members of the DP profession — and also by users who pay for computer systems to be built in the first place."

— Ed Yourdon

DEC Seen Confronting IBM's XT Rainbow 100+ Bows With Special Service Plan

By David Myers

CW New York Bureau

NEW YORK — In what is seen by some as an attempt to dress up its image, Digital Equipment Corp. unwrapped a stepped-up version of its personal computer and announced a buyer's protection plan here last week.

In a news conference here, the Maynard, Mass.-based computer vendor introduced the Rainbow 100+, a small computer with a 10M-byte Winchester hard disk backed up by two floppies. At the same time, the company announced a warranty plan giving retail buyers a year's worth of protection and corporate buyers 90 days' worth.

"We are becoming the tough marketers many of you said we must be," Edward A. Kramer, vice-president of corporate marketing, said.

In other developments, DEC said Microsoft, Inc.'s MS-DOS and Digital Research, Inc.'s CP/M 86/80 operating systems, as well as Lotus Development Corp.'s Lotus 1-2-3 financial spreadsheet, would be available later this month on the small computer and noted that a Unix Version 7 would be available later this month for its Professional series microcomputer.

Industry insiders pointed out that the version of DEC's personal computer is directly slotted against IBM's Personal Computer XT. Along with the new IBM-like service plan, the decision to go head to head with IBM's XT betrays DEC's desire to establish itself as IBM's primary competitor in the personal computer market, some industry observers said.

"I see [last week's announcements] as DEC's way of differentiating itself from the others in the tier of companies below IBM," Frederic H. Cohen, an analyst at Rothschild, L.F. Unterberg, Towbin here, said. He named Hewlett-Packard Co., Wang Laboratories, Inc., Data General Corp. and "maybe" Apple Computer, Inc. as the other companies in the "second tier."

Other consultants and analysts agreed that the timing and style of

the announcements overshadowed what was actually announced.

"It is important in the overall face-off that is coming down to IBM and DEC anyway. It provides the image which IBM has established already and which DEC must establish if they are going to compete effectively," George J. Weiss, director of computer systems studies for Quantum Science Corp. here, said.

Weiss called last week's announcements a "facial uplift" for the company.

"They sure do need one," Marc G.

Schulman, an analyst at First Boston Corp. here, maintained.

"Here's a company that grew up in the cold scientific and engineering world. They never seemed to understand that if you're going to succeed in personal computers, you need a little flash and hype," Schulman said.

For the most part, consultants and analysts were not awed by the technological advances of DEC's personal computer version.

"Were there any technology surprises? No. I thought Lotus might

come in under CP/M, and it did not," Cohen said. DEC said the spreadsheet package created by Cambridge, Mass.-based Lotus, available later this month, will run under MS-DOS.

"It's a system combining user expectations for additional power and capability. It's not something radical and earthshaking, but it shows a commitment," Weiss agreed.

Aaron Goldberg, research manager for information systems at Framingham, Mass.-based International Data Corp., called the latest Rainbow a very attractive computer at "quite a low price. It gives people an alternative to IBM," he said.

DEC said the latest version of the Rainbow personal computer is aimed at small to mid-size businesses and corporate managers. It holds 128K bytes of main memory and runs MS-DOS and CP/M 86/80 operating systems at \$250 extra.

Schulman said his calculations showed the Rainbow — with the dual operating system option and a printer added on — would sell for about \$7,020, while the comparable array from IBM would cost \$7,094.

DEC lists the computer at \$6,295, including keyboard and monitor. The company also said it is offering a 10M-byte hard disk upgrade kit at \$2,995 for its original Rainbow 100, which retails for \$3,495.

In a prepared statement, DEC described the Rainbow 100+ as equipped with "[Zilog, Inc.] Z80A and [Intel Corp.] 8088 microprocessors, a 10M-byte Winchester hard disk, a dual floppy diskette with 800K-byte capacity, [synchronous/asynchronous] communications, built-in terminal emulator, printer port and 128K bytes of system memory."

The system will also permit the mounting of a 256K-bit chip on board, "allowing you to get 900K [bytes] out of the memory. That meets most present-day user requirements," Weiss said. Use of the Lotus package requires 256K bytes of memory, DEC cautioned.

DEC is headquartered at Maynard, Mass.

DEC's Warranty Perceived As Boon to Small Business

NEW YORK — The warranty plan announced here last week by Digital Equipment Corp. may not sway corporate managers from buying IBM Personal Computers, but for small businesses and home users it might just be enough to clinch the sale.

That is the consensus of opinion in the wake of DEC's announcement that retail buyers of the manufacturer's personal computer will be guaranteed one year of on-site service. Corporate buyers are guaranteed for 90 days.

"There is probably no other company in the business that can think about doing this," Joel Schwartz, small systems group vice-president, said at the press gathering where the plan was made public.

George J. Weiss, director of computer systems studies for Quantum Science Corp. here, said the warranty is "a direct challenge to IBM's service mystique."

The warranty, called the Investment Protection Plan, includes a one-year guarantee covering all software and optional add-ons purchased with the DEC system. In addition, buyers are offered a year's use of a toll-free telephone

number to call in times of trouble.

A 30-day money-back return policy expires Jan. 31, 1984.

IBM's Personal Computer warranty is a three-month plan requiring the purchaser to return the equipment to the store. Software is not covered under the plan.

DEC dealers said their warranty plan would increase sales of the Maynard, Mass., company's personal computers.

"No other company does anything like that. It's the best way to get a computer and get started with it," Philip A. Boerger, vice-president of business products at Berliner Computer Centers here, said.

One dealer compared the on-site warranty to an auto maker's promise to make any repairs in the buyer's driveway.

For corporate buyers, however, the warranty is expected to have less of an impact.

"If you were going to buy IBM, this won't sway you. But if you were going to buy DEC anyway, this works as a discount," Frederic H. Cohen, an analyst with Rothschild, L. F. Unterberg, Towbin here, said.

MCI Takes Wraps Off Electronic Mail Service

(Continued from Page 1)

7,500-char. message costs \$6. The recipient can be in any of 20,000 continental U.S. cities, and MCI promises to complete delivery by noon of the following day.

For \$2, MCI, after transmitting the message to one of its 15 terminating cities, will deliver it via the U.S. Postal Service.

In most cases, there will be no additional charges.

A spokesman for Federal Express Co., which offers a service that competes directly with MCI's new offering, maintained that "we've always anticipated" competition; he took the position that his firm's service is designed to be "superior and extremely competitive with anything else being offered." He noted that MCI is "talking about transmission

of data; we're talking about transmission of images. They're talking about involving other parties, such as Purolator and first-class mail... we've involved only our own employees."

The MCI service, accessible through a dial-up local telephone call, interfaces with any personal computer that has an asynchronous 300 or 1,200 bit/sec communications interface, said J. Robert Harcharik, president of the new subsidiary. A variety of communicating word processors and low-speed terminals can also be connected, along with telex machines, Harcharik added. Word processors reportedly compatible with the service include some or all of those made by Lanier Business Products, Inc., Wang Laboratories, Inc., Xerox Corp., IBM and Digital Equipment Corp., Harcharik ex-

plained.

Every MCI Mail subscriber, regardless of his terminal type, receives a telex number, and he can both send and receive domestic and international telex messages through the network. The question of whether to add a facsimile machine interface is still under consideration, he added.

The U.S. Postal Service charges \$9.35 for overnight delivery of a 3- to 5-page message, and private courier service rates are approximately the same or higher, according to Harcharik. Contending that MCI Mail is 30% to 50% cheaper, he maintained that underpricing the competition will enable MCI Mail to tap a new market comprised of "hundreds of thousands" of subscribers.

Although this market consists

largely of home computer users, it also includes companies. MCI Mail has two features designed especially for this latter group. Letterheads, signatures, invoice and other business form formats can be stored within the system — and accessed automatically — for \$10/year. Also, a user who wants to address letters on a recurring basis to a specified group of recipients can store their names and addresses within the system for \$10/mo.

The growing use of personal computers, the growing need for transmitting time-sensitive messages plus new options will expand the market for the new service, Harcharik said. One upcoming option would be bulk rates for mass mailers which will reportedly be offered "in a few months."

Three Firms Charged T/S Service Subject of \$53 Million Lawsuit

By Jim Bartimo
CW Staff

LOS ANGELES — Claiming the time-sharing services they contracted for were never properly rendered, a real estate management company and a retirement community here have filed a \$53 million breach of contract suit against McAuto Systems Group, Bradford National Corp. and McDonnell Douglas Corp.

However, at least one of the defendants has denied responsibility for the alleged loss of service. In a statement released to *Computerworld*, Bradford National, a diversified financial services provider, said it is initiating a separate lawsuit objecting to any alleged wrongdoing and charging one of the principals in the real estate management company with the illegal taping of telephone conversations.

When contacted recently, McAuto, McDonnell Douglas' time-sharing subsidiary, refused to comment on the case. However, the legal volleys between defendants and plaintiffs will probably come before the court sometime next year.

Golden Rain Foundation, a retirement community in Laguna Hills, Calif., and its management, Professional Community Management, Inc., contracted with Bradford National's time-sharing branch in 1981 for general ledger, accounts payable, accounts receivable, fixed assets and investment management applications. "In late 1981, we had massive defects in the system design and found fraudulent status reports," Anthony C. Ligoretti of Professional Community Management said. "It took us months to process one month's accounts."

Upon further investigation, Professional Community Management allegedly found that many of the specific programs it needed were not written, although reports from Bradford National indicated progress was on schedule. "We found that programs were untested or unwritten; there was a really good cover-up job," Ligoretti continued.

Still more problems arose when Bradford sold its time-sharing sub-

London to Host Info Meet Dec. 6

ABINGDON, England — The Seventh Annual International On-Line Information Meeting will be held Dec. 6-8 at the Cunard International Hotel in London.

Sponsored by Learned Information Ltd., the main event of the meeting will be the conference, which will feature papers covering major aspects of on-line information retrieval. Subjects will include downloading, full-text data bases, microcomputers, in-house information systems, chemical substructures, education and training, electronic publishing, data base industry and videotex.

Further information is available from Learned Information, Besselsleigh Road, Abingdon, Oxfordshire OX13 6LG, England.

subsidiary, Bradford Administrative Services, Inc., to McDonnell Douglas. "When they got sold to McDonnell Douglas, [Bradford] didn't tell [McDonnell Douglas] about our contract. The first comment from McDonnell Douglas was, 'Who are you guys?'" Ligoretto said.

Bradford Charges

In its statement, Bradford charged that Professional Community's "inability to decide upon and communicate its specific needs of the data processing system, as well as its inability to retain the manpower necessary to convert data, created hardship for Bradford."

Bradford did not answer charges that it withheld information from McAuto during the sale of its time-sharing subsidiary, but said it "observes that the alleged incompletion of contract occurred after McDonnell Douglas purchased the contract, in 1981, as part of [Bradford's] former systems division."

Although Ligoretto denied that a suit has been filed, Bradford also said it has "initiated a separate lawsuit . . . to recover statutory damages for violation of California law prohibiting illegal tape recording of telephone conversations. This surreptitious taping of telephone conversations between Professional Community

Management and Bradford employees was initiated by Professional Community Management through one of its officers, Anthony Ligoratti."

Professional Community Management is now performing its accounting manually while it awaits a trial. Last July, the Central District Court of California struck down a request from Bradford National that Professional Community Management's case be thrown out of court.

The damages of \$53 million include out-of-pocket expenses to investigate the allegedly unwritten programs and direct and punitive damages.

Supercomputing Seen Key to Economic Success

By Jake Kirchner

CW Washington Bureau

GAITHERSBURG, Md. — The so-called "supercomputer race" is not just a contest for national technological supremacy; it is a struggle to ensure the U.S. future economic success, according to Dr. Ruth M. Davis, former director of the National Bureau of Standards' Institute for Computer Sciences and Technology (ICST).

"We're losing sight of the fact that we need supercomputing for entirely different objectives than technology," Davis said last week. "The race we're really in is between countries, not for supercomputers, not for national security. . . . We're in a race to control the resources of the world, both natural resources and informational resources."

After leaving her ICST post in 1977, Davis served in the U.S. Department of Defense (DOD), where

she initiated the current DOD Very High-Scale Integrated Circuit Program, and the U.S. Department of Energy. She is now president of Pyramiding Group, Inc., a technology management corporation.

She made her remarks on supercomputing at last week's conference here of ICST and the Federation of Government Information Processing Councils. Reviewing the current U.S. projects on supercomputing, Davis noted there are a number of separate but related programs in both government and the private sector.

"There is a very close bond" among the initiatives begun in the last five years, she said, such as those of DOD's Advanced Research Projects Agency, the National Science Foundation, the Department of Energy and the National Aeronautics and Space Administration. There are other government programs, of which she suggested "it's worth coalescing

a lot of the government efforts that are less than critical mass" into a more coherent program.

In the private sector, she singled out three undertakings that are likely to have "enough critical mass" to contribute to supercomputer development. The research plans of Microelectronics and Computer Technology Enterprises, the 13-firm research and development consortium founded by Control Data Corp. (CDC) Chairman William Norris, could lead to "a superb set of technologies that are feeder technologies into the supercomputing world," she said.

The Semiconductor Industry Association's Semiconductor Research Corp. "hits the bottom end of that pipeline from research to market-place products" by supporting universities and research institutions, according to Davis. Of the new CDC supercomputer spin-off, ETA Systems, Inc., Davis suggested CDC

technology and financial support, plus the entrepreneurial approach of the new firm, may or may not prove successful. But, she added, "I am 100% supporting it."

Addressing this broadened and intensified drive to promote supercomputer development in the U.S., Davis noted that a number of recently and almost-completed studies on the subject have come up with a "commonality of recommendations." These include government funding, guaranteed government purchases of supercomputers and an interagency coordinating committee.

A guaranteed market for future supercomputers is essential, Davis said, noting estimates of a combined U.S. and Western European government market of as many as 100 to 120 supercomputers. Although she did not directly endorse a recommendation that the U.S. government buy the first three of any new supercomputer, Davis did say that "I don't know what the industry can realistically do if it has to take all the front-end risks and the down-side risks."

Among her other concerns, she said, is that "we're looking at the supercomputing area as a race. . . . That may have totally obscured the real problem. For example, I'm not sure what the finish line is. I'm not sure how to tell when we have won the race or lost the race." According to Davis, computers will never be fast enough. "It's like high-energy physics: If we're there, it ain't high energy; if we're there in computers, it isn't supercomputers."

The real object is not to advance technology, but to be able to control the discovery, development, management and dissemination of natural and information resources, which can only be done with computers, she said.

In trying to reach that goal, the U.S. needs to help the research community and make some sense of current methods of government/industry cooperation, which she described as currently "back door." The economy is no longer rife with robber barons that require government control, she said, stating that we need a "much stronger emphasis on legislative reform . . . to reflect this U.S. government/industry change."

Tops Nuclear Proliferation

Privacy Ranks High in Canadian Concerns

By Jake Kirchner

CW Washington Bureau

LONDON, Ont. — A recently published survey of 210 Canadian households found that personal privacy is of greater concern than the spread of nuclear weapons. Most worried of all were those with knowledge of electronics, the survey found.

The study, conducted for the Ontario Ministry of Transport and Communications, found that although Canadians are more worried about inflation, unemployment and crime in the streets than privacy, the respondents rated privacy more important than freedom of speech, freedom of the press, sexual equality and minority rights.

"Concern for privacy is very high," reported the study's author, Prof. Neil Vidmar from the Department of Psychology at the University of Western Ontario.

"Sixty-eight percent of the people interviewed believe Canadians have less privacy than [they did] 10 years ago, and 62% indicated they are concerned about threats to their personal privacy," the study said.

"People are concerned about how government uses the personal information it collects about Canadians, but they trusted private business even less," according to the poll results. "There is a widespread belief that many public and private organizations collect more information than is necessary."

Whereas more than one in four Canadian households reported they were victims of significant privacy invasions in the past 10 years, a far greater number said they expected to be victims in the next five years. The study said that 55% expected the invasion to come from a computer or data bank, 58% from a credit rating agency, 51% from an insurance company, 52% from the federal government and 50% from a bank.

"People who reported knowledge of microelectronics technology were those most likely to anticipate the likelihood of a privacy invasion," the

report stated.

The study was prepared in conjunction with a research project on privacy in two-way cable television services. The opinion poll found that "people are generally enthusiastic about many of the services that could be provided by two-way cable television, but they are concerned about potential privacy violations due to the amount of personal information that could be compiled by cable companies."

Seventy-two percent of those polled said cable TV company data collection should be regulated by government; only 17% trusted the companies to regulate themselves. "Overwhelmingly, people believe that cable companies should tell subscribers what information is being collected about them and that written permission from individuals should be required before any data can be collected," the study said.

"In fact," it said, "there is substantial support for the proposition that the collection of identifiable personal information by cable companies should be forbidden."

BOSTON — Aiming to help understand the social implications of emerging technology and to assist in the formation of national policy in this area, the Center for Technology and Policy at Boston University opened its doors this month.

Under the direction of Dr. J. Herbert Hollomon, the center hopes to achieve these goals through research, report writing and consulting and the development of an educational program that will consist of workshops and degree programs.

According to Prof. Gerald Gordon, co-director of the center, one of the characteristics that makes the center at BU different from other recently established technology-oriented research centers is the mix of people involved there.

The main study in the project, titled "Protecting Privacy: Data Protection in Two-Way Cable Television Services," noted that the systems will involve "the production and collection of a great deal of personal information about subscribers and other users."

This, according to the study's author, Prof. David H. Flaherty, who teaches history and law at the University of Western Ontario's Privacy Project, "has the potential for becoming a significant barrier to consumer acceptance of such services, if concerns for privacy are not alleviated in advance."

Flaherty recommended that Canadian cable TV companies and the Canadian Cable Television Association adopt privacy guidelines similar to those already adopted by some firms in the U.S. These guidelines, such as those recently promulgated by the U.S. Videotex Industry Association, call for disclosure of record keeping practices, strong security measures and nondisclosure of personal information without advance authorization [CW, July 11].

University to Study Social Effects of Tech

"The problem with academic settings, for the most part, is that very often you have people that don't know what's going on in the real world. . . . We have people who have worked in the real world, in universities, people who have been in senior policy positions, people from government . . . scholars," Gordon said.

The center at BU also has a charter that states that "the center has the right to develop graduate courses and to be an integral part of the university rather than a peripheral unit," Gordon said.

According to John Hansen, assistant professor of research and technology, the mandate of the center includes developing a master's degree level program.

"Though the shape of the program hasn't been formed yet, it might begin sometime next fall with course offerings related to technology management, teaching innovation, policy analysis and science and technology policy. The program will be for people interested in technology, technology policy and management of technology, whether these individuals presently work in the field or they're students interested in those fields."

Some of the areas of research that will be examined at the center are the effects of factory automation on workers and management, the implications of technology on social policy, the impact of computers on manufacturing and forecasting technical labor markets.

IBM® MARKETS INTELLECT.™

As appeared in
BUSINESS WEEK,
July 11, 1983

The world is taking note of IBM's recent decision to market INTELLECT, Artificial Intelligence Corporation's English Language Information System. It is the first time IBM has come to an independent software vendor for mainframe business professional software. This important decision recognizes artificial intelligence as an important technique for solving business problems—one that companies can benefit from right now.

The reasons why IBM has chosen INTELLECT, the only commercial product of its kind, are obvious. To use INTELLECT, all you do is type in questions in ordinary English, phrased any way you want. For instance, you can type "SHOW ME A BAR GRAPH OF THE ACTUAL AND ESTIMATED YTD SALES IN EACH REGION" and INTELLECT immediately transforms the raw data in the database to finished color graphics. It's a live, dynamic interface that fully integrates your existing database and graphics systems.

Already at work in more than 150 installations, INTELLECT has proven itself virtually indispensable in an information center environment. It is capable of a wide variety of applications, including marketing, finance, personnel, manufacturing and banking.

INTELLECT is spearheading one of the most significant trends in the future of business computing. Clearly, this is something every data processing professional should know about. You can learn more about INTELLECT by attending one of our seminars held

nationwide, or by putting its amazing power at your fingertips in minutes with one of our demonstration tapes. Use the coupon below, or call us today. Like IBM, we think you'll be impressed with INTELLECT.

I'd like to learn more about INTELLECT.

Sidereal Takes Wraps Off Multiuser Info System

By Jeffrey Beeler

CW West Coast Bureau

SAN DIEGO — Up to 12 communications lines, protocols and interfaces can be supported simultaneously with a multiuser office information system introduced here last week by Sidereal Corp. at the Tele-Communications Association (TCA '83) conference.

The management of Micronet 85's data communications activities takes place in the background and thus remains entirely transparent to the system's users, a spokesman said.

In addition to performing all the necessary speed, protocol and code conversions automatically for a multiline system, Micronet 85 boasts a user interface reminiscent of Apple Computer, Inc.'s Lisa personal computer.

The Micronet Operators' Environment interface provides users with six global commands and a series of screen-displayed icons that represent familiar office fixtures such as filing cabinets, folders, documents and in-baskets. By selecting the right combination of icons and global commands — which include Open, Close, Move, Copy, Delete and Execute — users can perform practically the full spectrum of file maintenance and communications functions.

The use of a Lisa-like interface minimizes the need to enter long command sequences, simplifying user training and making Micronet 85 easy for a nontechnical office worker to operate, he said.

Like Lisa, the Sidereal system reportedly allows multiple windows to be displayed on one screen at the same time, with each window capa-

Voice, Data Fight Forcing Merger?

(Continued from Page 1)

Angeles-based California Federal Savings and Loan. "But the technology will bring them together."

One communications manager said the voice will become the dominant technology simply because of its mass use. "Eighty percent to 90% of all communications is voice," said Thomas D. Graham of the Communications Systems/Information Systems Department of Rockwell International Corp. of Anaheim, Calif.

But another manager of voice communications at a major insurance company disagreed. "The data side will take over voice because they have been keeping up with education; in my company, data gets all the money they need for education, while I'm hand-training my operators."

The telecommunications manager also said that the bitter battle will not be settled for at least 10 years. "Our voice and data people aren't going to merge very easily," she said.

But Robert Justham of telecommunications planning in California's Department of Motor Vehicles is already planning for the integration of the two networks. "Our concept is to have voice and data in the same [departmental] unit," he said. "With the divestiture of AT&T, we're forced to create our own voice network."

CW at TCA '83

ble of independently executing a different application. Because the system's standard application packages are all integrated, data can be automatically transferred from one window to any other, the source said.

Micronet 85 is built around a Motorola, Inc. 68000-based controller that supports up to four workstations through a coaxial cable link. Using the controller, each workstation has equal access to a common disk system, up to five shared printers and a maximum of 12 communications

lines, the spokesman said.

As many as 256 controllers can reportedly be tied together either remotely, through a High-Level Data Link Control (HDLC) protocol, or locally, through MIC-Link, Sidereal's local networking facility. The HDLC protocol allows the workstations to be installed as far as 1,000 feet from the nearest controller.

Expected to compete directly with office information systems from companies such as Fortune Systems, Inc. and Convergent Technologies, Inc., Micronet 85 operates with M-Stos, Sidereal's Unix look-alike operating system.

Micronet 85 is said to support a wide variety of communications capabilities and facilities, including:

- The major electronic funds transfer networks used by the banking industry.

- All the protocols required for telexing and interfacing with international record carriers.

- Compatibility with host mainframes through IBM 2780, 3780 and 3270 emulation.

- The X.25 communications standard.

A fully expanded Micronet 85 incorporates a controller with a CPU, 1M byte of random-access memory and 80M bytes of disk storage. A basic system with a 512K-byte processor and a 5M-byte disk module costs \$19,500 and will be available in October from Sidereal at 9600 S.W. Barnes Road, Portland, Ore. 97225.

Two More Hopefuls Join PBX System Ranks

By Jim Bartimo
CW Staff

SAN DIEGO — With some 85 private branch exchange systems (PBX) already on the market from some 25 vendors, at least two more were added to the list here last week at the Tele-Communications Association annual meeting (TCA '83) here.

GTE Business Communications Systems, Inc. added to its Omni line of PBX systems with the introduction of the GTE Omni SIII said to switch both voice and data. With a capacity of 2,048 voice and data lines, the PBX can interface with local-area networks and public packet-switched data networks.

The Omni SIII uses a dual-bus architecture that permits high-speed

communications over existing single twisted-pair wiring, according to a vendor spokesman.

Shipments will begin in February at an average cost of approximately \$600 to \$700 per port.

More information is available from GTE at 12502 Sunrise Valley Drive, Reston, Va. 22090.

Harris Corp. added another PBX to its line of switches with the introduction of the Harris 400 PBX. Said to switch digital data at 9,600 bit/sec up to 4,000 feet, it also offers disk-based software.

The switch can direct calls to the least costly route, collect call information for pricing and processing with a personal computer and link at multiple sites to provide a company-

CW at
TCA '83

wide network, a vendor spokesman said.

All system parameters can be entered and changed for the Model 400 with a menu-driven personal computer — either locally or from a remote location. Available in January, the PBX will cost approximately \$500 per line from Harris' Digital Telephone Systems Division, One Digital Drive, P.O. Box 1188, Novato, Calif. 94948.

A somewhat unusual entry into the product announcement arena

was a message storage and retrieval system said to run in conjunction with the IBM Personal Computer. Candela Electronics, Inc. released software and a small printer to bring voice messaging to the microcomputer.

The Can-Print software allows the Personal Computer to store up to 800 messages entered from a keyboard and recalled on the screen. A Message Printer provides users with hard-copy message retrieval. The user pushes a button on the thermal printer to recall all messages, a vendor spokesman said.

The software is available for \$350; the printer for \$160 from Candela, 550 Del Ray Ave., Sunnyvale, Calif. 94088.

Several facsimile machines were also introduced at the show including those from Canon, Inc.

Canon's FAX-300 series desktop digital facsimile includes the FAX 330, which is said to send a message in 22 seconds. The 330 also features an LCD display that provides information about the party sending or receiving a transmission. The 330 is available for \$4,495.

The 320E can enlarge documents by as much as 33% and can also reduce document size. It has all the features of the 330 and is available for \$5,995.

Canon is located at 1 Canon Plaza, Lake Success, N.Y. 11042.

Top PBX Item: Can It Get A Dial Tone?

SAN DIEGO — "A lot of vendors are talking about all the features on their PBXs, but the most important feature is to get a dial tone," according to Jerry Wertzer, assistant director of private branch exchange (PBX) engineering for NEC Telephones, Inc.

Speaking at the Tele-Communications Association's (TCA '83) annual meeting here last week, Wertzer explained that a PBX should be measured by how well it establishes connections from one station to another and not necessarily by other available features.

In an attempt to guide the audience in the purchase of a PBX system, Wertzer suggested some questions to ask vendors.

First, switching systems can be judged by one factor in any given installation — the number of simultaneous conversations that can take place. With an eye toward the capacity of the PBX, users should also buy more lines than they immediately need and plan for the future, Wertzer said.

In order to plan for such new PBX features as data switching and voice store and forward, users should ask, "How much memory do I have to add and how much processing power?" Wertzer said.

Once the PBX is purchased, there are additional problems to be solved. For example, integrating voice and data means integrating the voice and data processing departments within the organization, he noted.

3274 SYSTEM FROM ALONG.

IBM 3274 system users no longer have to pull individual cables each time they add or relocate terminals.

The Codex Cable Mux provides transparent, high speed communications for up to 32 terminals through one single cable. It saves you money and offers unlimited flexibility in setting up terminal clusters throughout your entire organization.

The Codex Cable Mux also offers a variety of purchase and service options no other vendor can match.

Like the opportunity to lease a unit for as little as \$26 a month.

And a choice of on-site or back-to-the-factory maintenance.

For more information about Codex's Cable Mux, call 1-800-821-7700 ext 888. Or write: Codex Corporation, Dept. 707-88, 20 Cabot Blvd. Mansfield, MA 02048.

'No Way of Knowing About Logic Bomb'

WASHINGTON, D.C. — The Los Alamos National Laboratory security chief said last week there is no way of knowing whether a "logic bomb" was entered into the lab's computer system by hackers who have accessed the system without authorization.

A logic bomb is a programming command entered without trace in a computer system to perform some function at a later date, possibly including alteration or destruction of the computer's operating system and data files.

"I see no way to guarantee that there is not one," Jim McClary, Los Alamos Operational Security and Safeguards Division leader, told the House of Representatives Science and Technology Subcommittee inves-

tigating computer security. "Software verification is a very difficult problem; no one knows how to do it now," he said.

McClary, called on the carpet by the subcommittee, assured its members that there was no breach of security in the computer systems that are used for classified work by the laboratory staff, who conduct nuclear weapons research. The system accessed is an open computing system linking scientific and academic researchers around the country.

Little Loss

The unauthorized access by the "414" gang of computer hackers resulted in the loss of Los Alamos and Telenet computer time worth less

than \$300, he said. But "the disruption... required three to four work-months of effort on the part of system managers and security personnel in establishing exactly what the intruders had done," according to McClary.

Although there was no damage to the system before the laboratory discovered the access and moved to prevent further incidents, according to McClary, "the intruders could have caused confusion, delay and perhaps incorrect results for many users of the open distributed processors," he said.

He also stated that the lab has seen one other intrusion and other unsuccessful attempts since June, when the 414 incident occurred. Those have

also been reported to the Federal Bureau of Investigation, he said.

On the subject of security, McClary commented: "We weren't shocked when this occurred. We were disappointed that certain system managers had not changed the passwords [that came from the hardware manufacturer]. The nature of open computing," he said, "is such that things like this are going to happen occasionally."

Subcommittee Grills Hacker

(Continued from Page 1)

country, including those of the Los Alamos National Laboratory in New Mexico and the Sloan-Kettering Institute for Cancer in New York.

Asked by Rep. Bill Nelson (D-Fla.), sponsor of the pending federal computer crime bill, when he first realized this access was improper, Patrick said, "Not until the FBI knocked on my door."

Patrick spent about an hour educating the subcommittee in the ways of illegal computer hacking activities. He said the Telenet access number and the passwords used to access the computer systems were available from electronic bulletin boards used by other hackers.

The access, he said, "is something that just about anyone can do. ... I don't think any members of the group were geniuses or anything of that sort, but they were above average" in terms of home computer users. He noted that most of the computer systems still were using access codes that came from the factory, including "Test" and "System." Those passwords were ones that opened up the Los Alamos system, he said.

Asked by Rep. Albert Gore Jr. (D-Tenn.) how he was caught, Patrick replied, "I really don't know." Gore then told Patrick the Security Pacific Bank had set a trap for the hackers by offering a Star Trek game to keep them on the line until they could be traced. Patrick quietly said he remembered playing that game for several hours.

Patrick said he got his start in hacking after his father purchased a Radio Shack TRS-80 Model II computer for business purposes. Eventually, he said, "we [the 414 group] wanted to do more than just play around with our home computers" and get some experience working with large mainframes.

The 414s, who took their name from the Milwaukee area code, came together, he said, through a common interest in computers and had no formal organization or leadership. Patrick said he has been hacking for six or seven months and during the summer spent as much as 20 hours a week at that activity. It was, he said, "something to do in the evenings."

Most of the illegal access would have been prevented if the system operators had merely changed the passwords that came with the hardware, he said. "It's very easy to prevent that [access]," he said. "Just commonsense ideas and attitudes would prevent most of this — if not all of this — from happening."

2 Trillion

Last night we backed up
two trillion (yes, that's 12 zeroes)
characters of data, and
checked our work.

VMBACKUP

We bring files back alive, the way they should be—readable, usable—which some "cut-rate" backup systems *don't* do. We verify the data before moving it to tape. That's why 75% of the Fortune 100 companies trust their vital data to VMBACKUP.

How do we do this?

- Start with a solid design.
- Take the best systems people in the VM community.
- Have them build it right.
- Add competent, helpful support people.
- Stay close to our customers.

And we create a winning situation for our users.

Consultant Tries Break-Ins to Beef Up Security

Hired Hacker Not New Phenomenon to Geisco

By Tom Henkel
CW Staff

While many firms frown upon the mischief hackers cause in DP operations, a major computer time-sharing firm here has been relying on hackers for years as a way to beef up its security.

General Electric Information Services Co. (Geisco) has had a private consultant trying to crack password codes in its Mark III time-sharing system for better than 10 years.

Geisco hired its private consultant in the early 1970s to iron out security problems in the then new Mark III time-sharing system. Based on Honeywell, Inc. hardware, the Mark III software was developed in-house and geared to a time-sharing environment.

Geisco vice-president of technology operations, Raymond W. Marshall, said the consultant has yet to break into either the Mark III system or the more recently developed IBM-based Mark 3000 system. The consultant has, however, been able to identify potential problems.

"He acts as our most intelligent user," Marshall said, noting the Geisco consultant probably knows as much about the Mark III system as many in-house employees.

Attempts Unauthorized Use

The Geisco consultant's job is to use a fairly low-level system access password on the Mark III and IBM-based Mark 3000 systems and attempt to make unauthorized use of DP service, or to gain access to the code for the applications programs available on the two time-sharing services, Marshall said.

To perform his hacking duties, the consultant is given free reign with

the firm's manuals and system descriptions that might help him learn enough about the Mark III system to break its security, Marshall said.

"We just let him poke around," Marshall added, noting the consultant submits regular reports on his hacking adventures, including how successful he has been with a particular method.

While noting that neither the hired hacker nor anyone else outside of Geisco has successfully gained unauthorized access to the Mark III or Mark 3000 systems, Marshall said the biggest risk to large systems is from in-house. Geisco also uses a third-party auditing firm, Peat, Marwick,

Mitchell & Co., to do a regular independent audit of security measures at Geisco.

He cited the example of a very valued employee who has access to internal passwords in a system. If that employee leaves, especially if under unpleasant circumstances, there is a chance he could either steal information from the system or damage it in some way. The Peat, Marwick, Mitchell audits help to ensure such a user has been locked out of the Geisco system by identifying all passwords assigned to that user. In addition, the audits also help identify passwords that are no longer assigned to valid users, Marshall said.

School Invites Hackers to Break Into Its Systems

SEATTLE — While General Electric Information Services Co. is not inviting anyone with a flair for hacking to try to break into its computer systems, Western Washington University (WU) here is doing just that.

With more than 30,000 students and faculty members signing onto the school's system each quarter, Joan Hayes, the school's coordinator of academic computing services, said hacking is a way of life.

Instead of punishing offenders, administrators reward students for reporting security problems in the school's Digital Equipment Corp. VAX-11/780 processor. Hayes said rewards usually take the form of more memory for the individual's account.

The school instituted the reward policy back in 1975 when four students managed to break into an earlier Perkin-Elmer Corp. processor.

The major flaw with the WU policy, Hayes admitted, is it is often unclear whether students caught attempting to break into unauthorized parts of the WU system are doing so for the good of the university or for personal gain. This is further clouded by the fact that the university has adopted legislation making devious computer hacking a crime.

As long as data has not been lost or altered, Hayes said, the school is usually lenient toward hackers — provided they are willing to cooperate in closing system loopholes. If they do not cooperate, the offender is barred from using the system until he repents. Hayes added, the policy only applies to bona fide internal system security problems. Students who steal passwords, for example, are treated much more harshly.

A limited offer from MSA:

Get the latest payroll tax information for your company FREE

There have been 127 changes in payroll tax laws in the United States and Canada this year alone.

Do you know about them all?

In this same period, 25 update bulletins were sent to every MSA ALLTAX™ customer, containing all these changes in a tested, ready-to-apply form.

Between now and November 30, 1983, MSA will give you an update on payroll tax laws that apply to

involved in a payroll tax change and take care of them for you.

Because we unconditionally guarantee the accuracy of the change information we provide you.

Because, instead of dealing with a small unproven company, you'll be working with MSA.

All it takes is a free phone call.

Call

1-800-241-3427

(in Georgia or Canada, call collect 1-404-239-2030).

You have nothing to lose, and more organized,

your company while you wait.

This is our way of introducing you to MSA's ALLTAX Payroll Tax System, the most widely used payroll tax system in the world.

Right now, there are over 3000 successful, operating installations. Why?

Because we provide you with coded, tested tax changes so quickly they probably arrive before you know they're going to happen. Because we take all the complexities

more efficient, more up-to-date payroll tax software to gain.

Attempted Robbery Foiled by 'Midas' Touch

By Peter Bartolik

CW Staff

CLINTON TOWNSHIP, Mich. — Midas did not provide the golden touch for an alleged thief apprehended here recently.

Midas is an acronym for Multiple Listing Information Data Assistance System, the user-written software for an on-line system connecting more than 100 real estate agents with the Macomb County Multiple Listing Service (MLS).

The alleged con artist/thief was

San Diego Man Pleads Guilty In Fraud Case

By Patricia Keefe

CW Staff

ATLANTA — A 22-year-old San Diego man pleaded guilty last Monday in the U.S. District Court of Northern Georgia here to charges that he posed as a representative of a major industrial corporation and fraudulently ordered a microcomputer system.

Last January, Brian A. Graves reportedly used the guise of a General Dynamics Corp. representative to order a Vector Graphic, Inc. Model V4/30 microcomputer.

In return for his plea, the U.S. District Attorney's office here has agreed to recommend a sentence of five years. If he had not entered a guilty plea and was found guilty, Graves could have been sentenced to 10 years in prison, according to U.S. District Attorney Richard Dean. Sentencing for Graves was scheduled for last week. Although Graves pleaded guilty to the January incident, it is allegedly not the first time he has posed as a General Dynamics executive or fraudulently ordered computers or computer equipment.

In fact, he was arrested June 23 in Jacksonville, Fla., when he allegedly attempted to pick up another computer valued at more than \$4,000, according to Federal Bureau of Investigation Special Agent Doug Jones. That computer was allegedly shipped by Teleram Communications Corp., although officials of the White Plains, N.Y., firm expressed no knowledge of the fraudulent order.

Graves also allegedly attempted to place other orders — some for as much as \$10,000 worth of computers and parts — from computer suppliers. In each case, he reportedly used various aliases, all fictitiously identified as employees of General Dynamics. Whether Graves was successful in picking up any of these alleged orders and what he is supposed to have done with the computer equipment are not known.

To date, the alleged felon has only been indicted on the January incident, District Attorney Dean said. Dean would not comment on the possibility of other indictments involving Graves.

Graves' attorney, Michael McIntyre, declined to comment on the case other than to confirm Graves' plea.

nabbed in a real estate office here recently after an employee read the culprit's description in the MLS system's electronic mail.

William Lawson is being held in lieu of \$10,000 cash surety and faces 10 outstanding warrants in addition to the larceny charge filed here, according to a police detective who described Lawson as a "local con man."

According to Virginia Easton and Phil Hogan of the MLS center in St. Clair Shores, about 10 miles from here, a thief had been fleecing real estate agents by posing as an executive looking for a house and then robbing the real estate personnel.

"He was going into real estate offices and saying he worked for the GM [General Motors Corp.] Techni-

cal Center in Warren and that he was looking for a home in the \$150,000 to \$175,000 range," Easton said. When the agents left the room to check listings, the man would rifle through purses and flee.

The robberies had reportedly been going on for about two or three weeks, Easton said. After a pattern became apparent, the MLS put a message on its on-line system, providing a description and warning real estate offices to be on the alert.

On Tuesday, Sept. 20, when Lawson walked into the Re-Max Real Estate Co. office here, one of the agents in the office was looking at the terminal and read the message.

The MLS, which carried the crime alert, serves 275 offices in the county,

127 of which are connected on-line to the service's Stratus Computer, Inc. Stratus/32 superminicomputer, Hogan said.

The police were immediately called and secretly observed Lawson's actions from another room. When the agents left the office, Lawson allegedly was seen going into an employee's purse and was apprehended.

Police said two charges have been lodged and that Lawson has said he may have committed five similar crimes. Lawson technically already faces a prison escape charge because he was arrested while assigned to a halfway house after serving seven months of a three- to 14-year prison sentence for writing bad checks.

Why Fairchild Industries didn't go with a fly-by-night software company.

But Not Enough to Win Game System Helps BC Football Coach Call the Plays

By David Myers

CW New York Bureau

CHESTNUT HILL, Mass. — Computers can do a great many things, but they cannot block and tackle.

That was the story when 15th-ranked Boston College (BC) fell to eighth-ranked West Virginia University on the Alumni Stadium turf here by the score of 27-17 on Sept. 24.

The showdown between the two eastern powers had been building up as a test of computers in college football since BC uses an IBM 4341 to set its strategy while West Virginia sticks with the time-hallowed method of doing things by hand.

Jack Bicknell, head coach at BC,

told *Computerworld* in a pregame interview that the Eagles depend on the mainframe for "everything we do."

West Virginia, meanwhile, has an Amdahl Corp. AS7 mainframe on its Morgantown, W. Va., campus, and the university's data specialists have assured Mountaineers' head coach Don Nehlen it would be no problem to program the computer to comb through scouting reports and offer strategy.

So far, however, the Mountaineers have made use of the computer only in recruiting high school athletes.

BC, by contrast, feeds its on-campus mainframe a mountain of scout-

ing reports on its next week's foe. The computer then spits out an analysis of the team's play selection.

"It tells us what to expect from them on first and 10, or second and long or third and inches," Bicknell said. The BC coaching staff uses the information to array its defenses.

But more than that, the Eagles use the computer week by week to scout themselves.

"We want to know what our opponents are looking at when they look at us. What we're trying to do is make sure we don't have a lot of tendencies. We don't want to be predictable. We use it [the computer] in planning our attack," Bicknell said.

But Bicknell added that his squad's computer tactics, marshaled by Brian O'Connor — a local high school teacher — are nothing rare. "All colleges are into computers," Bicknell said. "They give you a more complete look and a lot more concise information than you could ever get through the old-fashioned way of compiling reports by hand."

Actually, Bicknell was wrong. West Virginia does not use a computer in its football program.

"We're looking into it. We want to do it. We have all the same data our opponents have. All we need to do now is speed up the process," assistant coach Donnie Young said.

A lack of manpower in the school's DP center has left West Virginia lagging behind its Saturday opponents in appointing a computer to its football brain trust.

"We've got the talent, and I've been encouraging [the coaches] to pursue it. But so far, I guess they haven't had the time," Dan Ord, an administrative data specialist, said.

Even so, the West Virginia coaches said they were not afraid their foes' computers give them an advantage. "In football, there's just so much data you can use," Young said.

Helps Coaches Prepare

Bicknell agreed the computer "is not going to help your kids play. But it is going to help your coaches prepare," he insisted. And the computer printouts on West Virginia had given his staff a complete familiarity with the Mountaineers by game time.

All the beautiful clear logic of the Eagles' computerized game plan was scrambled when BC lost its leading ground-gainer and the ball on the opening kickoff.

Starting tailback Troy Stradford was knocked momentarily unconscious and fumbled the football at his own 16-yard line. West Virginia recovered, scored just over a minute later, and for the rest of the afternoon, BC was forced to play catch up.

But as one college coach told CW privately, "Sometimes it [computer strategy] holds up, and sometimes it doesn't."

GSA Appoints Reeder as Chief Of DP Group

WASHINGTON, D.C. — The U.S. General Services Administration (GSA) has announced that Franklin S. Reeder has been appointed chairman of the Interagency Committee on Automatic Data Processing for 1983-84.

Reeder, a member of the information policy staff of the Office of Management and Budget, succeeds former chairman Reed Phillips of the Department of the Interior, who resigned from government service to work in private industry.

The committee, sponsored by the GSA under executive order, prepares position papers and makes recommendations for improving automatic DP within the U.S. government.

Because GE Information Services Company is a world leader in manufacturing information services.

And has been for years.

What's more, as an affiliate of the General Electric Company, one of the world's largest, most diversified manufacturers, we bring vast experience to the design of our manufacturing systems.

MIMS-MFG. A system with the flexibility to change as your business changes.

With MIMS-MFG, if your needs change, you don't necessarily have to change your system. You have the flexibility to quickly create new applications.

That's because MIMS-MFG is written in a user-friendly, 4th-generation language.

End-users don't have to be computer experts to use it. All they have to be are manufacturing experts.

It can be installed on your IBM mainframe computer system fast... or you can start today on our IBM-based computer service. In a few weeks, you can be up and running, instead of waiting months.

MIMS-MFG gives you 14 modular subsystems to help you plan and control everything from order receipt to materials management to shop floor control.

We have 5,000 professionals to consult, design, develop, install and maintain a system just right

for your needs. And train your people to use it effectively.

MIMS-MFG is one of the many software solutions from GE Information Services... chosen by over 100 leading manufacturers all over the world.

DOD Calls Access Charge Threat to U.S. Security

By Jake Kirchner

CW Washington Bureau

WASHINGTON, D.C. — The U.S. Department of Defense (DOD) last week reiterated claims that the effects of telecommunications deregulation, particularly the Federal Communications Commission's (FCC) controversial access charge decision, jeopardize national security.

The breakup of the AT&T system and pro-competitive FCC actions, by increasing the number of communications carriers the department will have to deal with, will create special burdens on DOD communications planning, the DOD said. In addition, the access charge could seriously raise the costs to the government for defense communications, according

to the DOD, which spends more than \$1 billion annually for commercial communications services.

"I cannot overstate the significance of the impact upon us, from a cost, management and operational standpoint," Lt. Gen. Winston D. Powers, director of the Defense Communications Agency, told the House of Representatives Government Operations Subcommittee on Government Information, Justice and Agriculture last week. The subcommittee was continuing a series of hearings on the FCC's access charge decision.

The access charge would initially add \$2 a month to residential phone bills and \$6 to businesses. The charge is meant to make up for the lost long-

distance subsidies to local telephone rates under the telephone system that will go out of existence at the end of the year when the reorganization of the Bell system is complete.

Spate of Bills

A spate of bills in Congress would alter the access plan; one proposal would add charges for bypass systems to help subsidize universal telephone service. Efforts to produce a bill acceptable to a wide spectrum of legislators and the public have been unsuccessful so far. The Senate Commerce Committee failed last week to draft an acceptable bill, although a proposal to delay the access charge for one year gained ground; the House Telecommunications Subcom-

mittee, which is having similar difficulties, is slated to take up the effort again this week.

Representatives of the Florida and Michigan public service commissions told the government information subcommittee last week that the access charge could easily lead to a doubling or tripling of consumer telephone rates. This would result in several hundreds of thousands of people in every state being forced to give up telephone service, they claimed.

The Defense Department has been uneasy about telecommunications deregulation for some time and has attempted to derail or limit it.

Deregulation and related FCC decisions, the DOD's Powers told the subcommittee, "mean higher costs of obtaining service and increased manpower costs for the DOD, both in the short term and in the long run, no matter how well we communicators do our job. Indeed," he added, "I believe that most of these decisions simply do not adequately account for the problems of a nationwide communications customer with the unique needs of the DOD."

With many of these changes imminent, the government does not have the money budgeted to pay for what it expects will be significantly higher telecommunications costs, warned Donald C. Latham, deputy under secretary of defense for communications, command, control and intelligence.

The situation is also of concern to the civilian federal agencies, but Frank J. Carr, assistant administrator of the General Services Administration (GSA), said it is impossible to predict accurately how the agencies will be affected. Carr, who heads the GSA Office of Information Resources Management, which has governmentwide responsibility for computer and communications procurements, said conservative estimates are that these agencies will spend between \$37 million and \$40 million more in 1984 alone.

Dbase II Meet Set for Nov. 10 In Long Beach

CULVER CITY, Calif. — Users of Dbase II will have their "Dbase II Runtime: Key to Success" conference aboard the Queen Mary Hotel in Long Beach, Calif., Nov. 10-12.

A keynote speaker will be Edward A. Feigenbaum, professor of computer science at Stanford University and coauthor of *The Fifth Generation: Artificial Intelligence and Japan's Computer Challenge to the World*.

Sponsored by Ashton-Tate, Inc., vendor of Dbase II, the conference will include keynote speakers, panel sessions, seminars and technical workshops aimed at providing Dbase II users and developers with technical expertise, start-up business advice and marketing assistance.

Registration for the conference is \$350. Further information is available from Ashton-Tate, 10150 W. Jefferson Blvd., Culver City, Calif. 90230.

There's a lot to like about the new Zenith ZT-10, starting with the price.

Display of how-to-use instructions and terminal setup commands.

Parallel print port standard.

Stores 26 names and phone numbers (to 21 digits).

Normal, reverse, half-intensity, blink video display.

Programmable for up to 26 pre-selected information sources. Can include commands as long as 127 characters.

For modem users, Model ZT-11 has an auto-dial, auto-answer 300 baud modem built in.

Business graphics with 33 symbol characters and 95 ASCII. Also parity, edit and erase functions.

One-touch accessing lets you automatically log-on to your mainframe with an optional smart modem.

RS-232 interface at data rates of 110, 150, 300, 600, 1200, 2400, 4800 and 9600 baud.

Detached full-size keyboard with 63 keys, including "help" key.

Compact, only 15" wide. Keyboard weighs less than four pounds.

\$499.00

IT'S NICE TO HAVE A FRIEND WHO OPENS SO MANY DOORS!!

Tom Wilson

© 1983 Universal Press Syndicate

The Zenith ZT-10 represents a major advance in data access terminal engineering. And a major break-through in price/performance.

With the ZT-10 you get an RS-232 port and DEC VT-52 compatibility. Teamed with any Zenith green or amber video monitor, the ZT-10 is perhaps the lowest cost 9600 baud ASCII terminal yet.

Best of all, this terminal-in-a-keyboard actually gives you more for less. Great access power, for instance. With its menu table and single master key you've got one-touch access to mainframes, minis, micros—and any VT-52 terminal system!

Behind the ZT-10 and every Zenith product

is our regional distribution network. This assures you the best in service and support, as well as the fastest possible delivery.

For more information about the ZT-10 and our complete line of video terminals, desktop computer systems, monitors, peripherals and software, see your nearby Zenith Data Systems distributor. Or call (800) 323-5924. In Illinois, call collect (312) 391-8861.

ZENITH data systems

The quality goes in before the name goes on.

Facing Increasing Poverty Gap

Computer Literacy Seen Key for Black Workers

By Peter Bartolik
CW Staff

NEWARK, N.J. — Black Americans face an increasing poverty gap if they don't strive to become computer literate, a black physicist told the Fifth National Convention of the Black Data Processing Association (BDPA) here recently.

Prof. Chandler Dennis, physics professor at Stockton State College in New Jersey, told BDPA members meeting here recently that their future is "encouraging" because of industry demands. But for most blacks, he added, "There's a revolution going on, and we're not part of it."

He said blacks hold 10% of the skilled, manual jobs at mainframe sites and 8% of programming jobs. "Those are the kind of ratios we want to see," he said.

Promotion Prospects Good

Promotion prospects for "blue-collar workers of the future" are good, according to Dennis, particularly because the industry is generally not hampered by unionization, which he said has tended to hold back minorities.

However, he added, "My research has indicated that black folks are not particularly computer literate" and face potentially severe unemployment problems as robotics eliminates the need for nonskilled production workers, of which "we comprise a disproportionate share."

He urged BDPA members to serve as role models for young blacks and to encourage early development of

CW at BDPA

computer skills in poor schools. If computer literacy is not strongly encouraged, he concluded, blacks generally "will become economically obsolete."

In keeping with the conference theme, "Rise to the Challenge" — inspired by a speech delivered by Martin Luther King in 1962 — blacks already involved in data processing were encouraged by Dennis and other speakers to hone their profession-

al and interpersonal skills to take advantage of shortages in the data processing field.

Interpersonal Skills

Len Myers, vice-president for technical operations at Computer Horizons, Inc., a consulting firm, told BDPA members that the most important requirement for budding black DP entrepreneurs is the development of interpersonal skills.

"When you can't communicate, you cease to exist," he said. Myers said blacks have to develop professional credibility to obtain contracts.

Robert Davis urged BDPA members to seek out professional "net-

works" to enhance their careers and to seek out mentors to improve their prospects.

Davis was a Sloan Foundation fellow at MIT in 1978; he is presently director of administrative services and facilities with AT&T's Central Services Organization in New Jersey.

A powerful asset not to be overlooked in the DP industry is the ability to write well, according to Bessie William, manager of General, Small and Office Systems Support for IBM's Federal Systems Division in Washington, D.C.

Writing, she said, "gives you an opportunity to influence many people, some that you don't even see."

BDPA Issues DP Challenge To U.S. Industry

By Peter Bartolik
CW Staff

NEWARK, N.J. — The Black Data Processing Association (BDPA) is challenging U.S. industry to increase productivity through automation. In line with that challenge, it is developing its own strategies to bring computer skills, which could then be used as a resource, to the general black population.

"In order to survive, American business needs to increase productivity and improve the quality of its products and make a long-term commitment to growth. Failure to do any one of these things will result in the death of that business or that industry in America," said Gerard Anderson, coordinator for the BDPA's fifth annual meeting held here recently and a systems engineer with IBM.

For the past few months, Anderson has been traveling throughout the country as a representative of the BDPA's education committee.

Anderson's message is twofold. First, he said, "I'm trying to get blacks in DP to understand the pressures on American business and the effects of foreign competition."

The rest of the message deals with "how blacks in the DP industry have the responsibility to be as produc-

WE MAKE SOFTWARE HEROES™

We set the standard in software testing...and deliver the tools that are enabling thousands of user organizations throughout the world improve software quality and increase productivity.

- **DATAMACS**/industry's most widely used automatic test data generator
- **Test Plan Training**. Give us a morning and we'll show you how to cut development costs 20%; free up to 80% more time of your maintenance staff

- **TRACMACS**/program path auditor that assures 100% testing
- **Testing Standards**, developed in concert with our users, and being proven daily by Big 8 accounting firms, IEEE, QAI, DPMA and hundreds of quality-conscious users

In less than one year, **ESTIMACS** has established itself as the most widely used macro estimating tool in the data processing industry. Widely acclaimed as the only trusted macro estimator, it is

helping organizations accurately, reliably estimate new development and system maintenance workloads — especially helpful in package installations, make-or-buy decisions, and long-range planning.

Introducing **PROJECTMACS**, the industry's first and only knowledge-based project management system for phased software development. The logical follow-on to **ESTIMACS**, **PROJECTMACS** is a unique systems development tool for knowledge-based micro-phase

estimating, expert project planning and scheduling, and distributed project tracking and control. A dramatic step forward in the automation of the software development life cycle and project management tasks, **PROJECTMACS** goes far beyond any traditional project control/accounting system.

BDPA Members Discuss Backgrounds

By Peter Bartolik
CW Staff

NEWARK, N.J. — Deborah Watson knows where she is going. Kenneth Russell knows what it's like to get there.

Both are members of the Black Data Processing Association (BDPA), and during that organization's fifth annual convention here recently they told *Computerworld* of their experiences and goals

CW at BDPA

in the DP industry. While their goals are somewhat similar, their experiences with racism in the industry are quite different; Russell said his skin color has not adversely influenced his career, while Watson said she

has experienced discrimination because of both race and sex.

Watson is a senior analyst/programmer with Smithkline Beckman Corp., a pharmaceutical company located in Philadelphia and has a firm idea of where she would like her career to evolve. "Within the next five years, I'd like to be in Smithkline's management; within 10 years, I'd like to

have my own business," she said.

Russell already has his own business, Information Systems Consultants in Cleveland, a partnership he entered into with another BDPA member he met during the organization's first convention in 1979.

Prior to that he had worked in several Cleveland-area businesses, starting off as a computer operator during a transition from an IBM 1401G to an IBM 3160

(Continued on Page 19)

BDPA Offers Strategies For Change

(Continued from Page 17)

tive, as responsible and as resourceful as anyone else in the business," he said.

Automation, according to Anderson, is the most efficient way for business to increase productivity; but, as many speakers at the convention noted, it is also potentially most threatening to the many blacks who work in nontechnical manufacturing jobs that may be eliminated by the increased use of robotics.

BDPA members are apparently fully aware of the effect their efforts may have on the black population in general. To create more jobs for blacks, "we must help American business stay on its feet to remain competitive and move ahead," Anderson said.

Pointed Strategy

It is a pointed strategy for blacks in DP: "We acquire a can-do attitude that we can take back to the black community and motivate those who are still struggling there to move ahead and fill our shoes," Anderson said.

Each of the local BDPA chapters has established and is developing programs to bring to the black community the skills of computer literacy.

The BDPA, therefore, has three tasks, according to Anderson: It must help blacks in DP to advance their careers; bring the age of computers to the black community; and help the DP industry make advances that will increase competitiveness and thereby produce more jobs in America.

Those sentiments, from a quite different perspective, had been voiced at the start of the convention by Newark's black mayor, Kenneth A. Gibson, who delivered the welcoming address. "We need your talents, your experience and knowledge and growing knowledge."

We're Lowering the PRIME RATE!

Quadrex passes PRIME Discounts On to You.

Software vendors and system builders, join Quadrex's growing network of Prime subcontractors, and take advantage of our discount on Prime computer systems.

As a high-volume integrator of Prime equipment, Quadrex can offer you one of the highest discounts on Prime systems and peripherals, plus a host of other benefits, including:

- Quadrex engineering assistance for hardware integration and system configuration.
- Software conversion for programs currently running on IBM, DEC, Modcomp and other systems.
- Discounted pricing on all your non-Prime peripherals including terminals, printers, plotters and modems.
- Quadrex's 14 years of experience and financial stability, plus a fully-staffed department dedicated to the Prime subcontractor program.

As a member of Quadrex's nationwide network of subcontractors, you'll have access to the Quadrex software catalog for a vast selection of other Prime software to broaden your market base and boost your Prime sales. By the same token, the entire subcontractor network becomes a potential nationwide salesforce for your product.

At semiannual subcontractor conferences, you'll meet and share ideas with other vendors of Prime applications software. Your quarterly subcontractor newsletter, with troubleshooting success stories and technical notes, lets you benefit from the experience of other Prime system builders in the Quadrex network.

Whether you sell one system or 100, you get the same high discount on Prime equipment through Quadrex. As Quadrex's volume increases, we'll pass on to you our graduated dis-

count from Prime. Start as a small subcontractor, and gradually increase your sales volume.

With Quadrex, your subcontractor contract is non-exclusive and includes no minimum sales volume or obligation to buy. We think you'll find our service and responsiveness enough incentive to stay with Quadrex.

For more information about the advantages of the Quadrex subcontractor program, call us at (408) 370-4266 or write to Procurement Services Marketing Manager Quadrex Corporation 1700 Dell Ave., Campbell, CA 95008

And Career Decisions, Look to Future

(Continued from Page 18)
and progressing to programmer and then to systems analyst. Along the way he acquired experience in communications and in data bases. "Data base experience made me valuable," he said, and led to consulting.

Watson started her career with an insurance company in 1968. After 13 years with three insurance companies, she felt her career prospects were limited, and she moved to Smithkline, where she now works in a shop with an IBM 3031, IBM 3033 and some personal computers.

She has also started a part-time consulting firm, Computer Information Management Systems, offering computer literacy services. "Eventually I want to start my own consulting firm to offer DP skills to small businesses in the area," she said.

Russell already had contacts in the private sector when he formed his partnership, which "had two people who were marketable and who could generate revenue." The firm has grown to seven people and two offices, and growth required a structured marketing effort, he said.

The partnership offers DP services in data distribution, systems analysis and programming. Last year "was bad for everyone" in consulting, he said, and the firm added an aspect he believes will level off the cash flow sheets "that looked like mountain ranges."

He has established a dealership with Nippon Electric Co. marketing microcomputer systems and developing integrated software in such areas as dental office man-

agement, school administration, wholesale distributorships and others.

Being black has not placed extra obstacles in his path, Russell said. "I consider myself as a black in business, not a black businessman." The challenge, he said, is being an independent businessman.

Cash flow is the toughest problem facing independents, according to Russell.

Seeing unlimited opportunities opening up in this decade with the increasing availability of computer hardware, "The challenge is how to grow as fast as possible with the money available to you," he concluded.

Watson said she has felt discrimination in the industry. When she started her career, "There was a push to get black women — because they fit two [affirmative ac-

tion] categories — into higher positions, so we moved very rapidly," she recalled. In the late '70s the atmosphere changed, and she felt limited career opportunities in the "basically structured" insurance industry.

"It's difficult sometimes proving yourself to a white male manager; it's not only black women who have problems but also white women," she said.

DEDICATED TO DATA ENTRY SOLUTIONS

Inforex is known for reliable products by thousands of customers worldwide. Our Intelligent Key Entry® line offers many advantages over other key-to-disk systems. And our customer support is unrivalled. We're there when you need us.

As data collection has evolved, we've been helping MIS directors manage the change. And the industry has been changing. The trend has been towards distributed data entry. You'll find many vendors have abandoned the centralized user. Not Inforex. We're dedicated to building technologically advanced systems that meet the demands of centralized and source environments. Bringing you better solutions at a lower cost.

What the industry has been missing is one system that effectively handles both centralized and distributed data entry. Until now.

Find out more about our fine line of data entry systems. You'll find our offices in all major cities, and our corporate headquarters at 186 Middlesex Turnpike, Burlington, Massachusetts 01803.

Call 800-225-3397.

INFOREX

In data entry, we are the answer.

San Diego To Sponsor Net Meet

SAN DIEGO — Broadband local-area network technology will be the topic of the second local-area network conference sponsored by Sytek, Inc. and San Diego State University (SDSU) here Nov. 8-10.

The three-day conference will apply classroom techniques to network systems evaluation, design, implementation and control, using the university's broadband local-area network as a model.

Registration for the conference is \$675 in advance or \$750 on the first day of the conference. Additional information is available from SDSU/Sytek Conference at 1225 Charleston Road, Mountain View, Calif. 94043.

Programmers Told to Develop Skills in DBMS

By Peter Bartolik

CW Staff

NEWARK, N.J. — "You won't have jobs unless you understand data base management systems [DBMS] and nonprocedural languages."

That was the advice Robert Stewart gave to a group of black programmers who attended a workshop on future trends here at the recent fifth annual meeting of the Black Data Processing Association (BDPA).

Stewart, a manager of competitive analysis for Sperry Corp.'s Competitive Systems Division in Blue Bell, Pa., said blacks in DP, and particularly applications programmers, need to develop professional skills in areas that are likely to be at the forefront of future computer systems developments.

Communications Arena

"If I were you, I'd get involved in communications," he said, pointing out that communications within networks and through gateway technology to other computer systems will be required by businesses seeking to maintain profitability. "I'd go back to school and take some courses," he added.

Also speaking at the workshop was Antonio Parham, a black member of Hewlett-Packard Co.'s Systems Development Group, who explained his company's work in the field of integrated medical systems.

HP, according to Parham, is developing extensive networking structures to enable hospitals to "improve productivity in the delivery of services" as increasing demands for services strain limited financial resources.

Stewart, who is responsible for analyzing systems developed by Sperry's competitors, said, "All the vendors are putting their money" into the development of relational data bases.

Businesses, seeking to maximize productivity and profits, will seek common data bases for all functional departments within their organizations, according to Stewart. "Programmers are not just going to have to know bits and bytes, [they

are] also going to have to understand how the company makes money from its products," he said.

As microcomputers proliferate in business organizations, Stewart said, programmers will have to become adept as data base managers. "[DBMS] are going to be the thing I think that we, as vendors, both software and hardware, are going to concentrate on the next few

CW at BDPA

years."

Parham pointed out that hospital life-support functions previously hooked into minicomputer systems can now be located at bedside in microprocessor-based monitors. As such devices proliferate,

he added, "We're going to have to have strategies in place to distribute the data over networks" to a limited staff.

Microcomputers will have easier-to-use applications languages with which to manipulate data, but they will still require DP personnel to manage data bases, according to Stewart. The task for DP personnel, he said, "will be how do we manage data —

putting information into the hands of the end user."

Stewart noted that Sperry and other vendors all maintain data bases on their competitors and make them available on-line to sales personnel who need the information immediately.

"We've taken a long time to do some of these things, an awful long time. We're not going to be able to do that anymore," he said.

'User-Friendly, I Presume.'

To Develop Management Document

OMB Requests Public Comments on Info Policy

WASHINGTON, D.C. — The U.S. Office of Management and Budget (OMB) has requested public comments to help it revise current federal information management policies and develop a comprehensive policy document.

The OMB project, the agency said, was undertaken to "establish government-

wide policies which enhance the appropriate application of information technology, encourage better management and allocation of technological resources and eliminate unnecessary structural or administrative barriers to more efficient information resources management."

The agency is reviewing existing policy circulars that

cover such topics as DP administration and management, computer security, records maintenance, cost recovery and interagency sharing of DP facilities.

OMB also said it is considering broadening the range of its policy directives in its effort to develop a more comprehensive policy statement.

The agency is soliciting comments on a number of topics including: general principles of information resources management, privacy in information gathering and processing, competition with the private sector, DP security, standards, software management, long-range planning and microcomputer technology, end-user com-

puting and office technology.

Comments on these and other topics related to the OMB policy project should be submitted by Nov. 14 to J. Timothy Sprehe, Office of Information and Regulatory Affairs, Room 3235, New Executive Office Bldg., Office of Management and Budget, Washington, D.C. 20503.

Users Group To Donate Licenses

COLLEGE PARK, Md. — The Mumps Users Group has announced a program to donate licenses for the use of Mumps computer languages in colleges and universities.

According to Dr. Ruth E. Dayhoff, chairwoman of the Mumps Users Group, the licenses, provided by six vendors of Mumps-based systems, will be awarded on the basis of proposals to use Mumps for educational and research purposes as well as on the qualifications of the applying institutions.

A grants panel created by the organization's executive committee will review the proposals.

"Our objectives are to set the stage for the next generation of Mumps users and to give the language a more assertive presence in the pre-professional student world," Dayhoff said. Each participating institution will be expected to produce reports suitable for publication describing the projects being undertaken, Dayhoff said.

The vendors in the program are: Data Tree, Inc.; Digital Equipment Corp.; Harris Corp.; Intersystems, Inc.; Micronetics, Inc.; and Vista Computer Co.

Institutions interested in participating in the Mumps licensing program should send their proposals and qualifications to Ruth Dayhoff, Chairwoman, Mumps Users Group, Suite 308, 4321 Hartwick Road, College Park, Md. 20740.

TELEVIDEO'S 970: GET IN ON THE ANSI BOOM.

The TeleVideo 970 Terminal. The computer professionals' most powerful ticket to the emergence of the ANSI standard.

The overwhelming acceptance of ANSI X3.64 has revolutionized the future of trans-system communication and software compatibility. Now TeleVideo steps forward with the ultimate complement to that revolution. The ANSI equipped TeleVideo 970 terminal.

The 970 takes the lead in utilizing the advantages of the ANSI code structure. It's 32 non-volatile function keys literally automate ANSI code command entry. Other features include VT-100 compatibility, block mode operation, block graphics and attributes and a totally reconfigurable keyboard. An RS232 printer port with built-in buffer is standard. All this is packaged in the 970's unique vertical convection cooling tower. It protects sensitive circuitry without the noise of conventional fan-cooled construction.

In terms of operator comfort the 970 has no equal. The keyboard with ten-key accounting pad is ergonomically designed with a naturally contoured palm rest and sculpted keys. The non-glare 14 inch screen allows maximum readability in either the 80 or 132 column format. And you can display double-high, double-wide characters on the same fatigue-free background we've been applauded for throughout the industry. Screen tilt adjusts at a touch to further fight operator discomfort.

Of course, as with all TeleVideo terminals, 970 service is available nationwide from General Electric Instrumentation and Computer Service Centers.

The 970. A combination of power, ease of use and TeleVideo reliability at a time you need it most. The ANSI boom is here. Get in on it with the TeleVideo 970.

Call us at (800) 538-8725 for more information (in California call (408) 745-7760) or contact your nearest TeleVideo office:

GET IN ON THE BOOM.™

TELEVIDEO TERMINALS

TeleVideo Systems, Inc.

"Will That Be a Printout, Sir?"

Trailways

Honeywell computers help Trailways move over 20 million people a year at the touch of a button.

Trailways faced a challenge recently. They wanted to improve cash management, the accuracy of pricing and scheduling, and the efficiency of their terminal operations.

So they came to Honeywell, and together we worked out a solution based on our microSystem 6/10. Now, at the touch of a button, ticket agents can see schedules, routes and rates for thousands of Trailways' destinations. The possibility of error is all but eliminated. The system even prints the tickets automatically.

Trailways' managers will benefit by having faster access to data. For example, the system facilitates interline accounting and furnishes feedback on marketing campaigns—a critical edge in a newly deregulated environment.

What's more, the microSystem 6/10 is easy to use, easy to program, and

compatible with the Honeywell minicomputer and mainframe host at Trailways' home office. (Only Honeywell has total instructional set compatibility for micros, minis and mainframes).

The microSystem 6/10 has 512K of memory. More than enough to handle the vast amounts of rate/schedule data Trailways must store, as well as information on daily transactions.

And the system is a snap to install, reliable, and backed up by Honeywell's nationwide service organization.

Information control. That's what keeps Big Red rolling.

For more information on the microSystem 6/10 and the advantages of full-line compatibility, call 800-328-5111, ext. 2708 (In Minnesota, call collect 612-870-2142, ext. 2708) or write Honeywell Inquiry Center, 200 Smith Street (MS 440), Waltham, MA 02154.

Together, we can find the answers.

Honeywell

Wiley Speaks on AT&T Breakup Via Audio Link

By Jim Bartimo
CW Staff

SAN DIEGO — Although detained by a late-breaking development in Washington, D.C., Richard Wiley — a former head of the Federal Communications Commission (FCC) and senior partner of a Washington law firm — still managed to address International Data Corp.'s 1983 Fall Executive Conference here last week in absentia.

Through an audio conference linkup, Wiley, who is with the firm of Wiley, Johnson & Rein, spoke about the

Jan. 1 breakup of AT&T. His comments were in tune with the conference's theme, "Business Communications: Challenges for the 80s."

"I'm not saying AT&T likes the breakup," Wiley said, "but if they had to have divestiture, this one left them in a good position. The company is now in a position to be a major player in the communications game beyond the local loop."

In the unusual keynote address format, Wiley also expressed his feelings on the following divestiture issues:

- On the Bell operating

companies — "The [Bell operating companies] have a difficult road ahead. We're going to see a lot of effort made to free them up from the regulation the divestiture has placed on them."

- On costs — "We're going to see some real negative reaction to the higher local costs, the complex billing structure and the lack of good services. Congress will blame the FCC for this."

- On state regulation of the Bell operating companies — "It's unfortunate to see states limiting bypass [of the operating companies' local

loop]. While bypass will definitely hurt the [Bell operating companies], it is still the implementation of a new technology. The technologies are there, and the government has said it wants to see this type of competition."

- On other carriers such as MCI Communications Corp. and Sprint — "These companies will have a more limited access [to the long-distance telephone network] than AT&T," Wiley claimed. "If these companies are forced to raise their rates and AT&T's are lowered, the question will be 'Why go with the other carriers and

dial all those extra digits?"

"There's a real problem here. We brought you all this [divestiture] to bring competition to the telecommunications industry. We don't want to go back to a monopoly."

Wiley also suggested that all the complexity of divestiture and the confusion that will inevitably follow might have best been avoided by never bringing AT&T to court.

"The lawyers and the consultants will benefit the most from this change," he said, adding that it is probably too late to turn back now.

Exec: Users to Monitor AT&T After Breakup

By Jim Bartimo
CW Staff

SAN DIEGO — Because the Federal Communications Commission (FCC) will not regulate AT&T and the U.S. Congress will probably not legislate heavily against the company after divestiture, the responsibility of monitoring AT&T will be left to the users, according to Alan Pearce, president of Information Age Economics, Inc. and editor of the "Telecom Insider" newsletter.

"The onus of making the change from monopoly to competition lies with us, the users," Pearce said, "and I pray to God we're up to it."

Taking a relatively dim view of the coming divestiture, Pearce made his comments at International Data Corp.'s 1983 Fall Executive Conference held here last week.

Reason for Concern

One reason for his concern about divestiture is the FCC's departure from the regulation business. Due to the laissez-faire attitude of the Reagan administration, the FCC will not be looking out for users' needs, Pearce said.

"In Washington, [D.C.], the referees and the umpires [at the FCC] are going into retirement. Imagine what Sunday's games would have been like without referees and umpires," he explained, using the sports world as an example.

Calling AT&T after divestiture a "down-sized monster," Pearce said the monster would come to market angry and take its anger out on users. This will lead to two trends: Short-haul costs will increase, and long-haul costs will increase, he said.

A more positive trend will be the changing of the long-distance network from most-

ly analog to mostly digital. "This is a decision that was made early on in the data processing market," Pearce said. The same decision could have come earlier if AT&T had not had such a large installed analog base.

Another trend for users to watch is the bundling of services by AT&T. Although bundling will make it easier for users, the end-to-end service will cost significantly more. "Bundled services will play on your ignorance," Pearce said, "AT&T is going to charge you if you confess your ignorance."

Pearce said that Americans have a fascination for competition that led to the AT&T breakup. "Competition is not all it's cracked up to be. Competition can be nasty ... and confusing for telecommunications managers," he said.

Booklet Aims At Security For Micros

MADISON, Wis. — Assets Protection Publishing has made available "Microcomputers: A Checklist of Security and Recovery Considerations," which provides a set of questions designed to assist users in establishing a comprehensive protection program for micros.

The publication covers security, application backup, documentation, maintenance and contingency planning and addresses security and recovery considerations for large companies with increasing numbers of microcomputers.

Copies of the publication are available for \$1 each from Assets Protection Publishing through P.O. Box 5323, Madison, Wis. 53705.

400,000 Units

Computer Horizons Corp.

400,000 Common Shares
(\$10 par value)

with

Warrants to Purchase 200,000 Common Shares

Each Unit consists of one Common Share, \$10 par value, of the Company and one Warrant, each such Warrant entitling the holder to purchase one half share of Common Stock at a price of \$15 1/4 per share, subject to adjustment. Of the 400,000 Shares offered as part of the Units, the Underwriters are acquiring 200,000 Shares from the Company and 200,000 Shares from the Selling Shareholders. The Company will not receive any portion of the proceeds from the sale of Shares by the Selling Shareholders. The Shares and the Warrants included in the Units may not be transferred separately until December 19, 1983, or such earlier date as may be determined by Drexel Burnham Lambert Incorporated and the Company.

Price \$12 1/2 per Unit

Copies of the Prospectus are obtainable in any State from such of the undersigned and such other dealers as may lawfully offer these securities in such State.

MVS PERFORMANCE IN 3 EASY STEPS

The EPILOG™/MVS performance management system will allow you to easily analyze and manage your performance and capacity concerns.

Step 1

Discover your problems. Ask EPILOG/MVS to plot TSO response times or batch job run times (yesterday, last week, last month) on your CRT. After analyzing the workload for problems, simply place a "d" next to the problem time period and press enter. In this example, July 12 is the problem day.

DATE	RESPONSE
7/8	.4 →
7/11	.5 →
7/12	1.3 →
7/13	.4 →
7/14	.5 →
7/15	.4 →
7/19	.3 →
7/20	.4 →

Historical TSO plot for the month of July

Step 2

The result is a display of degradation reasons for that time period. Now you know the major causes of poor response. In this case, paging caused 60% of response time problems. But what is causing the degradation? Place an "r" on the problem line and press enter.

USING CPU	8%	→
PAGE-IN WAIT	60%	→
WAITING FOR CPU	12%	→
DISK SYS 001 ACTIVE	5%	→

Detailed analysis of TSO response time for July 12.

Step 3

EPILOG/MVS will automatically bring you the information needed to help analyze degradation for that time of day. In this example, Step 3 shows an analysis of paging activity where a paging device has contention from another system.

Use EPILOG/MVS for monitoring: trends, capacity, TSO response time problems, batch job run times, effect of changing hardware, and effects of making tuning changes. It's as easy as 1-2-3.

TOTAL PAGES/SEC=160
DEVICE PAGE01:
% IN USE=15%
% RESERVE DELAY=60%

Analysis for paging on July 12

The examples depicted represent only a portion of the product's full capabilities.

International Report

FROM THE CW INTERNATIONAL NEWS NETWORK

FRANCE

PARIS — France's two leading electronics companies, Compagnie Generale d'Electricite (CGE) and Thomson-Brandt, announced they will pool their resources in order to avoid competition, curb losses, increase imports and help keep France out in front with high technology. This move marks the first major restructuring in the electronics industry since it became nationalized after the election of Francois Mitterand. After an exchange of company assets, CGE will become France's premiere telecommunications manufacturer, and Thomson will concentrate on consumer and military electronic components.

PARIS — Thomson-Brandt unveiled a fully digital private switching system called the Opus 4000 here during Sicob. Based on the Motorola, Inc. 68000 microprocessor, the voice and data system reportedly features multifunction business terminals (called Communicators) and a digital switch that reportedly enables regular telephone wire to handle voice, data, text and images. The Communicator is an integrated multiservice communications system with a capacity of up to 4,000 lines and can reportedly integrate heterogeneous networks such as telephone, data processing, office automation and telex networks.

Thomson contended that the business communications market is growing at over 18% a year and is aiming its product at U.S. OEM contracts. Thomson added that 40% of its \$2 million in annual sales comes from export markets.

PARIS — Norsk Data A.S., the Norwegian vendor of the 32-bit ND-500 family of superminicomputers, unveiled a new high-end model here at Sicob. The Model ND-570/CXA boasts capabilities of 3.4 million instructions per second, according to the vendor. The basic ND-570/CXA system configuration, priced at \$300,000, consists of one ND-500 CPU, one ND-100 CPU, a multiuser operating system, a floppy disk, a system console and 2.25M bytes of main memory. The system is also said to run on the Unix operating system.

JAPAN

TOKYO — Apple Computer Japan, Inc. will market its Lisa microcomputer product family in Japan in October. Nasaya Fukushima, president of Apple's Japa-

nese subsidiary, said Lisa will appeal to the Japanese office environment, especially after Kanji character processing capabilities are added.

TOKYO — Digital Equipment Corp. Japan has developed a Japanese version of the VAX/VMS operating system software for the company's VAX-11 family of 32-bit

superminicomputers. At the same time, DEC Japan has unveiled Japanese word processing software, Japanese electronic mail and a Japanese editor.

OSAKA — Sharp Corp. has introduced a line of television receivers equipped with 8-bit integrated microprocessors. Called Micomputer TVC1, the product line

includes a 14-in. screen model (\$423) and a 19-in. screen version (\$660). With the aid of a basic five-function key box, the user can perform graphics, message exchange and tap educational and game applications as well, the vendor claimed.

TOKYO — Toshiba Corp. has unveiled a thermal color printer designed to operate

with TN-5400 personal computers. The product reportedly features seven colors at speeds of one page/min. Pricing on the TN-5400 starts at \$4,000, Toshiba said.

MEXICO

MEXICO CITY — To assist in the development of a more nationalized computer industry, representatives from several private comput-

WE SPARKED THE

Seven years ago, DATAPOINT introduced the world's first local area network, ARC[®] (Attached Resource Computer[®]), and ignited a revolution in business communications. Today ARC local area networks are electrifying businesses across the world, linking multifunction workstations,

printers, color displays, and computers throughout a single company. Every machine in the network communicates with every other machine so that they can work together.

Other manufacturers have joined the local area network revolution since then, but DATAPOINT is the undisputed leader, with more than 5,000 ARC local

er companies here demanded that Mexican government contracts for DP equipment be limited to those offered by Mexican firms. "Adequate legislation should be promoted to force the federal government to publish their requirements for acquisitions of computer goods and services far enough in advance so that Mexican firms might be able to complete

them in time," Ing. Sergio Ferragut of Cullinet International stated.

PUEBLA — A data base of metal workers and engineers has been established here by the Bureau of Subcontracting, an agency that represents about 250 Mexican contracting firms. A spokesman stated that the bureau will manage information on its

members and try to match them with the needs of subcontractors in Mexico.

SWEDEN

STOCKHOLM — "Never before has there been so much interest in a programming language as there has been in Ada," claimed Lenar Manson, a research engineer at Sweden's military research center. Ada is going to

be used in battle-control equipment ordered by the Swedish Air Force, according to the State Defense Materials Authority. According to Manson, who is one of the founders of the Ada Society in Sweden, the Swedish State Telephone Co., Ericsson Information Systems and Swedish Philips are all in the process of starting Ada projects. Industry sources claim

the Institute of Technology at Lund University is itching to start teaching Ada.

STOCKHOLM — The Swedish Data Vulnerability Board recently announced a training program designed to identify data security risks and improve data security in both Swedish commercial enterprises and government agencies. "It is impossible to determine the extent of data spying in Sweden; the victims are as silent in Sweden as in other countries. 'Nobody wants to say how bad he is at security work,'" a spokesman said. The new program, SBA-Metoden, consists of written and audiovisual material that reportedly enables managers to evaluate and identify quickly their security risks and requirements. The program costs approximately \$160 and is available from the Swedish Vulnerability Board at Datainspektionen, Box 12050, 102 22 Stockholm, Sweden.

STOCKHOLM — "We must put an end to private copying" was the battle cry sounded by big Swedish software houses and the Swedish organization for suppliers of computer and office equipment, LKD, during a recent software forum here. Iwan Bratt of LKD estimated that roughly \$10 million worth of revenues are lost each year due to illegal copying. "The serious problem is not so much 'buddy copying' of games between youngsters, but theft of expensive professional programs," Bratt maintained. To help combat private copying, LKD has established a special legal department and is closely cooperating with Sweden's major software companies in order to track their anticopying efforts. Swedish legislation has not kept up with the technical developments very well, Bratt said, and few, if any, cases of illegal copying have been brought to court.

WEST GERMANY

RUESSLSHEIM — A radical group calling itself "Rote Zellen" used explosives last week to blow up one of Germany's major machine factories, Maschinenfabrik Augsburg-Nuernberg AG (MAN), leveling the data center of the manufacturer. Damage is estimated at \$7.4 million. The group claimed responsibility for the act in a letter stating that MAN was building transport vehicles designed for Pershing II rockets, due to arrive in the federal Republic of West Germany this fall.

SAS/GRAPH brings you Instant Replay

Since its introduction in 1980, SAS/GRAPH has provided "state of the art" software for business graphics. Now SAS/GRAPH brings you a new decision support tool—instant replay.

With the menu-oriented replay facility in SAS82 (our newest release) your DSS group can

- 1 generate numerous graphical analyses and store the results.
- 2 choose the best graph—charts, plots or maps—from the annotated selection, SAS/GRAPH provides and
- 3 instantly display the graph with the touch of one PF key on your IBM 3279.

It's as simple as 1 + 2 + 3. And that adds up to a big time-savings.

Think of the flexibility instant replay adds to your operation: Your DSS staff can run overnight batch jobs to graph CPU utilization reports, sales totals and production figures. The reports are ready for display at your desk the next morning.

Best of all SAS/GRAPH™ is integrated into the SAS system, so you can get the benefits of SAS for data management, statistical

analysis and report writing; SAS/ETS™ for econometric forecasting and modeling; SAS/FSP™ for data entry, editing and letter-writing; and SAS/IMS-DL™ for interfacing to IMS data bases. The SAS system operates on the IBM 370 Family and compatible machines at more than 5000 OS/MVS, VM/CMS, DOS/VSE and SSX sites around the world.

Australia's Tax Break Plan Gets Warm Reception

By Alan Power
Australasian CW

CROWS NEST, Australia — The Australian federal government's high-technology investment incentive tax scheme, which was approved by cabinet Sept. 16, has been warmly received by both the computer industry and the finance sector, although there is some concern that the scope of the scheme may be too broad.

The concern is that areas such as agriculture, fishing, forestry, architectural surveying and engineering consultant services, which are included in the scheme, may not be relevant to high-technology development and may erode the venture capital opportunities open to other specific industries.

However, the Minister for Science and Technology, Barry Jones, defended the plan by saying the government had followed the proposal committee's recommendations to the letter, and these areas had been included in the recommendations.

Under the plan, the government will forego about \$18 million in tax revenue by giving investors in high-technology industries a 100% tax deduction on their investments. According to Jones, the total funds available for investment in the current fiscal year will amount to \$39 million if all investment comes from the corporate sector.

Investments in high-technology companies will be from licensed management and investment companies which will be administered by a management and investment company licensing board.

Companies eligible for venture capital under the scheme will operate in the

following fields: manufacturing, agriculture, fishing, forestry, postal, telephone, telegraph or teleprinter communications production, architectural surveying, consultant engineering, education/training and scientific services, computer software, data processing

services and biotechnology.

"The point is that in terms of the 24 nations in the OECD [Organization for Economic Cooperation and Development], we rank 23rd in high-technology production. Time is running out for us; we have got to move very quickly," Jones declared.

The general opinion of the finance sector was that the scheme was a positive step forward not only in fostering the development of high technology in Australia, but also in creating an indigenous venture capital market.

Harold Tilley, the general

manager of Business Loans and Equity Capital Ltd., a joint venture between Westpac Banking Corp. and UK banking interests, said that while there were reservations about the breadth of the scheme, it is a positive encouragement to Australian high-technology development.

Power is the managing director of Australasian Computeworld.

International Report

Getting your system in front of management is finally made simple.

Now your system can be accessed quickly and easily with Northern Telecom's Displayphone terminal. It's as simple to use as a telephone. And compact enough to fit on everyone's desk.

Perhaps the most difficult part of your job is getting your system in front of the people who would benefit from it most. Management often finds computer terminals too bulky or too complicated to operate. As a result they shut themselves off from information that can be vital to your company's productivity.

MIS professionals in a variety of industries have discovered the Displayphone* terminal, an ideal solution to the problem of user acceptance. Voice and data are integrated into one compact unit whose sophisticated capabilities are so easy to use, everyone will welcome it on their desks.

Menus of features and functions, visual prompts and terminal-resident soft keys guide even novice data users through correct operation easily. And soft keys can also be downloaded from your host computer for single key activation of program commands. As an advanced business telephone, the Displayphone unit brings the convenience of voice features such as directory dialing to data calls, and allows simultaneous voice and data communications.

In addition to its ease of use, the Displayphone terminal offers powerful data access capability.

It is an asynchronous terminal that can also be configured to operate in IBM 3270 and other sophisticated computer environments. This flexibility gives users high speed access to a full range of corporate and public data bases.

The Displayphone terminal is an exciting example of Northern Telecom's commitment to the OPEN World—our approach to information management that combines telecommunications and computer technology in innovative ways to increase productivity, save time ... and money.

To find out how productive the Displayphone terminal can be for your company, call 800/621-6476. (In Illinois: 800/572-6724; in Canada: 800/268-9079), or send in the coupon.

OPEN World.
the rational approach to information management. It's the best of all possible worlds.

Bank School Set for Oct. 8

WASHINGTON, D.C. — The American Bankers Association (ABA) has announced that space is still available for the 1983 Trust Management School, Oct. 8-14, at Northwestern University in Evanston, Ill.

The week-long program will concentrate on general management concepts and specific trust management skills for banking executives. The 1983 program theme is strategic planning.

The cost is \$1,950, which includes tuition, room, meals, program materials and school-related activities. Information is available from Victoria L. Street, ABA, 1120 Connecticut Ave. N.W., Washington, D.C. 20036.

Processor Glitch Interrupts Service to 18,500

By David Myers

CW New York Bureau

FREMONT, Calif. — A breakdown in a single electronic connector drove the Pacific Telephone Co.'s central processors insane earlier this month, leaving 18,500 phone users here without service for three-quarters of an hour.

John Vautier, control and analysis supervisor for Pacific Telephone, said the breakdown caused a plug-in circuit pack to "blitz" the entire phone system, wiping out "a certain percentage" of computer memory.

"It blitzed the central processors and wouldn't shut up. It kept putting out garbage. It made the central controller more or less insane," Vautier explained.

As a result, the computer's Western Electric 32K-byte ferrite-core memory device forgot phone numbers that had been changed or added to the system in the last 2½ weeks.

Phone company technicians had to erase the rest of the computer's temporary "call-store" memory and feed the phone numbers back into the system from floppy disks where the recent service changes had been recorded, Vautier said. The whole process took 15 hours.

The crisis started late in the afternoon on a hot day in this San Francisco Bay Area city.

Fremont's city hall, police department, libraries and emergency center all lost phone service.

Anyone trying to use his phone

heard "a gong-like sound, like a cable slapping against a flagstaff, while in the background there was a song of many numbers being dialed at once but no one answering," *The Oakland Tribune* quoted one phone user as saying.

Ken Dunham, spokesman for the phone company, originally blamed the outage on temperatures that hit 84 degrees that day. Later Dunham said the heat had been "discounted" as a possible cause for the computer's lapse in memory.

But Vautier told *Computerworld* that heat might in fact have caused the problem.

"It cannot be ruled out. We know circuit packs are sensitive to heat, and though the temperature that day

was well within their operating limits, the cooler in the building was driving temperatures up and down all day. My feeling is that rapid changes may be more harmful than a rapid heat increase," Vautier said.

Whatever the reason for the failure, however, Pacific Telephone is taking steps to prevent its computer from forgetting any more phone numbers.

Vautier said the phone company is going to "a newer type processor" with on- and off-line disk files and memory residing in several locations.

The new processor is also manufactured by Western Electric, but the disk drives are made by Burroughs Corp., Vautier said.

"Divestiture gave us the chance to look at equipment from other manufacturers. Now all the [Bell] operating companies are looking for the best dollar value. We aren't necessarily locked into one manufacturer any more," Vautier said.

Video Packages From Deltak Eye Communications

NAPERVILLE, Ill. — Deltak, Inc. has made available two videotape conference journals containing edited highlights from speeches given by experts and policymakers in the communications industry at the fifth annual Communication Networks Conference held earlier this year in New Orleans.

The packages, produced by CW Communications, Inc. of Framingham, Mass., are said to provide industry information for executives and communications professionals who were unable to attend the conference. Each videotape in both series runs about 30 minutes and is said to be intended for busy executives and group presentations.

"Communication Networks: Alternatives for the '80s," Series 7CW-D99, features excerpts from speeches given by Federal Communications Commission Chairman Mark Fowler, former American Bell, Inc. President Archie McGill and Dr. Dixon Doll on topics such as short-haul microwave, private branch exchange technology, communications processors and satellite technology. The series is made up of five color video sessions.

In four video sessions, "Local-Area Networks: The Major Considerations," Series 7CW-E99, offers excerpts from the speeches of data communications pioneer Dr. John McQuillan, Diana Last, Dr. Kenneth Thurber and Dr. Howard Frank. The sessions focus on the capabilities and architecture of local-area network communications and the baseband vs. broadband debate, including how to choose the best systems for needs, flow control and diagnostic network monitoring.

The packages can be purchased or rented through Deltak's flexible Delatvision Library Plan. Purchase price is \$150 per videotape or \$600 for the series from Deltak, East/West Technological Center, 1751 W. Diehl Road, Naperville, Ill. 60566.

PCOX™ LOVE TO TURN PC'S INTO THINGS OF BEAUTY.

PCOX. The beautiful interface to turn your PC's into fully functioning, intelligent work stations. PCOX are the high-performance PC-to-host system connections. Just drop one into a PC slot, and you're ready to go, without any host system or application software changes.

The PCOX package integrates both your software and hardware. It's easily attached by coaxial cable to your IBM 3274/76 cluster controller for perfect 3278/9 emulation. PCOX are the fast, simple, cost-effective way to integrate your PC's into IBM host networks.

With our efficient PCOX, you enjoy full screen capability—with no jerking, flickering or waiting. And

PCOX software offers an optional utility giving you menu-selected file transfers between your PC and the host system.

For all the attractive details about how the PCOX can brighten your life, simply contact us today.

In Providing Information for Lodging Hotel System to Assist '84 World's Fair Attendees

NEW ORLEANS — If your heart is set on visiting the 1984 World's Fair and you discover that your favorite hotel is already booked solid, relax. You'll have plenty of help finding alternative lodging with the aid of a \$400,000 computerized hotel referral system donated by Qantel Corp. of Hayward, Calif.

According to William Chernish, president of Qantel distributor Sunbelt Business Computers, Inc. based here, the computerized referral system was actually donated to the University of New Orleans' School of Hotel, Restaurant and Tourism Management, which has made the system available for use during the fair.

With the help of representatives from the Greater New Orleans Hotel-Motel Association, the Greater New Orleans Tourist and Convention Commission and the Louisiana Hotel-Motel Association, students from the school will operate the system, which was designed to give callers a wealth of information, including hotel availability for specific dates, a rating of each hotel and the hotel's address and telephone number.

Heart of the System

At the heart of the computerized referral system is Qantel's System 64 minicomputer equipped with a streaming tape drive, a 400M-byte disk drive and 10 Qantel VT 3 terminals. The System 64 will operate under the company's Hospitality and Leisure software package, which was designed for use in the hotel industry.

JCIT to Meet In Jerusalem May 21-25

SILVER SPRING, Md. — The Fourth Jerusalem Conference on Information Technology (JCIT) will be held at the Jerusalem Hilton in Israel from May 21-25.

Sponsored by the Information Processing Association of Israel and the Institute of Electrical and Electronics Engineers, in cooperation with the Association for Computing Machinery, JCIT will cover a broad range of topics on computer technology and applications and explore the economics and management of the information industry, with an emphasis on software engineering and manufacturing.

The technical program will consist of papers by prominent invited speakers, submitted papers, panel discussion, workshops and exhibitions.

Registration fees prior to May 1 are as follows: participants are charged \$200; senior executives are charged \$200; students are charged \$100; and accompanying persons are charged \$100. After May 1, fees are: participant, \$225; senior executive, \$225; student, \$115; accompanying person, \$115.

Further information is available from JCIT-4 through P.O. Box 639, Silver Spring, Md. 20901.

Chernish said the referral system will be tied to the fair's main information center using the company's Bestnet local-area network system. The system has been installed in a building adjacent to the fair site on the banks of the Mississippi River and is currently undergoing a 30-day shakedown run. Fair officials hope to have the system in use by November.

"It's a very simple system to use, but it's going to be very useful in assisting people who are trying to find accommodations for the fair," Jeffrey Stack, vice-president for marketing for the fair, said.

According to Stack, the Qantel system will only be used as a backup

to the hotels' own reservations systems. If a particular hotel is booked, a caller will be given the number of the referral system, which will then direct the caller to alternative lodging.

Operators of the computerized referral system will not make reservations for callers and will not accept any money for hotel bookings. Organizers hope to avoid the problems that plagued the Knoxville, Tenn., World's Fair hotel reservations system — problems that led to millions of dollars in lawsuits from irate visitors.

"The Knoxville system resulted in massive lawsuits," Stack said. "They

just simply overpromised. We are in the business of running a fair, not making hotel reservations. This system is designed simply to give visitors a source of information."

Organizers of the fair, which will revolve around the theme "Rivers of the World: Fresh Water as a Source of Life," expect approximately 11 million visitors to attend the event here, which will feature pavilions from 25 countries, eight major corporations and a number of states. Stack said that among the attractions will be pavilions highlighting space, transportation, flight and the world of high technology. The fair will run from May 12 through Nov. 11.

CONNEWS.™ THE APPLICATION MENU THAT GIVES YOU THE HOT NEWS AND THE COLD FACTS.

CONNEWS is the user-friendly ACF/VTAM software product that lets 3270 users select from a convenient application menu or view up-to-the-minute information from an electronic bulletin board. No systems modifications are required.

CONNEWS. It's the MENU that really satisfies your taste for applications, and installation NEWS. Some of the more desirable entrees include:

- Customized Company LOGO displays
- Individual MENUs for specific terminal groups

- Terminal ID permanently displayed
- Operator MODIFYable "HOT NEWS" area
- Availability status for menu entries
- 999 page electronic Bulletin Board
- Single or Multi Domain operation

If you want your menu to be easy-to-read, friendly, and highly flexible, CONNEWS is the one for you. Call us today to make a reservation for a FREE TRIAL.

cx CXI, Inc., 10011 N. Foothill Blvd., Cupertino, CA 95014 (408) 725-1881

There isn't another in the world able to as advanced as For five go

1. The Millennium environment is borderless.

Unlike any other company's software packages, Millennium packages aren't walled off from each other by separate programs and commands. So you can cross instantly from one system to the next. You can ask a question in general ledger, immediately seek an answer on-line in accounts payable, and follow the track wherever it leads. Into fixed assets, purchase order management, anywhere. While traditional packages force you to work within the narrow confines of a given application, Millennium creates a limitless environment that enables you to access applications at will. With a single key, you're free to explore the vast entirety of your information universe. No other system works like Millennium, except your own mind.

2. Millennium has common functions across all applications.

Let's say you have a half dozen different packages. General ledger, accounts payable, and so on. In the

past, that meant doing everything a half dozen times. Learning the different programs and commands for each application. Training users in data entry procedures for each one. From a training and service standpoint, Millennium is infinitely less complicated because the same set of functions governs all applications. You use, for example, the same real-time update procedures for accounts payable as fixed assets. Functions never change, only the data that defines the particular application. Once you learn one set of functions, you've learned them all. And you quickly find you're faced with a much lighter load of training, documentation and support requirements.

3. All Millennium systems are real-time, on-line.

Working in the borderless environment, you perform routine file maintenance on the spot as you cross from system to system. You can update fields, records or any other information in your files instantly. There's no waiting for batch processing. You get accurate, up-to-

software company give you anything Millennium. od reasons.

the-second information the moment you need it.
Today, not tomorrow when it's too late.

4. All Millennium systems are secure and friendly.

Although Millennium is borderless, the security is tighter than any border patrol. Totally comprehensive and user defined. You can set up any restrictions you want, right down to the field level.

Even the on-line HELP feature in Millennium is user-defined. Not only do you get comprehensive on-line documentation from McCormack & Dodge. But you're able to enter your own specific instructions and requirements on-line into the HELP data base, exactly the way you want them. This gives you complete flexibility to define corporate policies and procedures.

Millennium has a special ScreenPaint function that lets you design your own terminal screens quickly and easily. You can see and use your new screen format in a matter of seconds.

support offices throughout North and South America, Europe, Asia, Australia and Africa.

5. Millennium offers an interactive PC link.

This gives you an enormously powerful and effective managerial tool. Without leaving your desk, you can open up your mainframe to the analytical powers of your personal computer. You can selectively download specific data from the mainframe and study it, manipulate it and graph your results. When you've finished you can upload the data back to the mainframe in minutes.

Clearly, Millennium is the software of tomorrow. But only McCormack & Dodge can install it today.

Introducing Millennium. Tomorrow's software today.

Call for Papers

OFFICE EQUIPMENT EXPOSITION/OFFICE INFORMATION SYSTEMS CONFERENCE (Coe/OIS), Rose, Ill. June 19-21, 1984.

Papers are sought for presentation in the technical program at the eighth annual Coe/OIS. The OIS conference will augment Coe, a comprehensive exhibition encompassing computers, software and peripherals, office information systems, word processing systems, data and telecommunications, office furnishings and other related products.

Abstracts are solicited in the following or related subject areas: new developments and applications of software business operations, communications, networking, data base management, word processing and interconnection of computers, data base management and systems, distributed data processing, computer systems for small businesses, mainframes, minis, micros and portables, applications and development and graphics.

Abstracts are also needed for the following

communications/networking: voice, data,

video (new development), local-area network, private branch exchange, integration and wide-band networks.

Information systems management: design, planning and implementing, effective information systems for business planning and operations.

Office automation: integrated office automation systems, effectiveness, benefits of office automation, management and administrative support systems, office automation applications and new developments.

Word/information processing centers: new developments, user application case histories and specific task implementation.

Authors are invited to submit 200- to 300-word abstracts of their proposed papers by Nov. 15. Papers will be selected and authors notified on or about Jan. 15. Abstracts should be submitted to Coe/OIS Program Coordinator, Cahners Exposition Group, Cahners Plaza, 1350 E. Touhy Ave., P.O. Box 5060, Des Plaines, Ill. 60018.

THE CUSTOM INTEGRATED CIRCUITS CONFERENCE, Rochester, N.Y., May 21-23, 1984.

Original papers are solicited in the following areas as they relate to custom devices and integrated circuits.

Computer-aided design: device and process modeling, circuit simulation, layout verification, testability and very large-scale integration design aids.

Gate arrays, semicustom and full-custom integrated circuits: trade-offs and design techniques, complementary metallic oxide semiconductors (MOS), N-Channel MOS, bipolar and gate arrays.

Custom analog integrated circuits: smart sensors, imaging arrays, signal processing and transform implementation.

Applications: industrial, automotive, consumer, communications and medical. Designed integrated circuit systems on chip.

Fabrication technologies: silicon and nonsilicon, mixed processes and direct wafer writing, interfaces and packaging: voltage/current

translators, hybrids and interconnects.

Testing and reliability: design for testability measurement techniques.

Authors are asked to submit 50 copies of a 250-word summary and a 35-word abstract representing original, unpublished work suitable for a 20-minute presentation. Deadline for submission is Dec. 30. Papers received after December 30 will be considered late papers. The author's name, affiliation, complete address and telephone number must appear on the summary. Notice of acceptance will be mailed by Feb. 10. Authors of accepted papers will be required to submit a manuscript by March 16 of up to five pages, including figures, in camera-ready format for publication in the conference proceedings. Late papers received by March 1 will be considered for a 10-minute presentation.

Abstracts and other correspondence should be addressed to Dr. Wesley N. Grant, Technical Program Chairman, Sperry Computer Systems, Sperry Park, P.O. Box 43525 MS Y11B1, St. Paul, Minn. 55164.

FIRST ANNUAL ASSOCIATION FOR COMPUTING MACHINERY (ACM) NORTHEAST REGIONAL CONFERENCE: INTEGRATING THE INFORMATION WORK PLACE — THE KEY TO PRODUCTIVITY, Lowell, Mass., March 19-21, 1984.

The conference will concentrate on topics with near-term applicability to both the business and industrial computer environments. Particular emphasis will be placed on how the professional can use the many tools currently available to create a more productive environment.

Papers are sought for the following topics: integrated manufacturing (computer-aided design and manufacturing), artificial intelligence, power personal/professional workstations, office automation, decision support systems, distributed and centralized data base management systems and local and wide-area networks.

Additional information on submitting papers may be obtained from Lloyd Howells, Program Chairman, ACM Northeast Regional Conference, P.O. Box 499, Sharon, Mass. 02067.

DPMA's Palmer Named Director At NCGA

FAIRFAX, Va. — Edward J. Palmer, executive director of the Data Processing Management Association (DPMA) of Park Ridge, Ill., has been named executive director of the National Computer Graphics Association (NCGA).

Palmer, who will take over the position in October, will be responsible for managing overall planning and programming and will serve as liaison between NCGA's staff and the board of directors and executive committee.

Palmer joined DPMA in 1976. He holds a degree in business administration from Boston University and a certificate in data processing from the Institute for the Certification of Computer Professionals.

FREE 82-PAGE BOOK EXPLAINS TRANSACTION PROCESSING.

A new 82-page book, "SYNAPSE TRANSACTION PROCESSING SYSTEM OVERVIEW," clearly illustrates how a systems designer can accelerate development of a high-performance, fault-tolerant, on-line transaction-processing system.

It discusses automation of integrity and recovery. Tells how to get performance from a Relational DBMS. Describes transparent expansion of a system on-line. And it has a complete index.

The book presents a comprehensive, management-level introduction for the nontechnical manager. Yet it provides an adequate overview for the technical manager and staff.

To obtain a free copy, call (408) 946-3191. Or write: Synapse Computer Corporation, Corporate Communications Department CW, 801 Buckeye Court, Milpitas, CA 95035.

Why Do MIS Directors and Users Love Their New Davox Terminals?

MIS Directors Love Us For Our Compatibility.

All Davox models combine true 3270 emulation (Bisync and SNA/SDLC) with ANSI-compatible Async and screen printing.

Simple software configuration quickly adapts each terminal to new computer systems, with no hardware changes.

And Davox's unique approach to eliminating coaxial cable is the most flexible and cost-effective in the business.

Users Love Us For Our Ease of Operation.

New users find Davox terminals very friendly to use, reducing the time

needed to learn new functions.

With the touch of a single Smart Button,* users can instantly perform complete data or voice tasks—3270, ASCII, personal computing, or phone—tasks that normally require many manual steps.

The optional integrated featurephone system is both powerful and comfortable to use. Numbers can be dialed automatically from the terminal's Personal

Directory, or from a large directory maintained on a host computer—ideal for telemarketing applications.

And Everyone Loves Us For Our IBM* Personal Computer Attachability.

Davox terminals are the first designed to connect directly to any IBM Personal Computer, providing instant access to off-the-shelf PC programs.

The touch of a single Smart Button instantly adds the power of personal computing to the terminal, either as a dedicated PC or as one shared by other users.

Let us show you why everyone loves their new Davox terminals. For more details, call us at: (603) 424-4500.

Critical to Successful Data Control Management of I/O Bottleneck Key, Exec Warns

By Robert Batt

CW West Coast Bureau

SAN FRANCISCO — Managing the I/O bottleneck will be the key to the successful management of data within an organization, the recent IBM Futures Conference here was told.

Gene DeKoster, vice-president of planning and requirements at Storage Technology Corp., said there will be new architectures and more ways of performing I/O functions in the next five years than there have been in the previous quarter century.

"Connectivity to the information base will be critical and will result in control passing away from the data processing center to the users. We have to understand what is happening in the market and to applications to assess correctly our response," he told his audience of DP managers and professionals.

Demanding Answers Now

Users are demanding answers now, he added, and are not willing to wait for the DP department to catch up with its backlog.

"The whole system is under stress. There are 25 million office terminals alone waiting to come onto mainframes. This is going to cause a huge data connectivity problem, and migration is essential both within the DP shop and without," he said.

To be successful in this arena, the former IBM technician continued, companies will need to be vertically integrated. They will have to manage multiple technologies within a system environment.

Venator Named To Replace DPMA Director

PARK RIDGE, Ill. — The Data Processing Management Association (DPMA) has announced that John A. Venator, deputy executive director of DPMA, has been named acting executive director following the resignation of DPMA Executive Director Edward J. Palmer.

Venator, who has served DPMA since 1977, became deputy executive director in 1981, adding the duties of that position to his responsibilities as director of marketing and membership programs and services, a DPMA spokesman said.

Edward Palmer, who was DPMA executive director since 1976, is leaving the association to take a similar position in the Virginia area. Palmer has been a member of DPMA since 1961. He had served 24 years in all areas of information processing, operations and administration prior to serving as DPMA executive director from 1976 to 1983, according to the spokesman for DPMA.

Venator will direct a headquarters staff that supports the membership and educational programs of DPMA, which has 32,000 members who are computer management executives in industry, business, education and finance as well as a computer student population of 11,000.

This will require effective application of innovative technologies, he stressed, including optimized CPU resources, automated handling techniques and increased performance/capacity ratios.

New storage systems must be developed, he added, and new maintenance methodologies defined to include remote maintenance — designing the actual maintenance facility within the storage device.

But DeKoster warned against so-called panaceas. A single device or technology cannot solve the variety of storage systems requirements, he contended, because of the wide spectrum of such requirements.

CW at IBM Futures

"Knowing what data is on what technology at what time and for what purpose and being able to manage those questions is going to be the problem of the future in the storage arena," he said.

DeKoster cautioned against being "carried away" with the potential of device technology, such as thin-film-head technology. Performance, he noted, has not kept pace with increases in capacity. It is the data path,

he asserted, where the problems lie and which needs to be fixed, not the devices.

As a result, he continued, innovative new packaging techniques are vital. "Data path is the key, and data management is the solution," he said.

DeKoster also warned against an industry trend toward erasable data. It is a moot issue, he insisted, because the value of data through time can often be enormous. "Information is not changeable. In fact, users do not want to change data; they want to refer to it, and the cost of storing data is the only consideration to be dealt with," he concluded.

EVERY COMPUTER COMPANY TALKS SERVICE UP FRONT. BUT HOW MANY OF THEM CAN BACK IT UP?

These days, you've got to be real careful that the service a company promises you is more than just lip service.

Because if something goes wrong with your new equipment, and their service isn't right, you've just bought yourself a real headache.

At ITT Courier, we've been around long enough to know you can't sell customers short when it comes to service.

So we back up every ITT product with 150 service centers in North America alone.

We staff every one of those ITT Service Centers with field engineers who get their training at our state-of-the-art service school, not on your equipment.

And we give every ITT customer the security of a 24-hour service hotline, seven days a week.

Of course, no company can promise you a fail-safe product. But at ITT Courier, we're very proud of how quickly we can rise to the occasion should your system ever go down.

ITT Courier Service. It's one important reason we'll be around long after a lot of those other companies are long gone.

Contact your nearest ITT Courier Representative. Or call the ITT Courier Sales Support Department at 1-800-528-1400, toll-free.

AI Applied to OA Eases Human Interface: Exec

By Cheryl M. Gelb
CW Staff

PARIS — Making a strong commitment to human-oriented design principles, Japan's Toshiba Corp. has found that "the application of artificial intelligence techniques to office automation systems is currently feasible and improves the human interface."

So said Kenichi Mori, manager of Toshiba's Information Systems Laboratories, at the Ninth World Computer Congress held here recently by the International Federation for Information Processing (Ifip).

In the past, Mori told a large audience eager for news of Japanese advances in OA, engineers have endorsed a machine-oriented design

principle with the objective of enhancing machine efficiency.

But, Mori asked, "can engineers continue to design new machines using old machine-oriented techniques?" The answer is clearly "no" if automated office systems are "to be of simple use and as helpful as possible for all levels of office workers, from executive managers and professionals to clerical and secretarial staff."

The solution thus lies in a commitment to a human-oriented design principle which has as its objective the enhancement of human efficiency, Mori said. The result of this approach is a product whose size and shape is fit for human environments. Commands to the machine are made

in "human communication media," including "voice characters and graphics," according to Mori. Moreover, the machine can be used by an unskilled operator.

"The ideal machine," Mori added, "should allow the worker in an office to communicate with the machine in natural forms of human communication."

With this creation of office systems that ease the human interface, Toshiba has also developed four systems by applying AI techniques. The four systems include a word processor capable of converting Kana (Japanese) to Kanji (Chinese), a voice activated word processor, an optical character recognition (OCR) system that reads hand-printed Japanese

characters and a line-drawing interpretation system that converts hand-drawn graphics into printed output.

Using AI Advances

Toshiba was able to develop these systems, Mori pointed out, "because the field of artificial intelligence is providing advanced techniques. The primary feature of this advance is the use of knowledge-based assistance to recognize and understand" the forms of human communication that are "natural" or relatively unsophisticated.

Before discussing the development of Japanese word processors, Mori reminded his audience that the Japanese language consists of both Kanji and Kana characters. Typically, more than 3,000 Kanji and 50 Kana characters are used in everyday business communications. "The abundance of Kanji characters," Mori said, "has impeded the introduction of office automation systems" in Japan.

While Kana can be used exclusively, the resulting document is often awkwardly worded. Toshiba developed both a Kana-to-Kanji translation technique and a true Japanese word processor that contains a 30,000-word dictionary and permits input at 50 to 120 char./min.

"Now, for the first time in Japan, typing is faster than handwriting," Mori quipped.

To extend OA systems to managers and others unfamiliar with key operators, Toshiba next developed a voice-activated word processor. The user speaks slowly into the machine which "comprehends" the syllables and then converts the speech into Kana. A microprocessor containing the knowledge base then translates the Kana into Kanji.

'Not So Fast'

This input speed of the voice-activated word processor is 100 syllables per minute — "not so fast," Mori admitted — however, with the application of the knowledge base, it recognized 30,000 words and is 99.8% accurate.

Toshiba has also developed an OCR system that recognizes hand-printed characters. This accomplishment is notable, Mori said, because the structure of Japanese characters — of which 3,000 are in common use — is very complex, and many characters clearly resemble other characters.

Toshiba's OCR machine reads 50 hand-printed char./sec and is generally 95% accurate; however, with the application of the knowledge base, the machine is 99.6% accurate, Mori reported.

The fourth AI-based OA system developed by Toshiba is the hand-written, line-drawing interpretation system. This converts hand-written graphics, such as charts, into machine output. The user can predefine 200 symbols, Mori noted.

"These examples represent the leading edge of technology in the direction of friendly interface man-machine systems," Mori concluded, adding, however, that much work remains to be done in natural language processing, continuous speech understanding and knowledge-based systems.

Accept no substitutes.

If you're looking to buy a dBASE-like system, you'll really like dBASE II®

dBASE II is the relational database management system (DBMS) we introduced to the microcomputer world in 1980. It was the best, most powerful and easiest-to-use database management system available.

It still is.

You'll wonder how you managed without it.

Because it's so powerful yet so easy to use, dBASE II has become the standard for managing data with a microcomputer.

Doctors and lawyers, accountants and salespeople, stockbrokers and students, big businesses and small are all managing their data better with dBASE II. Books have been written about it. And other microcomputer data handling programs measure themselves against what dBASE II can do.

dBASE II turns data into a company resource.

dBASE II starts where file handling systems (such as our own Friday!™) leave off.

You get a running start on your business solutions because dBASE II includes a complete hands-on tutorial. You can quickly and easily create a full business information system because all of your data is at your fingertips. Using English-like commands, you add, delete, edit, display, print and manipulate your information.

Once you've decided on what you want done, you save the instructions so that even your least experienced personnel can perform the most complex business functions with two words: *Do Invoices, Do Payroll, Do anything that needs to be done.*

Your data and your programs are independent, so you can change one without changing the other; in fact, change the way you do business without destroying what you've done.

And dBASE II even simplifies conversion from your present system, and can handle data from other programs, or create files that other programs can use.

It's the most advanced information management tool available for your microcomputer. And it's only \$700 (suggested retail price).

The best selling DBMS known to man.

dBASE II struck a responsive chord in the business community when it was introduced and quickly became the best selling database management system made for any computer, micro or mainframe.

To see why, drop by your nearest computer or software store and ask for a demonstration. Then take a package home and use it for 30 days. If it's not everything we said it was, return it and get your money back.

But we think you'll keep it
Can over 150,000 users be wrong?

Merger of Needs Cited as Key to Data Base Use

By Paul Gillin
CW Staff

PARIS — Important barriers need to be broken down before artificial intelligence and other high-powered applications of data bases can be made practical. That was the consensus of two data base experts who discussed "Data Models and Knowledge Representation" at the recent International Federation of Information Processing (Ifip '83) Conference held here.

"It's become quite apparent that if we are going to reduce the cost of using computers we have to make it easier for people to design and use data bases," asserted Antonio Furtado, a professor at Pontificia Universidade Catolica in Rio De Janeiro. But

to do that we first have to come to some sort of agreement between the different interests of those who use the data base, he said.

Furtado said that efforts to standardize data base architectures have typically centered on very different needs. "Those that emphasized efficiency [such as network and hierarchical models] were based on navigation," Furtado added. "However, these models have been criticized on semantic grounds. People felt that those data models are too close to physical files and not close enough to reality."

Efforts to fill the gap between physical files and reality have evolved into a two-stage process, he said. The data model is typically

close to the physical files, but ways to create an "information model" that is helpful to the user have stirred controversy.

Some solutions such as order logic and abstract data types have been criticized for straying too far away from artificial intelligence applications, while interfaces like semantic networks and frames and scripts are considered too close to artificial intelligence.

"There is some pressure toward creating better data models," Furtado said. These include nonconventional techniques like text, speech and image interfaces as well as time dimension stored facts and inferential data bases, active systems, decision-support-like systems with data base com-

ponents and expert systems.

Furtado would not recommend which method was best but said the fundamental question was how to satisfy the three major interest groups that are involved.

Designers, Implementors, Users

On the other hand, designers want to see semantic complexities and are concerned with what he called "expressive power." Implementors are concerned with machine complexities and generally want to improve efficiency. Users, however, do not want any complexity. Their first priority is simplicity, he said.

"Each of these guys should see the data base as they want to see it," he said. Until these conflicts are resolved, "it may be too soon to have very large data bases with knowledge-based techniques," he said.

Without offering a specific solution, Furtado recommended that simplicity is the criterion to attack first. The data dictionary is a good abbreviated frame of reference from which users could work. "Since this is much smaller, it is perhaps the place to start to help users use the data base more efficiently," he recommended.

Programming in its current form is totally unsuited to knowledge-based systems concepts, stated Carl Hewitt, a professor at MIT. Hewitt argued that data base management systems (DBMS) will actually play a very small role in the future of knowledge-based systems because their logical programming structure is inherently unsuited to the task. DBMS designers have focused too much on how systems are currently implemented rather than on how they should be implemented, he said.

Logic's Limitations

Praising Socratic Logic as "a marvelous achievement," he nevertheless stated that it has implicit limitations in programming. Those who are working toward knowledge-based systems should first try to understand those constraints, he said. "All state-of-the-art data base designers should take a compulsory course in logic and realize a lot of the things they're missing," he said.

Logic was defined to describe things, whereas knowledge systems are intended to "take action," Hewitt said. Logic is inherently inconsistent while logic programming strives for consistency.

To be effective, knowledge-based systems need to tolerate that inconsistency, he said.

"In most current DBMS, if you can't say something is not true then you can't say anything about it at all," he said. "As a result, standard semantics are not good for empirical knowledge."

The move toward open, distributed systems requires a structure that accommodates inconsistencies between the systems, which logic programming does not, Hewitt said. "Logic implementation and quantification are not suitable for this open, knowledgeable environment," he said. "We need a whole new logic structure to optimize the uses of logic in data management."

Announcing training from the creators of the UNIX Operating Systems.

Now everyone can get top quality UNIX Operating Systems training, from the people who created them—Western Electric and Bell Laboratories. Along with our certified instructors, we offer a complete curriculum for UNIX Operating Systems, including UNIX System V.

These courses are the same as those conducted internally at Western Electric and Bell Labs. And we furnish them at your location or at one of our conveniently located centers: Princeton, NJ; Chicago, IL; Columbus, OH; and Sunnyvale, CA.

We provide an individual terminal for each student. And in the evening, the use of our facilities and terminals is available at no extra cost. In addition, volume discounts are available.

All UNIX Operating Systems courses are designed and developed to high quality standards by Western Electric and Bell Labs, as part of a total commitment to UNIX Operating Systems Support. Now with our training, you can learn firsthand, what everyone else has been teaching secondhand.

For information, call us at 800-221-1647 or write to Western Electric, P.O. Box 2000, Hopewell, NJ 08525.

SOFTCON. THE MOST IMPORTANT COMPUTER INDUSTRY EVENT IN 1984.

Everyone is talking about Softcon, the international conference and tradefair for the software industry.

It's the first computer show where the really important new products aren't lost in a sea of hardware knock-offs and look-alikes.

All of the biggest names in software will be there—plus some remarkable ones you haven't heard of yet. Companies from around the world will debut the newest, most innovative developments in software. From Abacus to Zyword.

At Softcon, nearly 1000 exhibits will showcase more than 12,000 software products for professional, home, education, entertainment, office, business, industrial and vertical-market consumers. Hundreds of landmark products will be shown for the first time anywhere at Softcon.

More than 60 seminars, panel discussions, forums and workshops will explore the latest trends in software retailing, publishing, standards and trends.

Softcon is so extensive that it has already become the third largest computer show. Ever.

Softcon is open to the trade only. If your company sells computers, software, office products, consumer electronics or books; if you're a volume software buyer (systems house, Fortune 1300 executive, data processing director, government buyer, school purchaser or consultant); or if you write or market software, you can't afford to miss Softcon.

It all happens in one of America's most delightful cities, during the exciting season of Mardi Gras.

For more information or to make your reservation right away, call 800-841-7000. Or write Northeast Expositions, 822 Boylston Street, Chestnut Hill, MA 02167.

Softcon is produced by Northeast Expositions Inc., nationwide producers of the National Computer Shows, Applefest, CP/M 83 and PC 83, 822 Boylston Street, Chestnut Hill, Massachusetts 02167, 617-739-2000, 800-841-7200 (outside of Mass.). The National Computer Conference, Comdex and Softcon are trademarks of AFIPS, Interface Group and Northeast Expositions, respectively.

Managers on the Move

HENRY E. MORELLI has been appointed to the position of vice-president, management information systems (MIS), for Datapoint Corp. in San Antonio, Texas. In this position, he will provide a centralized focus for Datapoint's internal management information systems. He will be responsible for reorganizing all the decentralized MIS activities within the company, setting new direction for systems development and integrating that plan with operational information systems.

Prior to joining Datapoint, Morelli spent eight years with Racal-Milgo, Inc. in Miami, where he was director of the MIS group. Prior to that, he held various information systems management positions with IBM and Informatics, Inc.

A graduate of Pace University with BBA and MBA degrees, he has also completed additional courses in information management.

BILL ELWOOD has been appointed to the position of vice-president of information systems at T.G. & Y., located in Oklahoma City. In his new position, he will be responsible for the informa-

tion systems division. Elwood has the additional responsibilities of researching new technological advancements, developing strategic plans and interfacing with the systems steering committee, made up of T.G. & Y. senior management.

Before joining T.G. & Y., Elwood worked for Target Stores as director of management information systems for eight years and as a se-

nior financial analyst for three years. He was also a consultant with Touche Ross and Co. for two years. He also served as exchange officer with the U.S. Navy.

Elwood earned a bachelor of science degree in business administration and an MBA from the University of Minnesota.

CASEY L. PERRIMAN has been promoted to vice-presi-

dent in the Systems Planning & Architecture Department at Union Bank's Southern California Service Center.

She has been with the bank since 1979, and her most recent position was that of systems manager. Perriman holds a bachelor of arts degree in computer science from the State University of New York.

Managers on the Move

(Continued from Page 44)

MICHAEL L. LACH has joined Allergan Pharmaceuticals as director of management information systems in Irvine, Calif. In this capacity, Lach will be responsible for all data and word processing functions within the organization.

Before joining Allergan, he served in a variety of management positions at Carter Hawley Hale Stores,

where he was director of systems development as well as manager of technical support and computer operations for all divisions.

Prior to Carter Hawley Hale, Lach was district manager, systems software, for Pacific Northwest Bell Telephone Co.

Lach has a B.A. degree from St. Mary College in Winona, Minn., and a master's degree from the U.S. Interna-

tional University in San Diego.

WAYNE F. SMITH has been named manager of information systems and resources for Towlift, located in Cleveland. In his new position, he will be responsible for computer equipment and operations, systems and programming, credit area and collections, office equipment procurement in all stores and

special projects.

Prior to his promotion, he served at Huntington Bank (Union Commerce) as manager of systems research and planning. From 1978 to 1981, he was the assistant vice-president of information services for Euclid National Bank. From 1977 to 1978 he was a project manager for the Computer Services Co. Smith is a graduate of Baldwin-Wallace College.

SHIRLEY ANN STOUGH has joined Quantum Corp. as a communications manager. In her new position, she will be responsible for public relations, advertising, trade shows and promotions.

She comes to Quantum from the Strayton Corp., where she served as a California branch manager.

Prior to that, she was corporate communications manager for General Automation, Inc. in Anaheim, Calif. She also worked as regional sales manager for *Production Magazine* and in marketing communications for NCR Data Pathing Systems Divisions.

ULTRA

You've come to expect high levels of performance from your DEC™ VAX™ hardware. And you should expect no less from your data base software.

That's why Cincom introduced the ULTRA INTERACTIVE DATA BASE SYSTEM™—a next generation relational technology that combines high performance with practical, ease-of-use implementation.

New Generation Architecture

The secret behind ULTRA's interactive high performance is its unique architecture. An architecture built on a solid foundation of the very latest in relational subject data base technology. In-line control and security are achieved through the ULTRA In-Line Directory while relational implementation is achieved through the unique ULTRA Logical User View and the new Data Base Management facility. Combined, these components provide interactive synergism between users, programmers and the data they wish to access.

For multiple-machine applications that can range from scientific to high volume transaction oriented business systems, ULTRA provides VAX users the control and consistency needed to build high performance, low overhead, high quality systems that can be readily used by both programmers and by the burgeoning number of end-users. ULTRA also facilitates the latest in subject data base strategies for optimum data storage, retrieval and data manipulation.

Integrated Components

The integrated components which provide this unparalleled power include:

- **The ULTRA Logical User View.** Modern, relational technology to insulate users and application programs from data structures and navigation requirements.

- **The ULTRA In-Line Directory.** Centralized control during program execution. Integration. Security.
- **The ULTRA DBMS.** High performance. Powerful. Faultless non-stop processing. Supports normalized data structures.
- **The ULTRA Intelligent Query and Reporter.** Direct end-user access. Flexible and easy to use.
- **The ULTRA Data Manipulation Language.** So powerful even the most complex processing can be handled using four commands: GET, INSERT, UPDATE, DELETE.

The Ultimate In Interactive Data Base Software For The VAX Environment

Like no other data base system available today ULTRA enables you to achieve the full potential of your VAX system. As your company evolves, ULTRA keeps right in step. And ULTRA is completely compatible with TIS™, our next generation data base system for the IBM mainframe.

So now you can implement Cincom's "IBM-DEC Connection" to link your strategic and tactical applications. In fact, the compatibility is so close, applications built on your IBM can be modified to run on VAX, or vice-versa. An ULTRA/TIS combination is the perfect IBM-DEC Connection.

For an in-depth brochure on the ultimate in interactive data base software for the VAX environment, simply contact our Marketing Services Department, 2300 Montana Ave., Cincinnati, OH 45211, or call us direct.

The *Daily News* has appointed BRIAN F. CRYNES to the post of director of management information systems in New York City.

Crynes, a computer systems expert with broad technical and management experience, will be responsible for the operations of computer and communication systems that are used at *The Daily News*.

Before joining *The Daily News*, he was a senior manager in the management advisory services department in the New York office of Price Waterhouse & Co.

He graduated from the University of Scranton in 1968 and obtained a master's in business administration and finance from the same school in 1972.

MICHAEL J. BILOTTI has been named senior vice-president, systems and technical services, for Zayre Corp. in Framingham, Mass.

In his new position, he will be responsible for computer systems development, the telecommunications network and technical systems support.

He graduated from the University of Syracuse with a B.S. in electrical engineering; he has also done post-graduate work at Northeastern University.

The Right Stuff

The Michigan Supreme Court judgment affirming the difference between custom and canned software for sales tax purposes is an enlightened view that other states would do well to adopt.

At a time when the federal government is carefully rationing financial aid to the states, states are actively seeking new sources of revenue to replenish their treasuries, and the burgeoning software industry has become a likely target.

This is not to say that the explosive growth in sales of both custom and prewritten software should not become contributory factors in the states' annual budget balancing acts. But sales taxes seem clearly to be the wrong vehicle, at least where custom software is concerned.

The issue that was before the Michigan courts is similar to cases pending in courts elsewhere, namely, the tangibility of software. "Tangibility" implies substance, and sales taxes, as a general rule, apply to substantive things — clothing, machinery, books and food in some cases.

Few reasonable people will dispute the tangibility of game software and canned programs for small computers. These programs can be found in book outlets, department stores and other retail establishments and, from the outside, are indistinguishable from music tapes, records and so on. The user takes them home, inserts them into his machine, and they do what they're supposed to do without any modification from the user. Their value, intrinsic and otherwise, is contained on the tape or disk.

Indeed, only one state — Texas — exempts even game software from sales taxes. Most states agree on the tangibility and, therefore, taxability of all prewritten software.

It is the custom programs, written largely for mainframes and whose value usually extends far beyond the tapes on which they are written, that are in question. And it is the users of these programs that have initiated the suits contesting state laws taxing custom software, because it is the users who ultimately pay the 3% to 7% sales taxes.

One extreme in the custom software case is given by Ohio, which taxes everything from custom programs to routine maintenance to consultation to time-sharing services. Clearly, most of these items are services, even though the services rendered are made manifest at some point as magnetic impressions on a computer tape.

But is the service of a consultant or contract programmer working in a mainframe environment so different from that performed by a lawyer or accountant, whose services are not subject to sales taxes? Is a modified application program any different from a will in this regard?

The point is that Ohio, Massachusetts and over a dozen other states that tax custom software apply the tax to what is actually a service, to a good measure. In most states, this is clearly not the spirit of sales taxes.

In fairness, states that wish to tax custom programs should either tax similar professional services or apply a special tax to custom software whose value is, in great part, derived from intangibles. To cushion the blow to users and vendors, these same states might consider some creative use for software-derived taxes, such as earmarking the proceeds for aid to computer education.

LETTERS

Measures DP Knowledge

The editorial "Stop Dangling Carrots" [CW, Sept. 5], seems to have been written by someone with an embittered attitude toward the DP industry due to his own lack of merit badges, certificates or education.

I passed the Certificate in Data Processing (CDP) exam this year and wonder if the people who condemn or talk down the exam have actually taken it and if they have, if they passed it.

I hold two degrees, and my DP experience stems from being a computer operator, programmer and, at the present time, a systems analyst.

I did not take the CDP exam to "inflate a resume" or for a "gold star." I believe the exam measures one's basic DP knowledge and can point out areas in which a person might be weak.

Any company that would hire or promote a DP individual merely on the basis of having a CDP would be making a serious mistake. Hiring or promotions should never be based on one particular aspect of a person's credentials, but on a variety, such as experience, ability and education.

The idea behind the CDP and any test for that matter is not to "instill professionalism," but to test basic knowledge. Professionalism cannot be instilled, but is a prerequisite for taking the exam.

Those that pass the CDP exam have a certificate only; being a professional is another matter entirely.

Chris A. Wolfe
Systems Analyst

Cuyahoga Falls, Ohio

Reconsider Your Position

Ten years have passed, and *Computerworld* editorials continue the myopic narrow-mindedness characteristic of a prejudiced position.

Not that I object to *Computerworld* having an opinion, mind you, but rather that it is willing to exercise its considerable editorial power to foster a position apparently based on a stubborn, preconceived conclusion rather than on reality.

Computerworld speaks of reason in its editorial on DP certification "Stop Dangling Carrots" [CW, Sept. 5]. What reason does the editorial reveal?

What I see are simplifications, misconceptions and clear misinformation. One would expect simplifications from bigots and misconceptions from poor research and scant knowledge; but misinformation from a responsible publisher is unacceptable.

Computerworld clearly has the power of the media forum, and I suspect it feels responsible. My earlier comments ought to concern *Computerworld* and to prompt investigation of its position in a responsible manner. The ethics of responsible reporting in a free society demand no less.

Should *Computerworld* take this challenge seriously, it may come to a better understanding of what "professional" means and what the Institute for Certification of Computer Professionals (ICCP) represents than is displayed in the editorial.

I, as a past president of ICCP and a current member of the board of directors, can promise *Computerworld* the opportunity for frank discussions and review of the issues.

A good idea dies hard, even when oppressed by a hostile, powerful press. In 10 years, *Computerworld* has not killed it. Isn't it about time to ask why?

There's a great story here. Maybe *Computerworld* ought to be the one to tell it.

G. Gary Casper
Director

Sysorex Institute
Cupertino, Calif.

LECHT ON SCIENCE /Charles P. Lecht

A 100G-Flops Processor: The Sixth Generation

This is the second of a three-part series on supercomputer development in the U.S.

In the first part of this series concerning the National Security Agency/Los Alamos National Laboratory Conference (NSA/LANL) on the frontiers of supercomputing (Los Alamos, N.M., Aug. 15-19, 1983), I offered my impressions of the general conference environment: its sponsors, speakers, attendees and facilities [CW, Sept. 19]. I paid my compliments to the conference and its organizers, and those compliments were sincerely meant. I also observed, although I did not elaborate at the time, that there was much accomplished at this extraordinary convocation, and I alluded, not entirely in sport, to "Year One of the Federation," harking back to the governance of galaxies that was the tacit theme of the now legendary *Star Trek* television series.

But regular readers of this column will surely have noted that there were things I did not say — for example, that the only turbulence at the NSA/LANL conference was that caused by the ceaseless tossing of bouquets and blowing of kisses across the vast spaces of the J. Robert Oppenheimer Study Center by all the experts gathered there. That's because the give-and-take did involve a measurable degree of snarling and contentiousness, along with the exchange of reasoned dialogue and politeness.

The usual self-interested groups made their appearances, right on

'The conference served to reveal to some, and reconfirm to others, just how important our need is to create systems of devices of one billion floating point operations per second (giga-flops) capacities, that is, supercomputers, and how failure to do so would constitute the most grievous of errors. The kinds and magnitude of calculations required to pursue America's scientific research and development would simply be impossible without such systems.'

schedule. And what some individuals saw fit to remark about others, and vice versa, surely confounded cruelty with candor. In other words, it was a nonorchestrated meeting of real people.

Divergent Views

While the conference can certainly be described as having been united by a common interest — supercomputers — it was a bit startling to witness so many divergent views on key issues and even, on occasion, to hear them expressed with passion — regarding, for example, how many supercomputers we need, when, of what power and by whom they should be paid for.

Nonetheless, the very presence of so many serious and successful scientists at the conference surely betrayed a greater commonality of goals than they might have cared publicly to own up to — idealism and patriotism often make scientists blush. Consider all this in light of

the fact that it was the first meeting of its kind, and you will have to concede that it is a wonder anything of value could have come out of it.

So what, then, did? For one thing, the conference served to reveal to some, and reconfirm to others, just how important our need is to create systems of devices of one billion floating point operations per second (giga-flops) capacities, that is, supercomputers, and how failure to do so would constitute the most grievous of errors. The kinds and magnitude of calculations required to pursue America's scientific research and development would simply be impossible without such systems.

Internationally, our trade objectives would be seriously undermined; our leadership in nuclear, space, genetic, economic and other critical fields cannot be maintained by scientists using less powerful systems than those available to their colleagues abroad. And it does not require limitless imagination to see

that the existence of a massive, supercomputational leviathan in even the smallest country could rapidly turn that country into a significant economic power, with little more to sell than the ideational derivations of that power.

A Few Vials of Nasty Germs

As if these were not in themselves compelling enough reasons, I call your attention to the fact that the size of a nation's territory or population is becoming increasingly irrelevant insofar as its status as a world military power is concerned. A few atomic bombs with matching suitcases, a few vials of nasty germs and the perseverance to distribute their contents in an attention-arresting way are all that modern reality requires. This represents a dramatic shift away from the tenets of conventional wisdom we have heretofore always applied in defining/perceiving strategic power. It is my opinion that a few gigaflop systems in foreign laboratories will dramatically alter our perceptions of what constitutes military might. For modern weaponry, surveillance techniques and the like depend upon supercomputers for their development, in the first place, and, ultimately, for their use as well (as in the case of applied laser technologies, for example).

The meeting also exposed great weaknesses in America's supercomputer efforts. At the head of the list was a sorry lack of imagination regarding possible applications of su-

(Continued on Page 48)

HUMAN CONNECTION /Jack Stone

This Country Needs a Good Portable Micro

There's no problem with stuffing a portable computer into the trunk of your car and whisking it across the Texas border into the soft-textured lands of sunny Mexico, assuming that the gendarmes will tolerate its passage. But dragging it into John F. Kennedy Airport and cramming it under a seat on a 747 jet is an altogether different matter.

There is no way I would make it past the security check what with the bulk and bulk of my machine, even without the printer.

Yet I was determined to haul along some sort of word processing capability on my forthcoming trip to the British Isles. I suppose it's because I'm hooked on the facility — a WP junkie, as it were — believing that keyboarding somehow gives life to my otherwise listless expressions. And I find myself terribly given to speech, perhaps as a sort of psychological carthasis.

My friends have remarked as to how wonderful it is that I can give vent to my verbosity through the medium of a machine rather than inflicting my rushing words on them.

So I began trudging around in the footsteps of those many thousands of weary buyers who are trying to figure out what make and model of por-

'I was determined to haul along some sort of word processing capability on my forthcoming trip to the British Isles. I suppose it's because I'm hooked on the facility — a WP junkie, as it were — believing that keyboarding somehow gives life to my otherwise listless expressions. And I find myself terribly given to speech, perhaps as a sort of psychological carthasis.'

table machine to buy.

In store after store, I presented my needs: "Portability is paramount. I should be able to stow it aboard a commercial airliner. It should be no more than 5 pounds, but I'll settle for 10. Word processing software should be very simple. I want a tube that I can see without a telescope. I can do without a print capability on the road, as long as the machine will drive the printer from my current system when I get back home."

I looked at a computer from Osborne Computer Corp. (at the time, the sales personnel were not pushing the machine too hard, for reasons that have recently become painfully clear), a system from Kaypro, Inc. and Otrona Corp.'s Attache, but they were all too heavy.

I turned to the battery-operated

"laps" and found that only Radio Shack's TRS-100 had a word processing feature and that was a built-in read-only memory (ROM) package.

I quickly imagined myself pounding away at its keyboard and unraveling some mystery of computer life, while driving along a mountainous road somewhere in the Scottish Highlands.

At first blush, the TRS-100 looked awfully good, what with its weighing in at four pounds. Also, it provides a cute little file manager, again ROM-based, with a simple search function.

The machine sports a built-in modem, but I have no practical use for this feature, other than as an item for discussion at a cocktail party. And, sure enough, there was an RS-232 serial interface for my printer peeking

out of its backside.

I trundled the printer over to the local Radio Shack, all 36 pounds of it, just to make doubly certain that there was no connection problem.

I'll Never Know

Well, I'll never know if there is one because the salesman didn't have the slightest idea about what controls to use to drive the printer. As he struggled to find them, I looked over the operating manual and discovered, much to my dismay, that Tandy apparently released the machine, or at least the word processing function, only partially completed.

It's easy enough to enter text, and the editing features are nifty, but there are no print format capabilities other than line width selection and an option to print either a screen or the entire file. Reluctantly, I was forced to abandon the notion of a lap.

The solution to my needs? For the time being, I'm going peripheral instead of mainframe, and analog at that. I'm taking a two-pound audio tape recorder, a remote microphone and a mess of cassettes that I'll transcribe and pump into my machine when I return.

The Sixth Generation

(Continued from Page 47)

percomputer technology. It was this dearth of imagination that inspired some of the ludicrously low estimates of how many supercomputers could practically be employed in this country (or elsewhere) that we heard. Not surprisingly, this led to a pitch for government subsidies for supercomputer development.

Although I agree that there is legitimate reason to support such subsidies, I could not agree with the estimates made at the conference of how many supercomputers might be needed; and I was genuinely flabbergasted by the paucity and unoriginality of the ideas proposed for applying the powers of these machines. You would think there was no commercial marketplace at all and that beyond doing incredibly fast arithmetic, the systems were utterly useless.

True, architectures other than those found in our current supercomputers are needed if their application to the commercial sector is to be widened; but these are already known. The beautiful promise of our emerging integrated services digital network technology to distribute the powers engendered by computer systems everywhere, like telephone service, is predicated upon the availability of ever faster and larger capacity systems than those currently in existence.

Need I do more than cite the fantastic commercial rewards implicit in

'Commercial applications of supercomputer systems rival those found for fuel... We learned that we don't need the goad of recent Japanese successes in electronics any more than we need the technological triumphs of Germany or France or any other nation to motivate us to continue our supercomputer efforts... Our requirement for supercomputers is a far larger issue than our perceived need to beat the pants off any single foreign country. Our competition is with all of them.'

holographic projection to make my case? Or the widespread availability of artificial intelligence (while we're waiting for the real stuff to mature)?

The possible commercial applications of supercomputer systems rival those found for fuel (of all sorts), and their impact on our future lives will be no less. And we learned that we don't need the goad of recent Japanese successes in electronics any more than we need the technological triumphs of Germany or France or any other nation to motivate us to continue our supercomputer efforts. The requirement — our requirement — for supercomputers is a far larger issue than our perceived need to beat the pants off any single foreign

country. Our competition is with all of them.

I left Los Alamos with the uneasy feeling that our identification of Japan as the country to beat in the world computer marketplace is unhealthy. For if we really believe that they learned everything they know from us and are now beating us at our own game, then it must be terribly demoralizing to those American scientists who were the classmates of today's successful Japanese scientific leadership to feel that they (the Americans) have been adjudged de facto retardates in its playing.

I, for one, do not subscribe to this insulting opinion. We must protect our scientific community from such unwarranted, and surely unintended, slurs. That Japan accounts for less than 3% of the world computer systems marketplace, whereas American manufacturers effectively dominate it, more nearly embodies the truth of the issue.

We've beaten the pants off the Japanese computer industry — and it was our scientists who did it. That is not to say that we cannot improve, or that others are not improving, making it safe for us to rest on our laurels. To avoid the dangers inherent in such resting, someone must enunciate a national goal for American computer science achievement, like a 100G-Flops processor. Call it the sixth generation, and let's get on with it.

Lecht is chairman of Lecht Sciences, Inc., a New York-based think tank specializing in computer and communications technologies.

Seminar: Getting more control over the manufacturing process.

Seminars on Cullinet's Manufacturing System, and their entire line of software products, will be held in the following cities during the coming weeks.

Baltimore, MD	Oct. 12
Denver, CO	Oct. 11
Detroit, MI	Nov. 3
Edmonton, ALTA	Oct. 13
Harrisburg, PA	Nov. 22
Meadowlands, NJ	Nov. 30
Phoenix, AZ	Oct. 12
Pittsburgh, PA	Nov. 1
Raleigh, NC	Oct. 13
Regina, SASK	Nov. 15
San Jose, CA	Oct. 18
Tampa, FL	Nov. 29
Tulsa, OK	Oct. 11
Valley Forge, PA	Dec. 1
Vancouver, BC	Nov. 30
Washington, DC	Nov. 22

LETTERS

Training Pays Off

Larry Long's Turnaround Time column [CW, Sept. 5] really hit home.

I have worked in two DP shops over nearly three years and have received no formal training in either place. What I did learn from one DP position didn't transfer well to the next job.

Experience in one organization on one system can be totally unlike the experience in another organization on a different system. Thus, whether one's talking about entry-level or experienced DPs, it is absolutely essential that DP shops give employees adequate training. This doesn't mean just tossing them manuals. It means hands-on training, mixed with in-house classes, professional seminars and membership of employees in professional organizations.

The uncertainty of trying to work on something and not knowing what you're doing is frustrating, not to mention inefficient.

To expect ready-trained employees either from other DP shops or colleges is totally unrealistic. To be willing to expend nothing on training for fear the employee will seek greener pastures is a self-fulfilling prophesy.

How to control a world you can't always predict.

Cullinet's integrated manufacturing software

Cullinet has a software system that provides manufacturers with the one thing they could use more of: control.

A Cullinet Manufacturing Software System consists of eight applications from Master Production Scheduling to Shop Floor Control. They can be purchased separately or as a completely integrated system.

As a net-change, closed-loop MRP II system, Cullinet's Manufacturing Software provides manufacturing personnel with an accurate reflection of—and easy access to—constantly changing information about the manufacturing cycle. At any point in the cycle.

With this kind of timely information, variables that might influence inventory, resources, personnel, production, distribution, indeed, the very profitability of a manufacturing concern can be accounted for. And, once accounted for, controlled.

A very flexible system, Cullinet's Manufacturing Software can bring high-level control to any manufacturing environment however unique or personal your individual style and approach. It can provide single or multi-plant controls. Control for process manufacturing, make-to-order, make-to-stock, or repetitive manufacturing. In other words, it is equally capable in any manufacturing environment.

So even if your world changes in unpredictable ways, we can give you control over it. Cullinet's Manufacturing Software.

For more information or to attend a seminar on Cullinet's Manufacturing Software, see the page adjacent.

The only microcomputer show designed exclusively for business and professional users.

**NO GAMES. NO TOYS. ALL BUSINESS.
GET THE INFORMATION YOU NEED AT
EMCE LONG BEACH.**

To register for one of these free computers, enter your name at the InfoWorld booth.

Wednesday, Thursday, and Friday October 5-7 Long Beach Convention Center

It premiered in New York this June, and now it's the only major microcomputer show in Southern California this fall. It's EMCE. And it's designed exclusively for you.

See the Latest Microcomputer Hardware, Software and Services.

A complete selection of microcomputer systems, business software, packages, printers, monitors and other peripheral equipment as well as computer accessories and related equipment and services will be on display at EMCE, giving you a unique opportunity to gather the information you need quickly and efficiently.

Get Hands-On Demonstrations

of the latest equipment at exhibitors' booths. EMCE is not the typical, crowded computer show loaded with kids and hobbyists, so you'll have time for hands-on demonstrations of the products that interest you. And you'll have a chance to get your questions answered.

HOW TO GET TO EMCE LONG BEACH

Long Beach Convention Center
300 East Ocean Blvd. • Long Beach, CA 90802
10 AM to 6 PM

Wed., Thurs., & Fri. - October 5, 6, 7

EMCE Long Beach is sponsored by - CW Communications/Inc., publishers of *Computersworld*, *InfoWorld*, *ISO WORLD*, *PC WORLD* and the largest most respected publisher of computer-related newspapers and magazines in the world.

Attend a conference session of your choice — FREE.

When you register for EMCE exhibits with the coupon below, you'll get a free ticket for any one of our more than 20 conference sessions on Thursday or Friday. (To register for the complete conference program, or get more information, just call 1-800-225-4698.)

Win one of three microcomputers from InfoWorld.

Three Morrow Micro Decision (MD3) computers will be given away at the InfoWorld booth during EMCE. The Morrow is the complete desktop system for small businessmen and professionals. And it is more than just a great hardware value. It also includes great software: WordStar word processing, Correct-It spelling checker, and LogiCalc, the spreadsheet that helps you forecast the future.

SAVE \$5.00

on \$10.00 EMCE Exhibits admission

You can use this coupon to save \$5.00 on admission to the EMCE exhibition. Your total fee is only \$5.00. This coupon is also good for your FREE conference session.

CW

EMCE
Executive Microcomputer
Conference & Exposition

Get a free, no-lines tour of the Spruce Goose.

The largest plane ever built has been reserved for special showing to EMCE attendees on Wednesday and Thursday evenings from 6 to 8 PM. No lines. No charge. Just pick up a free ticket at any EMCE exhibitor booth.

OS CICS Users Get 'Umax,' Utilization Monitor

MCLEAN, Va. — Johnson Systems, Inc. has released Version 3.1 of the CICS Utilization Monitor and Chargeback System (Umax) for OS CICS users.

The latest version of Umax, a data collection and reporting tool, offers full support for OS CICS/VS Release 1.6 and 1.5, independent real CPU time and paging statistics data collection and security enhancements to permit users to screen Umax transactions and prevent unauthorized execution, Johnson said.

In addition, the system provides virtual storage constraint relief through individual file and program-level collection techniques, as well as a file-nesting level indicator.

The cost of the OS Umax system is \$6,000 from Johnson Systems at 8300 Greensboro Drive, McLean, Va. 22102.

Production Control Involves Complex Weave

By Layne Bradley
Special to CW

One area within the data center that is receiving much attention with regard to productivity issues is automated scheduling and production control. The production control environment involves an extremely complex group of interrelated tasks and responsibilities such as data entry, job preparation, work load scheduling,abend recovery and resolution and reports production and distribution.

In production control raw input is processed through several workstations into a deliverable product for the customer. Thus there are many labor-intensive, repetitive activities involved. The productivity issues address two aspects:

- How can the activities be automated to increase work flow through the system?
- How can the activities be combined

or eliminated in such a way as to reduce the number of people required to run the system?

In a production environment there are several work areas through which work must flow. Thus, one function which production control systems must perform is to track work through these various workstations. Mere tracking is not sufficient, however. The system must provide information on a real-time basis.

Each workstation has different requirements. For example, in a data entry work area the primary concern is receipt and logging of input data, preparation of the data and transmission of data in some manner. A production control system should be able to provide rapid information, such as the arrival time of data, the time data was prepared for transmission and the volume of data that has been received.

In addition, an automated system should provide some preemptive control. If, for example, input data is scheduled to be submitted by the user at a certain time and isn't, the production control system should automatically and immediately alert appropriate personnel.

Activities in the job-setup workstation typically involve making temporary changes to job control language, rearranging job or step sequences, inserting necessary parameter information or adding instructive comments.

The automated production control system should "remember" all the tasks required for a particular job. It should allow requirements to be defined ahead of time and then automatically inform the opera-

Application Development Tools Serve Gcos-Based Large Systems

PHOENIX — Honeywell, Inc. has announced five application development facilities for its Gcos-based large-scale systems. These products are designed to enhance programmer productivity by providing new language processors, forms options, program generators and testing models, the company said.

These five products are the first to be acquired by Honeywell's program of externally sourced products for bringing third-party software to a Honeywell large-scale environment. They include the Transaction Screen Management (TSM) system, Transaction Application Test System (Tats), System-80 automatic program generator, the Softool set of programming tools and the C programming language. All five facilities operate on Honeywell's DPS 88, DPS 8 or DPS 66 large computers under Gcos Release 4JS3 or Gcos 8 Releases 2000 and 2300.

The TSM system is designed to aid terminal-independent program design of on-line applications programs in the DM-IV transaction processing environment. According to Honeywell, TSM relieves the programmer from coding network-depen-

dent information such as forms control data for terminals and security control mechanisms.

TSM comprises a set of DM-IV transaction processing programs, a supporting IDS/II data base and a set of Cobol-74 batch utility programs. The system requires at least one Honeywell VIP 7800 terminal for operation and also will support the VIP 7700 and terminal systems with VIP emulation capabilities.

TSM is available for a one-time license

'Calc/1' Spreadsheet Upgraded

SAN FRANCISCO — H & A Computer Products, Inc. has announced an enhanced version of the IBM Calc/1 electronic spreadsheet originally introduced in August of 1982.

The Calc/1 is modeled on the more popular spreadsheet programs available for personal computers. It is designed for IBM EDX Series/1 processors with 4978/79 or 3101 terminals.

The enhanced Calc/1 now provides a

"virtual" spreadsheet allowing a 254-row by 63-col work sheet to be processed within Calc/1's minimum 32K-byte memory requirement. The enhanced version of the Calc/1 is priced at \$500.

The vendor specializes in software products for EDX Series/1 development, performance measurement and data communications. H & A Computer Products is located at Suite 204, 30 Hoteling Place, San Francisco, Calif. 94111.

Three Reasons System/Manager Stands Alone

No other DOS/VS(E) resource management system comes close to Corodale's System/Manager for overall ease of use and hardware efficiency. It's the complete resource manager. Because of three perfectly integrated components.

Space/Manager

Improves disk space and disk file control. Increases capacity by up to 50%.

Tape/Manager

Controls tape allocation and usage. Minimizes clerical time, ensures security and integrity.

JCL/Manager

Reduces job stream set up and maintenance. Streamlines operational efficiency and throughput.

In just 15 minutes, System/Manager can be up and running, paying for itself. And its modularity means you won't outgrow it, it won't outgrow you. We'll even let you prove all this in your own environment for a full 27 days.

Write or call for our Cost Analysis/Justification Worksheet and detailed information.

**"If the auto industry had done
what the computer industry
has done in the last 30 years, a
Rolls-Royce would cost \$2.50
and get 2,000,000
miles per gallon."**

Computers aren't just an industry, they're a revolution in the way mankind operates. And no one covers this revolution better than we do!

We are CW Communications/Inc. and despite our youth (only 15 years) we're the world's largest publisher of newspapers and magazines for computer people all over the world.

Most of our publications are weekly newspapers, because so many things happen so rapidly in the computer business (as the headline quote from a prominent industry executive makes so clear). In

only thirty years the industry has gone from the development of the giant Eniac system, through the tube-powered, water-cooled Univac I (the world's first business computer), to the incredibly cheap, battery-powered microprocessor.

But as unbelievable as the last 30 years have been, the next 30 will probably be even more incredible. In the next two years alone, the installed power of

general purpose computer systems will grow almost as much as it did in the previous 16 years. And the supercomputers of the 90's will transfer data at a rate several hundred times faster than even today's speedy computers! It's hard to remember this is real science, not fiction.

This extraordinary increase in efficiency has led to a rapid expansion in computer use, as human ingenuity finds more and more applications for these powerful tools. So the market for computer products and services has turned out to be more elastic than most observers had thought.

Worldwide expenditures are currently at \$90 Billion, and growing by 20% a year.

A constant flow of new products; rapid changes in technology; more and more new applications; and large and growing expenditures. It's an industry with a strong need for current, complete and accurate information. Which is where we come in.

Our oldest publication is **COMPUTERWORLD**, a weekly newspaper with a growing all-paid circulation in excess of 120,000 (quite an increase from our modest 7,500 in 1967).

COMPUTERWORLD serves America's computer users with the consumer-oriented, objective information they need. And it has become America's top business/professional publication, measured by advertising revenue.

ISO WORLD is our semi-monthly publication for retailers, dealers, distributors and other independent sales organizations (ISOs) in the resellers marketplace. This is a relatively new marketplace which has grown up around the minicomputer and microcomputer, and which shows every sign of very rapid growth for at least the next decade.

The latest phenomenon of the computer industry is personal and desk-top computers and we're covering it with our newest publication, **INFOWORLD** and **PC WORLD**. **INFOWORLD** is a weekly newspaper for all micro users and it features complete software and hardware reviews, while **PC WORLD** is a monthly magazine devoted to users of the IBM PC and compatibles.

The United States alone accounts for nearly half of the worldwide computer market, but billions of dollars are spent by foreign computer people for American-made computers and computer products. And our publications penetrate those marketplaces, too.

We are publishers of newspapers and magazines in the following markets: Australasia, West Germany, United Kingdom, The People's Republic of China, Japan, Brazil, Mexico, France, Spain and Denmark.

And we provide U.S. advertising representation and editorial services to publications in the following countries: Italy, Greece, The Netherlands, Sweden, Argentina, Chile, Southeast Asia and Kuwait.

Our International Marketing Services Department can give you one-stop advertising service for any or all of these publications — including translation and production services. We'll even bill you in U.S. dollars, so it's easy as advertising in U.S. publications.

Computing is an exciting industry, with a unique need for information. And the publications we produce provide that information to nearly two million computer-involved people around the world. They are excellent vehicles for reaching these people with your advertising message, and we'd be happy to give you more information on any of them. Just call or write, Don Fagan, Vice President, Sales.

'Omnicalc' Release Provides Spreadsheet Capabilities

IRVINE, Calif. — Tower Systems, Inc. has announced Release 4 of Omnicalc, which provides users with spreadsheet capabilities while utilizing the power of existing mainframe terminals.

Release 4 features cell formula entry, support for IBM's VM/CMS and TSO, variable cell widths, on-

line print capabilities, support for color and extended attributes, three-dimensional screen display and bar graphs.

The product was designed for IBM's CICS environment. Monthly rental prices begin at \$295 from Suite 365, 19782 MacArthur Blvd., Irvine, Calif. 92715.

Designed for Flexibility

Financial Control System Debuts

NEW YORK — Data Design Associates, Inc., a supplier of financial applications software for medium-scale to large computers, has announced the development of a general ledger financial control system that allows corporate end users greater flexibility in tailoring financial data to their needs than any existing software.

According to a vendor spokesman, the new system incorporates English-language user commands, a personal computer interface, on-line data entry and inquiry and other features aimed at simplifying data base access.

The features are aimed at putting the power of the system in end users' hands.

Installations of the general ledger financial control

system will begin the first quarter of 1984 with a base price ranging from \$60,000 to \$86,000.

More information is available from the vendor at Suite 310, 1250 Oakmead Pkwy., Sunnyvale, Calif. 94086.

Multitask Upgrades 'Libxref'

WEST HARTFORD, Conn. — Multitask, Inc. has announced an enhancement designed to enable its Libxref software tool to load and maintain data dictionaries on IBM mainframes.

The User Report Generation Package (URGP) assists users to populate and keep current data dictionaries, the vendor said. Libxref, a cross-reference and documentation productivity tool, captures all cross-reference data for the dictionary, which can be used to manipulate and scrub data.

The URGP is supplied with reusable source code routines that can be modified to load data into any data dictionary system, Multitask said. It is designed for use in all major IBM mainframe operating systems.

Libxref prices start from \$7,000 from Multitask, 1007 Farmington Ave., West Hartford, Conn. 06107.

Payroll Tool Unveiled For Wang VS

WHEATON, Ill. — An online payroll and personnel package for use on Wang Laboratories, Inc. VS series minicomputers has been announced by Generated Systems, Inc.

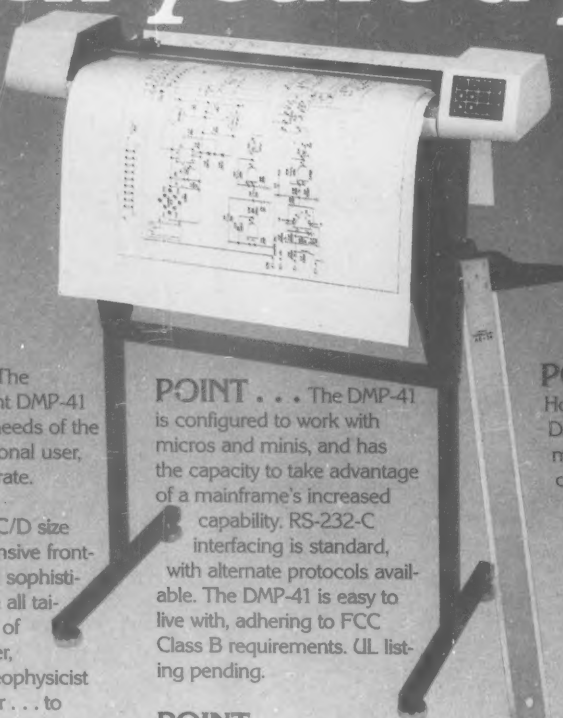

The Payroll/Personnel System is based on a system that was originally designed for use on IBM mainframes, a company spokesman said.

It reportedly utilizes an integrated file structure for all employee data and features unlimited tracking of earnings, taxes and deductions for each employee. The system can handle multiple companies, payrolls and frequencies, the vendor said.

Written in Ansi 74 Cobol, the system may be used on Wang systems starting with the VS25. Source code is provided.

Software is priced from \$15,000, and complete systems with hardware start at \$45,000 from Generated Systems, 209 N. Hale St., Wheaton, Ill. 60187.

It's easy to make points when you're a pro.

POINT . . . The Houston Instrument DMP-41 plotter meets the needs of the serious or professional user, yet it's easy to operate.

POINT . . . C/D size format, comprehensive front-panel controls and sophisticated firmware are all tailored to the needs of the surveyor, drafter, oceanographer, geophysicist and land developer . . . to name but a few. You can generate superior architectural elevations, contour maps, circuit-board layouts and assembly drawings quickly and accurately on bond, vellum or synthetic media.

POINT . . . The DMP-41 is configured to work with micros and minis, and has the capacity to take advantage of a mainframe's increased capability. RS-232-C interfacing is standard, with alternate protocols available. The DMP-41 is easy to live with, adhering to FCC Class B requirements. UL listing pending.

POINT . . . Minutely defined step size and high-resolution logic—combined with robust drives and optimized pen ballistics enable you to create plots of high precision and surpassing quality.

POINT . . . The Houston Instrument DMP-41 is one of your most cost effective considerations.*

WHAT TO WEAR TO WORK IF YOU BUY THE WRONG DBMS INSTEAD OF OUR MODEL 204.

Picking the best, most productive DBMS for an OS, DOS or CMS environment requires the use of all your faculties. Because many DBMSs never live up to their promises. And sooner or later those deficiencies are bound to catch up with you. Leaving you looking for something to hide behind.

Computer Corporation of America doesn't have to put on an act to convince you. Our MODEL 204 DBMS is the only commercial DBMS ever designed from scratch for online systems. Every other DBMS was converted from batch. And that means new applications come up faster with MODEL 204. In fact, 5 to 50 times faster. And your applications and databases are much easier to maintain.

What about performance? If you end up with a DBMS that can barely carry a few million records and a dozen or so users, you won't be able to mask the fact forever. Especially if someone finds out that MODEL 204 can handle up to 513 billion records and 999 concurrent updates.

Now the advantages of MODEL 204 are available for the DOS/VS(E) and native CMS environments. Without sacrificing either performance or productivity.

In the DOS world, MODEL 204 is the only DBMS with a direct teleprocessing interface. Which saves the resources and

productivity costs of a terminal monitor.

Our native CMS implementation outperforms other DBMSs because it utilizes its own I/O routines without modification to either VM or CMS.

Finally, two other things that no other DBMS can say. MODEL 204 received the highest overall rating in a recent *Datapro* survey: 3.5.¹ And it's the fastest growing system for IBM mainframes from an independent vendor.²

Now faced with these facts wouldn't you look silly buying anything but MODEL 204 DBMS?

MORE ON MODEL 204 DBMS.

Five Application Tools Fit Gcos-Based Systems

(Continued from Page 51)

fee of \$24,000 or \$980/mo for a minimum of one year.

The Tats package is a time-sharing software tool for interactively writing, compiling, testing and debugging application procedures outside the transaction processing environment. It utilizes a program skeleton generator and forms mode terminal to build and debug a single transaction. Once completed, routines are compiled through Cobol-interactive commands, a Honeywell spokesman said.

The one-time license fee for Tats is \$10,800. It can also be licensed monthly for \$580 for a minimum of one year. Tats is available immediately.

System-80 is a set of two software tools designed to facilitate routine Cobol program development tasks such as coding, maintenance and documentation. The Cobol program generator produces menu-driven data entry and file maintenance programs that interact with the user while executing, according to Honeywell.

The System-80 products are scheduled for availability in October. The Cobol program generator costs \$18,400 for one-time licensing or \$780/mo, while the report generator is \$9,900 or \$430/mo.

Honeywell's Softool products, which the company said can provide facilities to support software life cycles, increase programmer productiv-

ity, facilitate software maintenance and improve management visibility and control, are comprised of two products: a Cobol programming environment and a change and configuration control (CCC) package.

The Softool program set is offered in three different packages. Cobol programming environment will be available in October for a one-time charge of \$33,500 or \$1,400/mo. CCC is available now for \$30,000 or \$1,500/mo. Both Softool components can be acquired for \$60,000 or \$2,500/mo for a minimum of 12 months.

C is a general-purpose programming language that deals with characters, numbers and addresses designed for writing real-time

numerical, text processing and data base programs.

The one-time license fee for C, available immediately, is \$8,000. It can also be licensed for \$340/mo.

Information about all five programming tools is available from Honeywell through P.O. Box 8000/T-60, Phoenix, Ariz. 85066.

Scheduling, Product Control Interrelated

(Continued from Page 51)

tor of the need to accomplish the required tasks. It should notify appropriate personnel of the necessary requirements at the scheduled time and date. It should provide readily accessible documentation or instructions for personnel unfamiliar with the tasks and provide notification to the operator whether the changes are successful or unsuccessful.

The CPU is certainly a workstation in the production work flow. Many hardware and software tools are available to help improve its performance. Since the control of job processing is handled well by the CPU, the production control system should ensure that work is submitted in an orderly, scheduled manner to ensure timely delivery or output.

Work should be scheduled taking into consideration resources allocated for production processing, business priorities, due-out times, predecessor/successor relationships, data availability, date and time. The system should allow the routine work to be easily predefined and automatically submitted with little or no operator intervention.

Another important area isabend handling and recovery from system failure. Since time is usually critical in production work, the system should allow rapid correction and resubmission of individual jobs as well as recovery and backup for the entire system.

To be completely effective, the production control system must not only handle the majority of ongoing work automatically, it must also provide flexible capabilities for nonroutine tasks. It must offer complete, readily accessible information concerning the overall status of work flowing through the system and rapid notification of problem areas.

Control and tracking capabilities should also be available for the output distribution work areas. The system should be able to track individual reports from the time they are created through the various report processing activities to the final distribution.

Other information should include number of copies of a report, number of reports created and distribution information.

Reporting is the final function to be automated. The production control system should provide a wide range of technical reporting capabilities for performance tuning as well as management reporting for decision support.

Bradley is a marketing manager at University Computing Co. in Dallas.

Your micros need never stand alone again.

One of the liveliest topics among MIS managers is how to effectively transfer files between all those corporate micro-computers and an IBM mainframe.

Today, one solution stands out: OBS FTP.

FTP is a general purpose, utility program that provides 2-way file transfer between micros and IBM mainframe computers.

FTP was originally developed by UCLA and first introduced in mid-1982. It represents the state of the art in asynchronous file transfer.

The product comes in two parts. Host FTP runs under TSO or VM/CMS at the mainframe, while Micro FTP runs on the IBM PC (PC-DOS), Apple II, or II+ (DOS or CP/M) and 8080 and Z80 processors running CP/M.

Full data transparency

Unlike other file transfer alternatives, OBS FTP can transfer either text or binary files. This allows you to upload and download object programs or other non-text files. FTP uses a layered protocol featuring the exchange of

1K/byte packets to speed transmission.

Guaranteed reliability

Other micro communication packages may allow you to dial a host-based editor to transfer text files. But they only transfer one line at a time. And they can't prevent data loss or recover from transfer errors.

FTP offers a 16-bit Cyclic Redundancy Check (CRC) that is calculated by the sending program and recalculated by the receiving program. If the calculations don't match, FTP automatically tries again.

Highly flexible, easy to use

Programmers can download a source program to their micro at home, complete the program, and upload it for compiling and testing.

And think of the redundant diskettes you save. Archival data, backed-up files and programs can all be stored at the mainframe until they're needed by the PC user.

Micro FTP includes a terminal emulator so your micro can sign on

to VM/CMS or TSO.

To upload or download a file, the user simply provides the file names and issues a single command. FTP will operate at line speeds that are limited only by your communications hardware.

OBS Software has been a vendor of IBM systems software solutions since 1977. We understand mainframe organizations and speak your language. You can count on us for solid support when you need it.

OBS FTP There's nothing else like it. To build the most effective mainframe/micro network possible, contact us today.

Informatics Updates Mark V For IBM CICS Environments

WOODLAND HILLS, Calif. — Informatics General Corp. has introduced Release 4.1 of its on-line application generation package for users of IBM mainframes. The firm also announced that its Mark V package can be used in IBM CICS environments.

The addition of CICS compatibility to the basic Mark V package for IBM IMS/Data Communications (DC) environments provides teleprocessing portability for design, implementation, documentation and maintenance of on-line systems with performance-critical environments, the vendor said.

A major enhancement included in both the IMS and CICS versions of Release 4.1 is output of a design manual on request with every generated application.

This document reportedly includes overall summaries on screen-to-screen flow, data base usage, a

field reference index and summaries for each individual screen.

Other enhancements to Release 4.1 include: support for the PL/I programming language in an IMS/DC environment and the ability to install the Mark V package on IBM 3380 disk drives, the vendor said.

Release 4.1 is offered free to current Mark V users. For new users the Mark V package costs approximately \$100,000. The CICS versions of Mark V cost \$36,000 for an OS environment and \$24,000 for a DOS environment.

Informatics General is located at 21031 Ventura Blvd., Woodland Hills, Calif. 91364.

Monitor, Service Announced For IBM VM

RIDGEFIELD, Conn. — Adesse Corp. has announced the VM On-line Performance Monitor (Vmon) for IBM VM operating environments.

The firm is also offering a service designed to identify performance problems at virtual machine installations.

The Vmon package is a general-purpose tool for use in performance problem determination activities. The package can reportedly produce output for full-screen or line-mode terminals that is tailored to a specific analysis situation. Vmon can be used for analysis of virtual machine performance problems, as well as for performing I/O subsystem studies.

Vmon offers display formats that can be tailored to provide a variety of information in a usable form. In addition, the package can make use of the highlighting and color capabilities of IBM 3270 series CRT terminals, and displayed output can be captured in spool files for later examination.

The program operates interactively and allows ad hoc performance problem analysis. This allows virtual machines to be grouped for aggregate analysis or for exclusion from a display, the vendor said.

The Vmon package can be leased on a per-CPU basis for \$310/mo and purchased for \$5,500. Maintenance is included in the monthly charge, while customers who purchase Vmon must pay a \$60/mo charge for maintenance, the vendor said.

The Vmap analysis service includes a one-time analysis of a computer system running VM/370 or VM/SP either with guest operating systems, CMS or both.

The study includes an annotated copy of the analytic reports, showing likely bottlenecks, performance hitches, high loads or overloads.

The analysis service costs \$875 from Adesse, P.O. Box 515, Ridgefield, Conn. 06877.

That's Why We Fully Guarantee it!

Only One Human Resource Management System is good enough to be fully guaranteed. Genesys'. Our own people developed all of our software and systems. Our own people will also install our system, compiling and testing all our programs for you. Then our people will stand behind their work with a no-strings, money-back guarantee.

Genesys is simply unbeatable. Most Human Resource Systems contain the raw data you need for management reports, government compliance and to let you know "Is she promotable?". But you have to do a lot of work preparing data to get the information you want because they've added third party software.

Not so with Genesys. All our software is completely integrated and menu-driven. No matter what you need to know about Payroll, Personnel or Cafeteria Benefits, it's easy to get precisely the information in exactly the format you want. Just one keystroke gives you selective search, decision support, PC integration and color graphics. Real-time, from any office, anywhere in the country. With by far the tightest, most flexible security available.

We're so confident you'll be successful with Genesys we'll give an unconditional guarantee. How can you beat that? If you'd like more information on the Genesys HRMS or would like to attend an Executive Seminar near you, call Norman Bushee at (617) 685-5400.

SYSD Maintenance System for CICS Enhanced

BOISE, Idaho — H & W Computer Systems, Inc. has announced Release 3.3 of SYSD, its source program maintenance system for CICS.

According to the vendor,

the new release includes the following:

- A flexible partitioned data set editor features commands to copy, move, insert, replicate, add, delete and change individual or groups

of lines.

- A user-friendly spool display system allows viewing of the entire job or access to specific reports. Special commands include search for character string, display of

condition codes, end of reports and browse forward and backward.

- A spool printing system provides an economical means of distributing job entry system reports to remote locations with the high cost of remote job entry terminals.

- A direct access storage device management system allows users to scratch, rename, catalog and uncatalog data sets or to create generation data groups.

- Complete security exists at the function, subfunction, command and report levels.

- Support exists for CICS 1.6, MVS/XA and JES2 SP1.3.3.

SYSD reportedly operates under VS1 and MVS operating systems with CICS/VS Release 1.4 and above. Site licenses are available for \$8,500, with the first year of maintenance included. A 30-day free trial is available to qualified prospects, according to a spokesman for the vendor.

More information on SYSD is available from H & W Computer Systems through P.O. Box 4785, Boise, Idaho 83711.

Buffer Control Software Links Prime Systems to Micros, Nets

WOOD DALE, Ill. — Computronics, Inc. has announced the release of its input buffer control software for users who wish to connect their Prime Computer, Inc. systems to microcomputers, local-area networks or other high-speed equipment.

A modification of the existing Primos package, the software provides a buffer control for data coming into a Prime system on any asynchronous communications line. When a user has the input buffer control and the Prime computer buffers approach the full state, the Prime will send a Control-S to the microcomputer, local-area network or other device. When Prime catches up and the Primos buffer is nearly empty, the Prime will send a Control-Q character.

No extra software is needed on the remote device to support the operation. The buffer control feature can be enabled or disabled on a line-by-line basis. It is available for all Prime 50 series systems, including the Prime 2250. It will also work on the Prime 400 and 500.

The price of the input buffer control is \$600, which includes a one-year warranty

and all new releases of Primos that are required during the time period. A maintenance contract can be purchased after the one-year period for \$200 a year.

Prices are for single computer systems. Prices for additional systems are two-

thirds of the above prices for software and maintenance. A license covering the total number of systems on which the software will be used must be purchased.

Computronics is located at 130 North Ash, Wood Dale, Ill. 60191.

Financial Software Announced for Mark III Net

ROCKVILLE, Md. — A comprehensive, personal financial planning software system is now available on the Mark III teleprocessing network, General Electric Information Services Co. (Geisco) announced.

Execplan, developed by J. P. Sawhney & Co. of New York, reportedly provides a flexible system for financial planners to produce a comprehensive personal financial plan.

Execplan provides two modes of personal financial planning, according to the vendor.

Executive planning reportedly provides planning analysis reports, estate tax statements, left-to-heirs bal-

ance sheets and estate distribution flow charts; tax planning provides income tax alternatives and estate analysis.

Costs for using the system to develop a financial plan typically range from \$30 to \$150, according to a spokesman for the vendor.

More information is available from Geisco, 401 N. Washington St., Rockville, Md. 20850.

Jspool Driver Released For DOS 2.0

PALO ALTO, Calif. — Tall Tree Systems has announced the release of Jspool, an installable device driver for DOS 2.0.

Compatible with both parallel and serial interface ports, Jspool allows Xon/Xoff protocol and has nine special processing commands. These commands can be input by the user directly or placed at the top of text files and automatically input as the spooler processes each file, a spokesman said.

With these commands, the user can set tabs, odd/even page boundaries and the communications rate. These commands also control pausing or continuing print execution, flushing the spooler buffer and directing the output to one of seven printers, the spokesman added.

With Jspool, the size of the spooler buffer may be changed from 2K bytes up to 2M bytes. It is available now for \$40, including source code for the drivers, from Tall Tree Systems, 1032 Elwell Court, No. 124, Palo Alto, Calif. 94303.

Replace your lengthy COBOL, PL/I or assembler programs with SAS/IMS-DL/I, a high-level programming language for accessing and maintaining DL/I data bases.

Data base administrators: With SAS/IMS-DL/I you can test many structures as you design or modify data bases. Use SAS/IMS-DL/I to build test data bases, convert data bases from one structure to another, rearrange fields within segments, verify DL/I call sequences in program specifications and correct data in existing data bases.

IMS-DL/I programmers: Implement batch IMS-DL/I applications—data base maintenance programs or data report programs—with SAS/IMS-DL/I. Use IMS-DL/I logging to insure data base integrity and recoverability.

SAS users: Write SAS/IMS-DL/I programs to extract data directly from DL/I data bases without an IMS programmer.

SAS/IMS-DL/I—the kind of powerful time-saver you've come to expect from SAS Institute.

Boasts More Than 60 Variables

Text Editor Out for DEC VAX-11s

CAMBRIDGE, Mass. — Computer Corp. of America has introduced the Emacs text editor for Digital Equipment Corp.'s VAX-11 systems.

The product features more than 60 user-defined variables that allow the operator to customize Emacs to meet various application needs and different user styles. These include: horizontal and vertical multiwindowing; a set of forward and backward movement, deletion, justification, filling, centering and transposition commands for characters, words, sentences, para-

graphs, program expressions and arbitrary regions; text editing functions such as incremental search and query replace, automatic case adjustment, word abbreviation, movement of rectangular regions within tables and interactive spelling checking and correction; and a directory editor that allows viewing and modifying files and directory.

The product runs under DEC's VMS operating system or the University of California at Berkeley's version of the Unix operating system.

Emacs is priced from \$350 to \$850. Volume discounts and special rates for OEMs and educational institutions are available. Computer Corp. of America said from Four Cambridge Center, Cambridge, Mass. 02142.

'Capeditor' for Wang VS Handles Cobol Applications

TORONTO — A Cobol text editor for Wang VS series computers has been announced by Netron, Inc., which said the product features advanced diagnostics, logging and recovery facilities.

The product is an addition to Netron's Computer-Aided Programming (CAP) automated application development and maintenance sys-

tem. Capeditor reportedly features an on-line documentation system that can be accessed from any program by a single keystroke.

The product is available separately for \$3,000 or as a component of CAP Release 3.0.0, which costs \$32,000. More information can be obtained from Netron at 99 St. Regis Crescent N., Downsview, Canada M3J 1Y9.

T/S Service Enhances Program

BOULDER, Colo. — Tentime, a time-sharing service, said it has added to the financial modeling program it developed for Applied Data Research, Inc.'s decision support system.

The added features to Applied Data's Empire system include on-line computer-based instruction, forecasting, graphics, assumption analysis graphics, simultaneous equations, directory searching and editing, the vendor said.

The program also permits access to its own internal line editor, as well as to system editors.

The entire system is currently available from the vendor for \$70,000. Additional information can be obtained from Tentime at 5375 Western Ave., Boulder, Colo. 80301.

'Reporter' Targets System/38

OAK BROOK, Ill. — Michaels, Ross & Cole, Ltd. has brought to market a report writer for use with the IBM System/38 CPF Release 5.0.

Called the Reporter Version 1.1, the software is intended to be used with the company's Query series and is said to give nontechnical managers access to System/38 information.

The self-documenting package is said to allow media-independent query capabilities.

The price for the report writer is \$1,140, according to a spokesman. It is currently available from Michaels, Ross & Cole at Suite 501, 1302 W. 22nd St., Oak Brook, Ill. 60521.

General Ledger Package Supports IBM, HP CPUs

SUNNYVALE, Calif. — Data Design Associates has announced the General Ledger Financial Control System. The package is aimed principally at users of IBM mainframes and large-scale processors developed by Hewlett-Packard Co. However, the vendor said the package can be adapted to operate on most large mainframes.

The package uses English-language user commands.

The package includes an Automatic Interface Module which reportedly makes it easier to use the firm's Accounts Payable and Fixed Assets packages.

The package costs between \$60,000 and \$86,000, Data Design said from 1279 Oakmead Pkwy., Sunnyvale, Calif. 94086.

Measures Improvement Rate Productivity Service Debuts

MCLEAN, Va. — Quantitative Software Management (QSM) has announced a new software productivity service that is designed to determine a software organization's development capability and provide the means to measure the rate of improvement over time.

QSM's technique is a combination of quantitative and qualitative information

about a software project. Quantitative data provides the basis for objective tracking of productivity improvements. The qualitative data identifies the major productivity drivers.

QSM is able to quantify the benefits in terms of shorter schedules, dollars saved, manpower saved and return on investment in new tools and methodologies.

The price of the service is \$1,000 per system analyzed. Discounts are available for more than 10 systems, the vendor said.

QSM is located at 1057 Waverley Way, McLean, Va. 22101.

Gateway Links Micro To IBM CPU

SANTA ANA, Calif. — Laguna Laboratories has brought out its first data gateway linking personal computers to mainframes.

Christened the Decision-link/34, the gateway is a bi-directional interface between personal computers and IBM's System/34.

Made of a front-end controller and software, the new system includes a data base access module.

It also provides software that enables users of personal computers to query the mainframe and store results on a personal computer's disk.

Using one synchronous data link control communications channel, the controller can handle up to 16 personal computers linked to the mainframe via asynchronous modems or local cable connections, according to the vendor.

Price on an eight-port system is \$8,500, available in November, from Laguna at 1300 Normandy Place, Santa Ana, Calif. 92705.

Package Ties Graphics Kit To Library

BOULDER, Colo. — Robertson Software, Inc. has introduced a software connector to fashion an interface between Precision Visuals' device-independent graphics package and the graphics utilities library of the National Center for Atmospheric Research (Ncar).

Named the Ncar Connector, the collection of portable Fortran 66 routines links the public-domain Ncar graphics utility routines for mapmaking, velocity vectors and streamline fields with low-level routines performed by Precision Visuals' DI-3000 package, according to a vendor spokesman.

It is now available for \$1,000, from Robertson Software at 1001 Pine St., Boulder, Colo. 80302, or from Precision Visuals at 6260 Lookout Road, Boulder, Colo. 80301.

Our clients heard about us through the grapevine.

The word gets out. The word about an On-Line Human Resource System that's better. With very little effort on our part, data processing, personnel and financial executives have been hearing about us—and asking us to talk to them about ISI. And when we do, we win out over our competition 90% of the time. Clients recognize quality.

Clients like Ford Motor Company, Harvard University, The Washington Post, Hughes Aircraft Company, Bell Telephone of Canada, First Interstate Bancorp, Hartford Life Insurance and New York City Hospitals, to name just a few.

We know why we have the competitive edge. We have the industry's most advanced system architecture. We offer more on-line (real-time) payroll/personnel expertise than any other vendor. We deliver the best system documentation in the business. We're committed to customer service and we're ready and willing to be on-site to help clients with any aspect of their installation.

ISI software includes payroll processing and reporting, personnel management, position control, applicant tracking, career planning, affirmative action, and pension and benefits administration.

So, if you're even thinking about human resource management software, please do call us. We'd like to make your life easier now and in the future—with a product that speaks for itself.

Setting the standards for excellence.

BIM-EDIT vs. IBM ICCF: Higher productivity is the better deal.

When you compare program editor capabilities, there's no comparison between BIM-EDIT and ICCF. BIM-EDIT has more than 25 features that ICCF can't match. Time-saving, productive features like:

- fast, automatic recovery after CICS failure
- library backup without interrupting on-line users
- concurrent library member addition and deletion from batch and on-line
- immediate logoff from any point, including mid-edit session
- logon returns immediately to logoff point and status
- log session maintained per user of commands and responses
- line block group commands — copy, move, delete (cc-cc, mm-mm, dd-dd)
- easy switching between concurrent edit and display sessions
- access to all system commands from any screen or session
- high-speed, highly functional, POWER spool queue access
- spool access, edit, other session types, all use same scrolling commands
- multiple commands for one or multiple session may be entered at any time regardless of session type or position
- may end an edit session without permanently affecting the member
- hierarchical library directory structure
- edit lines up to 256 characters wide
- support for 3270 models 2, 3, 4, and 5
- dynamic adjustment of screen size support
- exit routines
- member name length up to 32 characters
- access control by sub-library, member, or access type
- Help screens
- implied objects of commands (uses last referenced member name)
- library directory always in alphabetical order

Compare the features. Compare the price. You'll agree, the higher productivity of BIM-EDIT is the better deal.

BIM has more than a dozen other DOS/VSE system software products, also performs systems programming consulting, and provides computer time services on a 4331-2 system.

CAD Drafting Systems Interface With IBM XT

NEW YORK — United Networking Systems, Inc. (UNS) has announced a family of two-dimensional computer-aided drafting (CAD) systems said to interface with the IBM Personal Computer XT.

Draft-Aide was developed by Safford Systems, Inc., and all rights have been acquired by UNS. The multidiscipline CAD software system is said to operate in production mode and features elaboration and magnification, data base manipulation/control function and component compatibility with the XT.

The line contains five products, all subsets of the Draft-Aide System 300,

'P-Stat' Package Available for Use On Apollo Micro

PRINCETON, N.J. — P-Stat, a data management and statistical analysis package from P-Stat, Inc., is available for use on the Apollo Computer, Inc. Domain microcomputer.

The P-Stat package offers interactive data management, data display, statistical analysis and report writing capabilities.

Features for P-Stat include an on-line Help facility, interactive data entry, relational data base capabilities, macros and a range of statistical commands, according to a spokesman for the company. In addition, P-Stat provides for expandability through a user link facility, the spokesman noted.

Domain computers are 32-bit shared network processors that range from the monochromatic DN3000 and DN420 to the color DN6000 workstation.

Each processing node offers up to 3.5M bytes of main memory with multiple window display.

The license fee for P-Stat for a single Apollo Domain node is \$2,000 for the first year and \$1,000 for annual renewal. Annual and perpetual licenses for multiple nodes are also available, as well as corporate site licenses.

Additional information about the product, which will be available for the Domain micro in November, is available by contacting P-Stat through P.O. Box AH, Princeton, N.J. 08542.

which is said to provide nearly 700 user capabilities for businesses that want to set up drafting service centers. It costs from \$50,000 to \$100,000. The five products are:

• **PRO 300** — Designed for large corporate or engineering departments and sophisticated users, it sells for \$25,000.

• **PRO 200** — Designed for professional users, such as architecture or electronic firms, requiring a "full-power" drafting package, it costs \$7,500.

• **PRO 100** — A basic drafting package, it was designed for users with limited drafting requirements. It is priced at \$595.

• **Academic 100** — Designed for use by universities and trade, technical and company-sponsored schools for training novice and advanced users, it sells for \$395.

• **Starter 100** — An introductory service, it costs \$95.

UNS is located at Suite 108, 7007 Gulf Freeway, Houston, Texas, 77087.

Text Processor By Hemenway Fits Two Systems

BOSTON — Hemenway Corp. has announced the availability of a text processing package for use on Motorola Versados and Hemenway's MSP/68000 operating systems.

The text processor, Texpro, formats text for typewriter-like printers and terminals. It accepts lines of text interspersed with lines of format control information and produces the text formatted into a printable, paginated document.

Any already available text editor may be used to create the input text file to be processed by the text processor. Texpro can be used to produce a variety of documents, including manuals, form letters and contracts.

The price of Texpro is \$500 per copy. The package includes Texpro text processor object code on an appropriate floppy diskette, user documentation and a one-year maintenance and support fee.

More information is available from Hemenway at 101 Tremont St., Boston, Mass. 02108.

Payroll/Personnel System Out

ROSELAND, N.J. — Automatic Data Processing, Inc. (ADP) has introduced a new payroll/personnel information processing system for companies with more than one site or 500 or more employees.

ADP's new service provides personnel analysis and reporting plus delivery of paychecks. According to the vendor, the data is entered directly into a terminal supplied by ADP, eliminating the need for hand-written input forms. The terminal is linked to a mainframe computer at ADP's re-

gional computer center via an on-line, dial-up modem.

The system uses Digital Equipment Corp.'s VT 131 terminal and 120 bit/sec modem. Users can patch onto the on-line system 24 hours a day, seven days a week.

The payroll/personnel system consolidates all payroll and personnel data from a company's various locations into a centralized human resources data bank.

Additional information is available from ADP, 405 Rt. 3, Clifton, N.J. 07015.

WE INTERRUPT THIS NEWSPAPER TO BRING YOU A SPECIAL REPORT

INTRODUCING COMPUTERWORLD REPORTS. Now get expert views on DP news, on your own time, on videotape.

These days the DP world changes at the blink of an eye. New industry trends. New hardware/software developments. New techniques. But now you can keep your eyes open to all of it.

Get the latest, most important news, the kind you'd draw from current seminars and countless journals, in a 30-minute videotape presentation: Computerworld Reports.

CW Communications and DELTAK, inc., have developed these unique programs—hosted by industry experts—highlighting the products, techniques and trends that are changing your DP world.

The series premieres with "Computerworld Reports: The Micro/Mainframe Link," an in-depth look at the exciting micro/mainframe

integration trend. You'll get front-line DP news on the products, options and applications available when easy-to-use personal computers are linked to information-rich mainframes. Find out what it means for users, for your DP department and for your organization as a whole.

And coming soon from Computerworld Reports: more timely programs including application development centers, computer security and integrated micro software.

So to keep up in a field that changes in a blink, keep your eye on Computerworld Reports. To order Computerworld Reports: The Micro/Mainframe Link, call DELTAK order entry at (312) 369-3000. In Canada, (412) 678-9222.

Micro Notes

Select Information Systems has announced that a French-language version of its **Select Word Processor** is now available for use with Digital Equipment Corp.'s Rainbow 100 microcomputers, with German, Spanish and Italian versions soon to follow. The software is base priced at \$495 from the vendor at 919 Sir Francis Drake Blvd., Kentfield, Calif. 94904.

Pinnacle Software Systems has unveiled two additional ver-

sions of its **Superlist Manager** system for use on the IBM Personal Computer and the Kaypro II microcomputer from Non-Linear Systems, Inc. The software reportedly combines a structured data base management system with a word processor. It costs \$249. The vendor can be reached through P.O. Box 1220, Fort Collins, Colo. 80522.

Xeno-Copy is a menu-driven software utility that reportedly allows 18 different microcom-

puters to transfer files directly disk-to-disk to IBM's PC-DOS format disks without any additional hardware or modems. The product is priced at \$99.50 and is available from Vertex Systems at 7950 West 4th St., Los Angeles, Calif. 90048.

North American Business Systems, Inc. has released its latest version of **Memory/Shift**, which is said to give the IBM Personal Computer XT many of the capabilities of Apple Computer, Inc.'s Lisa microcomputer. It reportedly allows the Personal Computer XT user to have up to nine programs in memory at the same time and enables the machine to work with two monitors at the same time. It is priced at \$99 from the vendor at 642 Office Parkway, St. Louis, Mo. 63141.

Advanced Systems, Inc. has announced the availability of its **Microtutor** interactive microcomputer diskette-based training courses to teach personal computing literacy and application skills on specific software. Microtutor courses include instruction on Ashton-Tate's Dbase-II, Visicorp's Visicalc and Lotus Development Corp.'s 1-2-3. Priced from \$55 to \$75, the courseware is available from the vendor at 2340 S. Arlington Heights Road, Arlington Heights, Ill. 60005.

Televideo Systems, Inc. has introduced **Telesolutions II**, a kit containing three software packages for use on the vendor's TS 803 and TS 1603 personal computers. The kit contains Televite for the first-time user, Telecalc for financial planning and business calculations and Telechart to allow users to display portions of the data in the spreadsheet graphically. Priced at \$795 for the TS 803 and \$595 for the TS 1603, the kit is available from the vendor at 1170 Morse Ave., Sunnyvale, Calif. 94086.

Lantech Systems, Inc. has released **Unetix**, a multitask operating system compatible with Unix. Stand-alone and networking versions of the package are available for 8086 or 8088-based micros, including IBM's Personal Computer. The stand-alone version includes a Microsoft, Inc. MS-DOS emulator. The first networking version is a distributed file system; a virtual file system for very large network installations is due by the end of the year. Unetix costs \$99 from the vendor at 9635 Wendell Road, Dallas, Texas 75243.

Fischer Innis Systems Corp. has introduced **Watchdog**, a software system said to provide data security and system protection for microcomputers with

hard disks. Designed for use on microcomputers running under Digital Research, Inc.'s CP/M operating system, Watchdog is priced at \$295. More information is available from the vendor at 4175 Mercantile Ave., Naples, Fla. 33942.

Business Software Pty. Ltd. has announced **Profin**, a financial analysis package running under Digital Research, Inc. CP/M-80, MS-DOS, and IBM PC-DOS operating systems. Profin requires a minimum of 64K bytes of memory and a minimum disk size of 240K bytes. Priced at \$295, Profin is avail-

able from the vendor at 1651 Third Ave., New York, N.Y. 10029.

Day One Software, Inc. has introduced **Day One**, a personal business software system for use on IBM's Personal Computer and Apple Computer, Inc.'s personal computers, among others. The software features multiple indexing, report generation, file scanning and search capability. Priced at \$495 for the basic version and \$695 for the advanced version, Day One is available from the vendor at 618 Shoemaker Road, King of Prussia, Pa. 19406.

BECOME A VSAM EXPERT.

SysEd's new 5-day VSAM course will make you a VSAM expert. You'll not only learn how VSAM works, but how to make it work well, and what to do if things go wrong. Even if you're already using VSAM, you'll gain a better understanding of its capabilities and flexibility... like how to select among the options VSAM offers for configuring data sets, both batch and on-line.

Our hands-on case study instruction begins the very first day. You'll write and test three real-life programs and use Access Method Services on our own 4341/II computer. There are eight 3270 terminals dedicated to the class. You'll receive individual attention from our experienced teachers, and you'll want to bring your actual programming and debugging problems to class.

SysEd's VSAM course contains the most up-to-the-minute information available anywhere, including the latest features and capabilities of VSAM, and is in line with state-of-the-art hardware.

SysEd courses are held weekly and on weekends at our training centers in New York City, Chicago, San Francisco and Dallas. On-site courses at your own computer installation are also available. *Classes are limited.* For early enrollment or more information call Dave Shapiro (212) 889-3386.

The hottest new incentive is junior common stock, pioneered by Genetech Corp. But the IRS has yet to rule.

Pay, Perks and Promises

By J.E. Richard and Michael F. Spratt

High-tech firms are creating compensation methods and reward systems almost as innovative as the products they manufacture.

The executive with an \$80,000 annual salary may earn a long-term incentive (in the form of founder's stock or stock options) that could make him a millionaire in three to five years. The \$120,000 executive in general industry would earn just a fraction of this fortune during the same period.

When Alan F. Shugart established Seagate Technology in Scotts Valley, Calif., in 1979, a handful of company founders bought six million shares for a fraction of a cent each. In 1981, the company went public with shares priced at \$10 apiece.

Several factors distinguish the compensation policies of high-

tech companies, including their relative size and stage of development. Contrast "threshold" companies with sales of no more than \$1 million to industry giants with revenues counted in the billions.

Affiliation — whether the company is independent, part of a large established corporation or one unit of a conglomerate — affects all human resources policy, especially compensation. Location is another variable because local culture influences corporate culture and, thus, corporate compensation policy.

Organizations, whether large or small, often search the same market for technical, professional and managerial people. In a reviving economy, the increased need for key people surely will affect personnel and compensation practices.

Perhaps the best way of looking at compensation practices is to compare high-tech companies with each other and then with general industry. First, here's a look at the executive level.

Base salaries for executives in small (\$2 million to \$50 million) and mid-size (\$50 million to \$200 million) high-tech firms usually are significantly lower than salaries for the comparable position in general industry or even in larger high-tech companies. A \$120,000-per-year position in general industry might pay as little as \$80,000 in a small or medium high-tech operation.

Why, then, are these positions in high tech so attractive? The reason: primarily because the total compensation package is highly leveraged. The \$80,000-per-year high-tech executive is likely to have annual bonus and

IN DEPTH

long-term incentive arrangements that potentially may provide him with far greater rewards than the executive in general industry can ever hope for.

The compensation practices and tactics in start-up and threshold high-tech companies best illustrate this potential. Key executives, working for salaries well below what they might command in other more established industries, receive options to purchase so-called "founder's stock." The price often is only several dollars per share, sometimes even dipping below one dollar. If the company is successful when it goes public, the executive reaps considerable rewards. Perhaps the best-known example occurred several years ago when Apple Computer, Inc.'s first public offering created several dozen "instant millionaires."

Even without resorting to founder's stock, more established and smaller high-tech companies provide stock option incentives that will attract and retain key executive talent. These companies have this advantage over larger high-tech corporations and general industry both: Smaller firms can risk a deeper dilution of their equity by issuing stock

'Smaller firms can risk a deeper dilution of their equity by issuing stock options to executives. Some can dilute equity by up to 30%, compared with 8% or less for larger firms.'

options to executives. Some can dilute equity by up to 30%, compared with 8% or less for larger firms. These companies can take this step because of their potential for rapid growth and the confidence that the investment community shows in them.

Of course, there are risks — for the executive and the high-tech company alike. Any growth industry is more volatile than general industry — a variable known as a higher beta factor.

Usually, a small surge in the general economy will yield a larger growth rate in high tech. These industries, for instance, were growing at a 30% clip just before the 1981 recession. During the recent economic revival, technology stocks are among the leaders, with many far exceeding the average increases in the Dow

Jones index.

But this "upside" potential is balanced by the inevitable converse scenario: A faltering economy generally will do greater damage to entrepreneurial efforts than to more firmly rooted industries. Between 1981 and the end of 1982, high-tech businesses suffered severely. Many companies in the semiconductor industry, for instance, were forced to cut back on production, lay off employees on all levels and in some cases even institute across-the-board pay cuts. Stock in National Semiconductor Corp. fell to about \$14 per share as recently as a year ago. (In the upturn, it has traded as high as \$60.)

So, for the executive seeking his fortune, high tech is not always a sure thing. (Witness the recent shutdown of Osborne Computer Corp., which just a year ago was selling

10,000 units a month.) But this uncertainty is the basis for executive compensation in this area. Growing a business in a competitive, quick-changing environment requires people who are risk-takers and entrepreneurially oriented. But the company gamble must be tied to their own personal risk.

Offering a large incentive in the form of founder's stock or other stock option arrangements accomplishes three objectives: It helps attract the right kind of person for a growing business; it links personal performance with the development of the company; and, by the nature of its payout schedule, it helps retain key people during the firm's early growth phases.

Retaining Executives

But even with the potentially lucrative compensation arrangements available to successful high-tech executives, many companies — particularly in the high-tech hotbed south of San Francisco — still are challenged to hold on to their top managers. Why? As the executives cash in on their options, there usually can be no repeat performance within their company. By this time, sales

Both letter-quality and draft hard copy

Fastest document throughput in its class

Both friction and tractor paper feed

Industry standard serial and parallel interfaces.

Better, more versatile operator controls

TI reliability

Compatibility with third-party and proprietary software

Better, more durable easy-access font modules

Introducing the TI 855 microprinter. No other printer says better so many ways.

Feature for feature, no other microprinter can match the versatility, compatibility, reliability and productivity of the TI OMNI 800® Model 855 Microprinter. Here's why.

Two Printers In One. With the TI 855 you get the speed of dot matrix draft copy. Plus the precise clarity of the most advanced matrix technology for letter-quality print. It's two printers in one — at one low price.

A Great Family Name. Texas Instruments is known for providing the world with the industry standard for printers — the TI 810. TI builds the same reliability into every 800 series microprinter. Both the 855 and the data processing Model 850 are part of the expanding TI line of high-performance, low-cost microprinters.

Hardware Compatible. The TI 855 microprinter is compatible with all major PC hardware. And it provides both serial RS232C subset and "Centronics-type" parallel as standard interfaces.

Software Compatible. The TI 855 uses industry standard escape sequences for compatibility with virtually all third-party software. And for those with proprietary software needs, a model is available with ANSI standard escape sequences.

Tough Font Modules For Quick Character Change. Three font modules can be inserted into the front of the printer at one time, and are accessed individually. Each contains both draft- and letter-quality character sets. They're easier to use, more reliable and more durable than traditional metal or plastic daisy wheels.

More Productivity Than Any Other Microprinter. The 855 offers both friction and tractor paper feed, to handle all types of word and data processing applications. A quick-change snap-in cartridge ribbon. Raster and mosaic graphics. And intelligent printing which maximizes document throughput — regardless of format.

Get the printer that makes for better information systems. For more information visit your nearest TI authorized dealer or write Texas Instruments Incorporated, P.O. Box 402430, Dept. DPF-00000, Dallas, TX 75240. Or call toll-free: 1-800-527-3500.

TEXAS INSTRUMENTS

Creating useful products
and services for you.

The Interac

Our word processor makes text composition and editing fast and simple. And with its link to the computer, it can also access data.

Electronic mail and filing make people and information far more accessible, whether they're across the hall or around the world.

Our Series 100 personal office computers handle a manager's individual needs, such as word processing, graphics and data analysis. They talk to big computers, too.

Economical computing with up to 56 terminals. That's what the HP 3000 Series 39 delivers. You can use it as a central processor in a small office or as part of a network.

This manager's workstation functions both as a stand-alone computer and a terminal. That makes it easy for business professionals to access the data they need for decision-making.

High-volume printing on this laser printing system virtually eliminates preprinted forms, letterhead stationery and long lines at the copier.

Data communications can expand The Interactive Office throughout the building or across the country.

tive Office.

Our high-performance HP 3000 Series 68 can handle over 200 interactive users while processing big batch jobs like the company payroll.

Graphics created on this color terminal can be plotted on paper or transparencies.

High-quality printing for business correspondence and reports can be generated on this letter-quality printer.

Report generation is simplified by special software tools which help business professionals create reports and summaries in a matter of minutes—without any programming.

Hewlett-Packard has made a major contribution to productivity in the office. Our interactive approach to office automation allows you to integrate the four major resources your staff needs to do their jobs faster and more effectively—document management, personal computing, support for decision making, and communications.

Based on an expanded, fully compatible family of HP 3000 computers, The Interactive Office brings powerful word processing, data processing and business graphics capabilities to a wide range of users, including secretaries, managers and other business professionals. So vital information and much needed computing power can be placed in the hands of everyone that needs them—within the same office or on the other side of the world.

If you'd like to see HP's Interactive Office at work, call your local Hewlett-Packard sales office, and we'll arrange a demonstration. You'll see what a difference it can make to your business today. And how it can grow to assure even greater productivity tomorrow.

For more information, send for our brochure, "The Interactive Office." Write to Bruce Woolpert at Hewlett-Packard, Dept. 03178, 19447 Pruneridge Avenue, Cupertino, CA 95014. In Europe, write to Henk van Lammeren, Hewlett-Packard Nederland B.V., Dept. 03178, P.O. Box 529, 1180 AM Amstelveen, The Netherlands.

PAY, PERKS, PROMISES

In Depth/6

IN DEPTH

probably are \$50 million to \$200 million or more. Further, continued high-level dilution of equity becomes inadvisable.

So, for those who thrived on risk and challenge, there is a great temptation to try it again. And many do just that, leaving to join new start-up companies. Then, too, there are those who joined a company too late for the first round of large-scale stock option distribution. They are ripe for picking by the emerging young high-tech firms that can offer them the potential for largess they just missed.

How, then, do more established high-tech companies and general industry manage to compete for executive talent? And how can they hold on to that talent once they have secured it? Several factors and practices are at work. First, not all competent executives thrive on the heavy risk and pressure that dominate the high-technology industries — particularly the threshold and small firms. So, there is a certain degree of self-selection that distributes this executive pool into appropriate positions. Still, there is the need for larger firms to assure themselves of some management continuity — to hold on to

their best people. And other industries also must recognize the lure of high tech.

The venerable Pepsi-Cola Co. learned this lesson earlier in the year when Apple Computer wooed and won over that company's highly regarded president, John Sculley. Recently Atari hired away James Morgan, former executive vice-president at Philip Morris, Inc. High-tech industry now is reaching out for non-technical executives with consumer products expertise.

Fighting Back

Larger high-tech firms and industry in general have been searching for ways to combat the aggressive compensation strategies of younger high-tech companies. One popular incentive is a restricted stock arrangement. Here the executives receive stock that is subject to various transfer restrictions until certain performance or time requirements are met.

But perhaps the hottest new incentive is "junior common" stock. Since it was pioneered four years ago by California's Genetech Corp., junior stock has been used by about 40 companies of all sizes. It appears to

be an increasingly popular vehicle for high-tech subsidiaries of larger companies. Under this plan, companies issue executives junior shares of their stock at a lower price than their regular common — a \$20 share

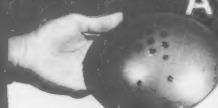

might cost just \$2, for instance — or grant it outright. Typically, junior stock provides no voting or liquidation rights, nor does it yield dividends.

After a period of three to five

AVOID DOWNTIME!

IN DEPTH

years, when defined performance hurdles have been crossed, this stock converts into regular common shares. When the stock is sold, all gain is, theoretically, taxed at a lower long-term capital gains rate. The company incurs no compensation expense and actually generates a modest cash flow if the stock is purchased instead of granted. The executive gets a solid reward and a tax advantage.

The major downside risk to junior common is that the Internal Revenue Service and the tax courts have not yet ruled on it. The tax consequences and potential compensation expenses of junior common, therefore, are uncertain.

Different Picture

The compensation picture for middle managers and professionals in technology industries is very different from the one for those on the executive levels. Here, extensive leveraging is impractical. (In start-up companies, however, where there may be only one or two engineers at the outset, it is common for these people to get "a piece of the action.")

Salaries, therefore, even in the smaller companies, are usually above general industry averages — in response both to the demand for qualified people and the premium that many high-tech companies situated in high cost-of-living areas (San Francisco and the Peninsula area, Boston and so on) must pay.

At the middle-management level, high-tech companies generally pay at the 60th to 75th percentile of the all-U.S. average. Our own surveys show that electronics engineers, at the technical center of most high-technology enterprises, are paid above all-engineer averages — at least 5% more at the managerial level.

But compensation for middle managers and professionals in high-technology companies differs in other ways. The pattern of supplemental income for these employees is distinct from larger industry. These differences are deliberate — a way for these companies to attract the kinds of people they need.

A Share of the Company

Results of our recent survey of 21 of the larger high-tech companies in the U.S. (\$300 million or more in revenues) clearly indicated that the compensation programs within these companies were driven by a desire to maintain a more egalitarian culture. To foster a "team approach," these companies emphasized sharing in company growth. For instance, profit-sharing programs are quite prevalent. Almost half of the companies in the survey had some kind of profit-sharing plan. On the other hand, a Hay/Huggins survey of more than 800 companies in a cross-section of large U.S. industry and business showed that only about one in five companies used this reward device.

In smaller companies, this share-the-wealth philosophy can be extended even further. Cullinet Software, Inc. of Massachusetts, for example, reportedly makes stock options available to its full work force of 800.

Another way that some high-tech companies promote a less hierarchical culture is by eliminating some so-called executive "perks" or by extending them and other compensation vehicles down to

broader levels of employees. For instance, while long-term incentives such as restricted stock or stock grant bonuses usually are reserved for officers in large industrial companies, the high-tech companies that use these vehicles offer them to key contributors.

At the same time, the executive perquisites that distinguish between the executive caste and others in the company are less noticeable in high tech. Only one perk — physical ex-

aminations — is present in more than half (67%) of the high-tech companies surveyed.

There are special vacation policies for executives in only 14% of the high-tech survey vs. a 40% prevalence in the Hay/Huggins survey. Again, only 14% of the high-tech sample provide loans to executives, compared with 47% in general industry and business. Supplemental retirement plans also were less prevalent — 24% as opposed to 59%.

Keep IBM's Best Technical Talent In Sight with SRA Video Updates

When hardware and software changes demand up-to-date technical information, make sure that IBM's technical expertise is on site and in sight... when you need it.

IBM's educational subsidiary, SRA, is now offering the expertise of IBM specialists in the **TECHNICAL UPDATE SERIES**. Each videotape provides the latest information on specific hardware and software issues, including:

- Performance Considerations
- Product Use Planning
- New Release Planning
- Installation Considerations

Save \$100 and be the first to know!

Update tapes can be purchased individually for \$100—but there is a better way! The **TECHNICAL UPDATE SERIES** is now available through a two-

year subscription from SRA. Choose 20 tapes from the update library for \$1600—a \$400 savings. And you will be one of the first to know about new tapes since all subscription customers will receive announcements directly from SRA.

Act now and receive four additional tapes!

Subscribe before October 31 and you will receive 24 tapes for the regular subscription price of \$1600—an \$800 savings.

The first step to becoming a subscriber is to find out more. Send in the coupon or call SRA today, and we'll send you additional information plus a Subscriber Agreement. Your subscriber agreement must be postmarked no later than October 31, 1983 to receive your four bonus videotapes at no additional charge!

Call SRA for details: 312-984-7124/7110

Hurry and send me more information so I can subscribe by October 31.

IN DEPTH

In medium and smaller high-tech companies, the distinction between executives and other employees probably blurs even more. There, systems of special perquisites are either very limited or nonexistent.

Key Contributor Programs

On the technical level, many companies face this compensation dilemma: Although technical professionals supply much of the energy and innovation necessary for success, they are

rarely eligible for the incentives available in executive compensation programs. How, then, can companies attract, retain and motivate their technical professional corps?

As mentioned earlier, above-average salary is one way. But this feature has its upper limits before it creates problems of "salary compression" — a subordinate's salary too closely approaches that of his superior. Many high-tech firms resort to the so-called "front-end bonus," a bounty

of several thousand dollars just for signing on. (About one-quarter of the high-tech firms in our survey indicated that they used this device, compared with only 5% in general industry.)

But the front-end bonus — very popular for geologists and petroleum engineers when oil companies were prospering several years ago — is a short-term compensation vehicle. It actually encourages job hopping rather than employee retention and

performance. A better program that high-tech companies are adopting gives a variety of awards to key contributors.

Special compensation practices to reward key contributors and contributions range from recognition awards (from plaques on up to large cash awards) to royalty arrangements for developing a new product. Computer and computer game software is one example of this. One large company reportedly provided personal computers to its employees, with this vast labor pool subsequently developing much of the needed software at a total cost far less than that of funding a research and development team.

But with few exceptions, most key contributor plans are not really plans at all. They are informal, fragmented and inconsistent in their application. Often they are reactive (responding to accomplishments) rather than proactive (encouraging them).

Approach-Avoidance

So while the principle of key contribution seems sound, there is concern over its potential to be counterproductive. As one executive recently remarked, "We reward the few and offend the many." This has resulted in a "approach-avoidance" conflict: Some companies have attempted to develop key contributor programs, only to back off when confronted with the possibility of negative effects and/or administrative difficulties.

Still, even though they may be difficult to develop and administer, soundly built and well-communicated key contributor programs can be effective — even essential. In the high-tech industry, where executives can become instant millionaires and income at the top level is almost open-ended, it is important for the "little guy" to operate in an environment where his special effort can yield some special reward.

Compensation practices, especially in technology industries, will not be stagnant. As companies grow and change, as new tax laws and rulings emerge and as executives and professionals manifest new personal aspirations, reward systems will adjust accordingly. The companies that will retain a competitive edge in the human resources marketplace will not necessarily be those who pay the most. Rather, the winners in the search for talent will be those who pay the best — pay the best people in a way that best suits both the strategic direction of the company and the individual needs of employees on all levels.

About the Authors

J.E. Richard and Michael F. Spratt are senior consultants in the San Francisco office of Hay Management Consultants. Richard specializes in developing compensation programs for executives. Spratt directs Hay consulting activities for high-technology firms.

SERIX™ High Performance UNIX™ for the IBM Series/1.

SERIX provides lower software costs plus these outstanding advantages:

A long term avenue for growth

- AT&T licensed UNIX — The Coming Standard
- Software portability
- Access to a large, growing software base
- Real-time extensions

Increased programmer productivity

- Programmer's workbench
- Large set of utilities
- Hierarchical file structure
- Synchronous, asynchronous and delayed processes

Delivers more power from the Series/1

- Optimizing C compiler uses native code features
- All code reentrant
- Swapping — multiple concurrent users
- Addresses the full megabyte of memory on the 4956 processor
- Disk interleaving capability

Included subsystems:

- Networking
- Electronic Mail
- Word Processing
- Resource Accounting

Optional systems:

- COBOL and other languages
- EDX-to-SERIX conversion package
- Database
- Spreadsheet
- SNA Communication
- The vi visual editor

INFORMATION ARCHITECTURE

By Edward Roche

To optimize information management on an enterprisewide basis, MIS can use information architecture — a global depiction of information flow supporting the organization's essential functions. Implementing this information structure requires a two- to five-year perspective.

For the systems development manager, information architecture uses conceptual tools to depict the underlying structure of corporate information flow in a manner intelligible to management. These tools provide a lens to focus on areas where systems development resources can be applied most usefully.

The concept of information architecture and how it may aid productivity is guided by an integrated business overview of the entire firm and its goals. Without such an agreed-upon overview, the organization cannot rationally apply technology to meet basic business needs.

A key decision facing top management of any corporation is how to find areas for investing capital within the corporation that have the highest potential for increasing total corporate productivity. Especially in the industrial sector, which is heavily capital intensive in machinery and physical stock, white-collar occupations are commonly managed as overhead items. Under these circumstances, major capital allocation decisions take place within the context of improving the physical plant. The white-collar section of the "plant" is ignored.

But this is not to say that no capital flows into the white-collar area. Instead, we occasionally find that white-collar expenditures and overhead are shooting upward at a rate exceeding available capital investment in crucial sectors of the corporation. The problem lies in the uncoordinated criteria governing capital allocation.

In the case of plant investment,

highly rationalized methodologies are employed for finding the optimum path. However, in the white-collar area, the discretion and standards employed are far less stringent. Since white-collar productivity is thought to be a vague concept (because it is more difficult to measure than blue-collar machine productivity), the stringent rationalizations applied to other areas are usually avoided.

At the same time the white-collar work force is undercapitalized, the information it is handling, manipulating and making day-to-day operational decisions upon is not being managed systematically and rationally. The cost of information — its creation, storage, manipulation and distribution — is impossible to account for in most firms.

Furthermore, various units within firms frequently use different forms of information when the substance is essentially the same. Various information "pools" are located in diverse sections of the organization

IN DEPTH

and growing rapidly, thanks to the expanding power of newer information technologies — first the photocopy machine, later the word processor.

In order for one division or section of a company to communicate with another, information frequently has to be translated into forms, symbols and languages compatible with the recipient organization. The number of clerical jobs with this process of simple translation as their

sole function has multiplied. Letters are changed into memos, memos are changed into letters, forms are changed into machine information, ordering information is translated into accounting information, inventory information is translated into sales and marketing information and so on throughout the firm.

As information is transferred throughout the business enterprise, accounting has little control over costs of discrete informational items

or over discrete information processes.

With the spread of office automation and management information systems, accounting has improved — but only for machine-held information. Remaining outside the comprehension of standard accounting systems is that vast amount of documentation and bureaucratic process that takes place on paper. In contrast to the MIS department, this vast world of information stores, infor-

mation processes and information flows is uncharted territory.

Its size is essentially unknown. Systematic rationalizations of its processes are difficult, and results of improvements are impossible to determine. In this world, costs are measured in terms so vague as to raise questions about reasons for measurement in the first place.

Firms are beginning to recognize that information technology can be a strategic weapon in a competitive environment. A fast-moving, transparent, flexible and reactive information system can go far in making those marginal differences in service, price and response time to customers that are necessary to gain market share or retain clients.

Companies such as American Hospital Supply have realized strategic improvements by placing order entry terminals in the offices of customers. And the new Citibank bank-from-home system is clearly an attempt to use the same strategy. Warren McFarlan has frequently argued that the most recent collapse of Braniff Airlines was due in part to its inability to control airline reservation systems.

Need for Comprehensive Model

The drive for improved reaction times of various company units and the increasing need for translation of information coming from other information pools in the firm have resulted in a natural desire that data elements, in either a paper- or machine-readable mode, be made consistent.

Individual decision-making units within an organization, at any level, should be able to receive information or reports concerning other distinct sections of the firm without having to rely on the personnel of those other units to produce the information required. If such a horizontal and vertical reporting structure is to be possible, then the walls separating different information units must be destroyed.

Although in many cases the information barriers, both horizontal and vertical, between different sections of the firm have become more transparent because of demand and frequency of use, this situation has seldom developed according to a well-thought-out plan. Such a plan would ensure that breaking down barriers would not result in creating new ones. It would also ensure a rational prioritization in allocating scarce human and capital resources. It should ensure that the sections of information flow given priority treatment are those that all agree are essential to the effective operation of the firm.

Finally, the plan must ensure that the criteria used for rationalization of information channels and structures within the organization conform directly with the corporation's long-term overall strategic plan, since rational information manage-

The Inspector IV MPC, The Detector II and Protector.*

Super Stars

These Media Management devices from Graham Magnetics keep your computer tapes performing better, longer.

Graham Magnetics' leadership position in computer tape technology has led to the development of three remarkable devices, each designed to do a specific job to reduce drop-outs, tape damage, stoppages and resulting system downtime:

The Inspector IV* MPC—This microprocessor-controlled tape evaluator/cleaner locates and isolates error-prone and damaged tape in your library. It can clean and evaluate a 2400' tape in just 3.6 minutes.

The Detector II*—Also microprocessor-controlled, this tape cleaner uses proprietary vacuum-grid cleaning tech-

nology to remove most error-causing contaminants. It can clean, retension and rewind a 2400' reel in 3.3 minutes.

The Protector*—This patented cleaner employs vacuum technology to remove error-causing debris, including micron-sized particles, from the inside of self-loading cartridges. It automatically adjusts to clean most cartridges in two minutes or less.

Graham Magnetics' position is simple: Put Epoch 480* computer tape in your library, then utilize our Media Management Program® to keep it in top shape. With Graham "Super Stars" in place, your media will last longer and run virtually error-free.

Act Now!—to improve your data center's productivity:

Marketing Services, Graham Magnetics Incorporated, 6625 Industrial Park Blvd., North Richland Hills, Texas 76118

IN DEPTH

ment is not a self-contained process independent of the business mission.

Incremental Changes

Information architecture is not being fueled by the realization that information itself, including the way it is processed, its range of application and its timeliness, is the firm's key asset. It is not being fueled by the realization that some overall plan for all information within a firm must be put into place. Nor is it driven by any overarching vision of the corporation as an "information machine."

These holistic and comprehensive approaches to information technology and management are not behind the transition to information architecture. Instead, the concept is driven by a series of incremental changes in the scope of information technology utilization within the firm. Various complexes of intensive information technology utilization are forming at increasingly lower levels, and both employees and managers are recognizing that these information complexes must communicate across departmental boundaries and geographical distances.

Older designs of MIS systems inevitably depended on a "paper nexus" — a boundary somewhere between the information machine and the broader corporatewide information system. Thus, an automated parts inventory subsystem, for example, would "talk" to the accounting department subsystem via paper-based intermediation. This paper nexus is being increasingly absorbed by direct hookup of previously unconnected information subsystems.

Piece by piece and link by link, these networks are being built on the foundations of paper-based systems. This information restructuring is a response to the need of information subsystems to maintain the same forms of communication with other parts of the firm as had existed under paper-based conditions.

Information architecture argues that such linkages should be made part of an overall plan. Furthermore, as automation of paper-based reporting relationships and their associated job functions takes place, a window of opportunity opens briefly to the possibility of restructuring

not only information definition, but job functions as well.

Although present in all sectors, this trend is most visible in the publishing industry in such newspapers as

The Financial Times of London, which recently suffered a prolonged strike in part over a proposal to let reporters file their stories directly into an electronic system. The recent strike against

AT&T by the Communication Workers of America also in part concerned the perception of possible "deskilling" of service personnel.

The negotiations in 1979 between the Ford Motor Co.

and the United Auto Workers union established a National Committee on Technology Progress to ensure workers were "upskilled" to automated processes. These examples point to the risks

Apple's new Lisa is the world's most powerful personal computer.

Its 32-bit MC68000 microprocessor gives it the processing capability of a mid-range mainframe.

It also has one million bytes of internal memory. And, with a 5-Megabyte hard disk, more than 15 times the on-line mass storage of standard microcomputers.

Given these most imposing credentials, one could get the impression Lisa was designed solely to scare one's socks off.

On the contrary.

What makes Lisa totally revolutionary is that, for the first time, all this phenomenal power is contained in a business computer you can learn to use in under 30 minutes.

200 years of hard work made it easy.

To tell Lisa what to do, all you have to do is point.

But achieving this simple concept required a totally new

Lisa's revolutionary software lets users perform several applications simultaneously, even "cut" and "paste" them together. The powerful project management program seen here is a Lisa exclusive.

approach to software and 200 person-years of development.

Lisa replaces complex computer commands with symbols

familiar to anyone who's ever worked at a desk.

Even someone who's never touched a computer before can learn Lisa in under half an hour. Versus the 20 hours or more required to unravel conventional PCs.

To information managers, that means dramatically reduced training time and increased productivity.

But people don't just learn faster on Lisa, they also work faster. Each of Lisa's powerful applications* use symbols and commands common to all.

So with little practice, users can move from LisaCalc to LisaGraph to LisaWrite without missing a beat. Or use them all at once, "cutting" information from one program and "pasting" it directly into another.

IN DEPTH

and opportunities inherent in aggressive automation efforts.

Information Machine

As efforts are made to transform the paper-based

substructure of the corporation to a computer-mediated superstructure, communication between various sections of the firm must take place. This communication must define those linkages

that both lend themselves best to computerization and conform with priorities of interdepartmental relationships. As automation of linkages takes place, definitions must be worked out regard-

ing individual communication streams, locations of data bases and sharing of costs for automatization. These definitions, in their final form, encompass the individual data elements.

With huge numbers of data elements in the firm and many interrelationships between fields of data at varying locations under the paper-based system, it is simply a matter of practicality that no comprehensive systematization can be created without a global, corporatewide view that relates all major business functions to their constituent informational components.

The information architecture management approach views the entire organization in terms of its informational superstructure. It also recognizes that as automation of the paper-based substructure takes place, large quantities of information will become redundant. The basic utility of the information architecture approach lies in its ability to consolidate the information and communications functions of the organization in accordance with structural rules derived not from cost/benefit analysis of single applications but rather from the functional principles of the business mission.

Charting Information Flows

Since the entire organization can be defined in terms of its information flows, the task of mapping the detailed informational structure can best be accomplished by starting with a macro-level simplified analysis of the aggregate flows of information and connection between large units of the organization. In the simplest form, the corporation takes in information from the outside environment and converts it to control signals that regulate the processing of raw materials into products.

The simplified model leads to further breakdowns of the categories of information coming into the firm. These include marketing information, intelligence on other companies, government regulations, prices of raw materials, labor demands, orders for products, announcements of new products and many other types of information. Within the firm also are myriad channels of communication and many different "families" of information: personnel records, payroll and accounting, the legal department, inventory management, internal pricing and chargeback.

As raw materials are processed into the final product,

Powerful connections.

Any Lisa system can become part of a powerful Lisa network through AppleNet, our own low-cost local area network.

It will enable a user to transfer documents from one department to another, so they can be rapidly reviewed. Or modified. Or passed on to other Lisas.

The same network will allow Lisas to branch out to other Apples. Or share disks, printers and other costly peripherals.

Using the LisaTerminal program, Lisas can tie into mini, mainframe and other personal computers by emulating VT 100-type terminals. Or, using the Apple Cluster Controller, it can also emulate 3270-type terminals.

In short, one Lisa can do the chores of many terminals. All of which means swifter response times and better distribution of resources.

Stay on top of new developments.

Lisa's unique user interface enables programmers to develop Lisa-style programs with unaccustomed speed.

But that's not Lisa's only programming attraction.

The Lisa Workshop provides a powerful environment in which to develop COBOL applications. A full screen Lisa-like editor, code generator, and multiple windows make a

visible difference in development times.

Apple will supply all the documentation, instruction, and support a developer will require to integrate applications into the Lisa environment — no matter how sophisticated their information processing needs.

We support the whole family.

Apple now offers nationwide on-site service for all Apples in conjunction with RCA Service Company.

The hand operated mouse lets you use Lisa without touching the keyboard. All you have to do is point.

Plus a host of special services for Lisa — including a toll-free support line.

All of which you may never need.

A diagnostic program called LisaTest instantly isolates any defective board or component.

And the modular "plug-in" design of Lisa's five basic circuit boards and two disk drives allows parts to be replaced in seconds, with just one tool: Your fingers.

For the whole story, call our National Accounts Program at (800) 538-9696.

No matter how large your company, Apple has all the elements to improve your information systems management.

Including Lisa, the computer that makes headlines.

*With more programs on the way, Lisa's library now includes LisaCalc electronic spreadsheet, LisaList data base, LisaWrite word processing, LisaGraph business graphics, LisaDraw presentation graphics, LisaProject electronic project management and LisaTerminal data communications. For information regarding corporate purchases through our National Account Program, call (800) 538-9696. In Canada, call (800) 268-7796 or (800) 268-7637. Or write to Apple Computer Inc., MIS/EDP Marketing Dept., 20525 Mariani Ave., Cupertino, CA 95014. © 1983 Apple Computer Inc.

There's even a program — LisaProject — that lets you use the mouse to chart the progress of complex projects, automatically recalculating when deadlines or resources change.

On paper, Lisa is just as exceptional. With its dot matrix and daisy wheel printers, it produces printed materials just as you see them on the screen.

AppleNet, available soon, will let Lisas and other Apples share information, and costly peripherals.

IN DEPTH

a large but finite number of repeated information flows takes place. Although at first these may appear chaotic, analysis can identify underlying patterns of interaction between different informational units of the firm. As these underlying relationships are discovered, the macro-level generalized representation of the firm is broken down into successively more detailed and refined maps.

At an even more refined level, each communication pattern and

channel is broken down into each of the types of information it transmits. These general types of information are then broken down to the individual data element level.

At this point, an entire information map of the firm is completed. It is as detailed as a blueprint for a building and may be called an information architecture. Each level of analysis, from the individual data element level up to the departmentwide or division level, is com-

prehensible to corresponding levels of management in terms of the other sections of the organization.

Functional Specifications

Once these informational flows and relationships have been identified and mapped, it is possible to trace how far into an organization a particular bit of initially external information goes. Some types of information are absorbed into the organization and quickly digested. Other

types of information might be passed along throughout the organization to different levels or divisions. Some types might be combined with information available only from inside the firm and then passed along further.

By tracing the paths of information flow throughout the different functional centers of the organization, it is possible to identify information flows by function. This process helps even further in prioritization tasks.

Ultimately, it has been determined that the patterns of information flow are by no means random. Information flows correspond roughly to hierarchical relationships within the organization. Information flows and functions associated with certain tasks are also identifiable. Since the organization's general business plan goes far in determining priorities for specific business functions, it should be possible, after having completed the above steps, to define needed changes in information relationships.

This can be done by analyzing the capabilities, speed, volume and capacity of the various functionally related communications channels. For information storage and retrieval, frequency of access and other factors should help in deciding the relative importance of each particular information pool or information channel to the function being supported. Obviously, for example, information flows supporting high-priority functions should not suffer barriers.

External Interfaces

Another problem being recognized by practitioners of information architecture involves the relationship between those "information accounting systems" pertaining to internally held information and those pertaining to external information.

One must recognize from the start that paying a great deal of attention to the channeling and handling of information within a firm will be ineffective in the end if the structure and volume of information flowing to and from the outside are not also taken into consideration. And the internal department structure should be designed to reflect the types of information relationships it must maintain outside its environment, either within the firm or external.

Without careful information architecture, there may be a tendency to design the operations of a given unit with a view to maximizing its internal efficiency and to design the external interfaces as an afterthought. When each unit is designed to be internally efficient, it might erroneously be thought that the "sum of the parts" — the whole organization — should also be working at maximum efficiency. This line of reasoning ignores the internal communication that must take place within the organization.

Further, for that level of analysis

IN DEPTH

in information architecture where the firm and its relationships with the business environment are considered, it is wrong to base designs of internal information and communications systems solely on criteria of firmwide efficiency.

Information architecture suggests that from its initial phases, any project to revamp an internal information and communication structure should give the external gateways and interfaces a weight proportional to their relationship to the overall strategic business plan. This rule is applied at the unit level as well.

Weberian Transformation

The commonplace paradigm in organizational theory used to describe the firm revolves around basic concepts best formulated by Max Weber. The Weberian concept of bureaucracy, and thus of business organization, is rooted in a pyramid-like hierarchical formulation of control in which general commands are given at the top and transformed into concrete discrete steps by an army of trained specialists at each lower step of the organization. Generally speaking, command information travels downward through the hierarchical organization, whereas reporting information necessary for intelligent control functions travels upward.

Under this system, the levels at the top of the pyramid frequently become overwhelmed with information. Although the velocity of information within the organization might increase dramatically, information overload can inhibit control function response time, thus harming the organization.

Occasionally, for efficiency, the higher levels of the organization are circumvented through informal communication networks. Rather than continue waiting for delayed responses from higher levels within the organization, individual units communicate with one another and make independent judgments about the most probable trajectory of a decision, based on previous experience.

As the information overload within an organization increases, these informal networks become more important because higher levels of the organization cease to exercise effective control and monitoring.

Information architecture recognizes that, at some point, these informal lateral networks are more important than the formal hierarchical system, traditionally measured in terms of span of control.

Generally, the reduction in effective span of control caused by increasing hierarchically flowing volumes of information can be mitigated to some extent by:

- Increasing velocity of information.
- Increasing selectivity of control information.
- Vertically delegating control functions.
- Increasing number of decision

'If products are expected to change in response to a cycle, it is natural to expect entire industrial sectors to do the same. Such an adjustment is impossible if the information systems — the nervous system of the organization — are hardened into a rigid structure.'

makers at the top levels of the hierarchy.

- Increasing number of effective

control decisions.

- Reducing amount of information required to make the same oper-

ational decisions.

However, these traditional techniques for handling information overload ignore the potential of the informal networks that are inevitably built up within the organization.

Information architecture would solve the span-of-control problem by first focusing analysis upon the functionally determined control networks operating within the firm. In contrast, traditional analysis would make remedial changes based on

A NEW TREND IN APPLICATION SOFTWARE SYSTEMS FOR IBM SYS/38

A TOTAL SOFTWARE CONCEPT

PCR's Resource Management System offers more than just application or data base software...more than simple integration or online capability. RMS/38 is a total concept software solution. RMS/38 is all the software you will ever need to unleash the power of the IBM System/38.

It's all native mode applications software. Ready to go to meet computer needs today. Ready to grow when computer needs change tomorrow.

Build a Solid Foundation

Build a comprehensive data base management system with a full range of applications integrated in flexible modular design.

Distribution, Manufacturing, Financial. You specify user functions. RMS/38 delivers high performance speed, ease and accuracy to carry the load.

Create a Flexible System

Create the system that suits your special requirements. Modular design makes it easy and economical to expand RMS/38 functions to your unique needs. Without extensive modifications. Without exorbitant costs.

Enjoy a System for Growth

When your computer needs change, use advanced System/38 programming techniques, a complete reference file and structured, well-documented RPG III code to expand capabilities without expanding costs.

Choose your building blocks from these applications, which operate individually or in combination:

DISTRIBUTION

- Order Processing
- Billing
- Sales Analysis
- Inventory Control and Purchasing

MANUFACTURING

- Product Structure and Costing
- Inventory Control and Purchasing
- Master Production Scheduling
- Material Requirements Planning (MRP)
- Shop Floor Control
- Shop Order Costing
- Capacity Requirements Planning

FINANCIAL

- General Ledger
- Accounts Payable
- Accounts Receivable

IN DEPTH

hierarchically determined control networks. Thus in the old paradigm, much effort might well be focused on packing more and more decision support capability at the higher levels of an organization, whereas an information architecture analysis might recognize that control can remain decentralized.

Surge Capacity

Using information architecture, priorities for allocating information

technology are based not solely on the level of perceived internal demand, but rather on the relationship between that demand and priorities identified in the business plan. Of course, those sections of the organization that have experienced overloading during peak periods and that are crucial to the conduct of business in a short-term environment would be designed to accommodate any surge in business activity.

The integration of this capability

into the design of a firm's information flows is particularly crucial in high-transaction, high-velocity business sectors. Seasonal or market-induced changes in demand can be large enough to harm the organization's competitive position if it should fail to meet the unexpected demand surge.

One indication of fundamental change in the infrastructure of industrial society is the shortening of the product cycle. Economic policy

has also had an effect upon the MIS environment insofar as capital available for investment has become more scarce. Increasingly, the argument is heard that just as separate products are subject to a product cycle, so too are entire industries. Analogously, if products are expected to change in response to a cycle, it is natural to expect entire industrial sectors to do the same. Such an adjustment is impossible if the information systems — the nervous system of the organization — are hardened into a rigid structure.

While virtually any information and communication system can be changed in response to industrial restructuring, a key question obviously is, "How much does it cost?" Information architecture would ask, "To what degree has the information system been designed to change its structure quickly — and inexpensively?"

To a certain extent, some of the same concerns that arise in designing a system for expansion also occur when designing a system for change — for example, modularity of peripheral and subsystem interconnection, transportability of hardware, ability to add on major computer interfaces. However, information architecture would recognize that the base of information structural change is the actual business requirements and corporate information flows, not the hardware systems that have been installed.

Organizational Benefits

Adopting a comprehensive information architecture approach will result in several tangible benefits to the organization.

1. Achieve Political Consensus.

Information architecture may begin both to address and to diminish the problems of perception that are straining relations between users, management and MIS. It does this by helping to communicate clearly how information processing and flows relate directly to specific business needs and activities.

Although a key barrier to the effective use of information architecture is politics, significant technical problems must be solved as well. The demonstration of tangible benefits that may accrue leads to a powerful political strategy for implementation.

When there is disagreement on the issues, political considerations tend to win out. Information architecture helps eliminate conflicting beliefs by promoting a common view of the business.

2. Speed and Service With Higher Revenues.

The quickening of information velocity throughout the firm directly increases the productive capacity of each employee and business unit. Decisions are improved and customers get better service. Information technology, therefore, can become a key factor in the firm's strategic

What good are they doing, unused on a shelf?

Put those back issues to work for you with the **Computerworld** and **ISO WORLD** 1982 Indexes.

You'll get great material for reports, back-up material for purchase decisions, resource material for contracts, research results for long and short-range planning — in other words — a terrific reference library at your fingertips when you use one of our Indexes to access all the information that's stored in your back issues of *Computerworld*, *ISO WORLD*, and *Computer Business News*.

With the *Computerworld* Index, you get an easy reference (including page numbers and issue dates) to all the information that's packed into all 58 (including *Extra!* and *Computerworld OA*) 1982 issues — 2,636 pages of news, stories, In-Depths, Special Reports, interviews, applications stories, features and tutorials on everything from AFIPS to Zenith.

And in the *ISO WORLD* Index, you'll find entries from 3 issues of *ISO WORLD* and from 36 issues of *Computer Business News* — 913 pages of industry news and trends, features, new product announcements, marketing and distribution articles, perspectives, columns, and analyses, on everything from AB Dick to Zentec.

Take a look at just a few of the hundreds of entries listed in the *Computerworld* and *ISO WORLD* Indexes:

Index	Heading	# Entries
CW	Local Area Nets	70
CW	Microcomputers	81
CW	Graphics Systems	136
CW	Accounting Systems	101
CW	Disk Equipment	126
ISO	Dealers/Distributors	64
ISO	IBM-PC	84
ISO	Floppy Disks	51
ISO	Modems	45
ISO	Retail Stores	53

And that's a sample of just this year. We also have Indexes for *Computerworld* that go all the way back to 1976 and Indexes for CBN back to the first — (Nov. 1978-Dec. 1979)

If you don't have all the back issues of *Computerworld* and *ISO WORLD* that you need to get the articles you want, you can order back copies for the entire year on 35mm microfilm from University Microfilm, Int., Periodical Entry Dept., 300 North Zeeb Road, Ann Arbor, MI 48106 — at very reasonable rates. Or you can simply take advantage of their reprint service for individual articles.

To get your Index, just fill out the coupon in this ad and send it with your check to Indexes/Marilyn Priante, Box 880, Framingham, MA 01701.

**INTRODUCING
GROWTH
WITHOUT THE
GROWING
PAINS.**

INTRODUCING

NOW YOU CAN CHANGE SIZES WITHOUT SURPRISES.

If you're a system planner, your biggest challenge is change. Future demands on your system are difficult to predict. Sometimes they're impossible to accommodate even when you can see them coming.

A VAXcluster™ system can change all that.

A VAXcluster is a unique way to loosely couple processors and transparently share all data among users.

You build a VAXcluster system by connecting one or more VMS™-equipped VAX™ processors over a dual path (70 Mbit/sec) Computer Interconnect (CI) to one or more of Digital's intelligent mass storage servers (HSC50). You can start a cluster with VAX-11/750s, VAX-11/780s, or VAX-11/782s. You can cluster up to 16 processors and storage servers up to 90 meters apart, then add communications links to your user community.

The processors and storage servers cooperate by sharing resources, processing work in parallel, and providing both hardware and software failover protection.

As your needs grow, simply add VAX processors or storage resources one at a time. The changes will be completely transparent to both your application software and your system users.

It's that simple. Because a VAXcluster system is more than just a collection of VAX computers. It's a collection of VAX computers you can manage like a single VAX system.

A VAXcluster is the most flexible approach to system planning ever devised. The first way to expand system capacity—almost indefinitely—without increasing system complexity.

Without compromising system performance.

And without obsoleting system investment.

You already know how powerful a single VAX computer is. Now imagine what you can do with a cluster of VAX computers sharing the load.

VAXclusters.

digital

BUILD A COMMON FILE NEVER OUTGROW.

EVERYTHING

SYSTEM YOU'LL

Shared data is the heart of a VAXcluster system. A common file system of virtually unlimited proportions that every user in the cluster can access simultaneously and transparently.

A VAXcluster is a loosely-coupled, multi-computer system with globally-shared data. Globally-shared data means that all mass storage devices are available to any user connected to any host. A cluster is comprised of VAX system processors, the HSC50 mass storage server and the Computer Interconnect. These components can be mixed and matched in almost unlimited ways to respond to growing application demands.

Digital's new HSC50 and the VMS operating system make this possible.

The HSC50 masks individual drive characteristics from the hosts, and with VMS, gives every authorized user in the cluster access to any file or record, from any terminal, through any host.

Each HSC50 supports over 10 gigabytes of disk storage. Since a cluster can contain many HSC50s, you can build a common file system of huge proportions while minimizing the cost of your mass storage investment.

Even a single VAX linked to a single HSC50 provides exceptional data availability and redundant mass storage through the HSC50's built-in volume shadowing and the CI's dual data paths.

Protecting your wealth of information.

Extensions to the VMS operating system are your key to maintaining data integrity in a VAX-cluster system.

Among them: Common Journaling to track file system activity as it happens and provide a precise means of recovering from failure. Recovery Facilities to protect the data from corruption. Checkpointing to protect each user's investment in computation. And a Distributed Lock Manager to synchronize access to common resources across the cluster.

In a VAXcluster system, information becomes the corporate resource it should be. Each user in the cluster, performing his or her highly specialized task, relies on the same body of information.

Information that's readily available, always up-to-date, and entirely managed by you.

VAX

IN DEPTH

development and competitive strategy, rather than merely an overhead item.

3. Rational Allocation of Resources.

A comprehensive information architecture approach should facilitate distribution of scarce information and communication resources so that they map more closely the firm's inherent information structure and its associated flows. To the extent that allocation of scarce resources is made in accordance with overall need determined by business mission, that allocation approaches rationality.

4. Security.

Information and data security within corporations has long been hampered by the artificial division between the paper world and the machine world. Corporations have built up elaborate mechanisms for protecting computer-held data only to find that once information is created in paper form, it easily flows to places where it could do potential harm to an individual or to the organization. As information technology spreads throughout the firm, and thus as increasing amounts of paper-held and manipulated information are absorbed into the machine domain, some improvement in ability to protect corporate information can be expected.

As the number of end users increases in the interactive environment, security administration will become a greater problem, since it is frequently found that individual access profiles must be set for each employee, a process that is not yet highly automated. Certain Western European governments will soon require presentation of corporate data protection plans. An overall security plan not meeting standards will be de-licensed.

Information architecture can help this process by enabling the corporate security officer, either within MIS or working in conjunction with MIS, to grasp quickly the possible avenues of "leaks" of important information from one system to the next. Instead of having to classify information at the data element level, information architecture should allow aggregate summarizations of security classifications, thus simplifying the process.

Another important factor is that not only data, but written documents, reports and memoranda can be equipped with an "audit trail" listing the number, type and time of each access. Each time a document is printed rather than read on a CRT screen, a record would be made. The amount of connect time would also be recorded, along with various other factors useful to security analysis. Ultimately, documents themselves could be encoded with an "information structure domain," which would specify the limits within the corporate information system beyond which they could not be transmitted or accessed.

'Information and data security within corporations has long been hampered by the artificial division between the paper world and the machine world.'

5. Flexibility for Change.

The adoption of information architecture should enhance a firm's long-term survivability by adding

flexibility for adjustment to severe destabilizing fluctuation in the environment. Dropping departments and divisions, cutting or adding workers,

forcing speed-ups in production and stretching out activities without substantially increasing costs should be more manageable and controllable.

Flexibility of information and communications structure should also enhance the ability of aggressive employees to learn more and take on increased job responsibility as they pick up competence. Organizational units being temporarily underutilized should be able to switch over and take on other tasks, which have

Take your microcomputer business around the world

The international microcomputer market is booming. An annual growth rate of 40% is forecast through the end of the 1980's. Countries that are recognizing the need to computerize their governments, industries, and universities are looking to low-cost micro computers, thus creating worldwide opportunities. Microcomputers are affordable, adaptable and efficient. And the supply cannot satisfy the demand.

Computerworld's international network of publications has the microcomputer market covered. We'll put you in touch with microcomputer buyers around the world through the special micro sections or monthly inserts in one or more of our 30 publications in 24 countries.

And we now publish separate monthly magazines for the microcomputer users in Australia (*MicroWorld*), West Germany (*MicroComputerwelt*), Sweden (*Mikro-*

Datorn) and Brazil (*MicroMundo*). Reporting the latest products and trends, these monthly magazines talk to the microcomputer buyers and users in these markets — in their own language — with locally edited news and international developments.

If you're marketing plans include the international market, the time to act is now. Micros are the fastest growing segment of the computer industry. Whether you want to test the market or are looking for a distributor or representative, we'll put you in touch with the right people around the micro world.

For more information on our international micro coverage, call Diana La Muraglia, Manager, International Marketing Services toll-free 800-343-6474 (in Mass. 617-879-0700) or return the coupon below.

IN DEPTH

"spilled over" from another section of the organization, on a temporary basis. If a corporatwide system is properly planned, this switch over would be possible without substantial hardware, training or software problems.

6. Inventory of Systems and Identification of Backlog.

In the past, MIS used various tools for setting priorities, including project backlog lists, which indicated that the average months of backlog can vary nationally from an average 26 months to five years. Other tools used include system narratives and specialized technology for documenting systems. The global and systematic overview provided by information architecture should yield a clear view of the backlog, but as defined by more comprehensive criteria than usual. The inventory of systems that should accompany any information architecture project will show where the concentration of effort and investment is likely to have the broadest payoff.

7. A Note on Frameworks.

As there is no standardized methodology, information architecture should define an internally consistent language that bridges the com-

munication gap between management and MIS. As it is applied to successively more detailed levels of the organization and as the individual data element level is approached, the fundamental properties, characteristics and internal logic of that language should not change.

When the focus shifts to how applications of technology can be directly related to strategic business issues, it should be realized that information architecture is not solely

About the Author

Edward Roche is an associate at The Diebold Group, Inc. in New York. He organizes the Diebold Research Interchange Service, a nonprofit organization that has reciprocal arrangements with a variety of institutions around the world. The service publishes a bulletin that summarizes ongoing research projects in high-technology, communications and management fields.

Roche is currently writing his doctoral dissertation in the Department of Political Science at Columbia University. The dissertation will focus on the political process within the Department of State Advisory Committee on Transborder Data Flow.

a technical solution. In fact, the technical side may be the least important. The key to the approach is that it provides a tool to communicate with and build consensus among nontechnical user managers and with senior man-

agement. All management should be able to discuss key issues coherently with reference to how information technology can be applied to meeting the business requirements of the enterprise.

Scribe supports laser printers

You've heard a lot about laser printers... high print quality, attractive fonts, fast, quiet, affordable. But you haven't heard a lot about software to support them.

The Scribe Document Production System supports more laser printers than any other software. Laser printers like the Xerox 2700, 8700, 9700, the IMAGEN IMPRINT-10, the Symbolics LGP-1, and soon the QMS Lasergrafix 1200.

Buying a laser printer? No matter which one you choose, you'll get the most from it with Scribe.

Computerworld/Espana makes talking to the Spanish computer market easy.

Spain has become a major and fast-growing market for U.S. exporters.

There are currently 4,000 general purpose computers at 3,000 sites in Spain at an installed value of \$2.2 billion. In addition, there are more than 11,000 office computers in operation. Industry revenues are increasing 20% to 30% yearly contributing to Spain's GNP growth of 9% annually for the last three years. To meet this growing demand for DP equipment, products and services, computer professionals read *Computerworld/Espana* when they look to buy. *Computerworld/Espana* is the only EDP newspaper serving the Spanish data processing market. Modeled after its sister publication *Computerworld*, it is a weekly tabloid with the most up-to-the-minute information for DP professionals and users who need to keep informed on the fastest growing industry in the area. And now, *Computerworld/Espana* makes its mailing list of 9000 EDP and MIS executives available for rental. This is a unique opportunity to test your product or service in this burgeoning market.

For further information on advertising in *Computerworld/Espana* or its mailing list, just fill out the coupon below.

Education Before Change In Systems Implementation

By Gloria S. Bronsema and Peter G.W. Keen

The complex process of developing large-scale information systems is too often marked by failure. During the past decade, several methods have emerged to improve the development process. They are: 1) systems development life cycle — a methodology for project management that focuses on planning, not coding; 2) software productivity tools, including structured methods, automated design and documentation aids and walk-throughs; and 3) implementation strategies — strategies that concentrate on managing organizational change caused by new technologies and systems.

The focus of this article is on the last method — implementation strategies. There is a growing body of conceptual and empirical (descriptive and prescriptive) research that provides the basis for implementation strategies that are as well-formalized as the systems development life cycle. The implementation cycle

is the behavioral equivalent of the systems development life cycle. It emphasizes consulting skills and facilitation and defines the role of implementor as that of change agent.

We will first discuss implementation education as the vehicle for change. One study indicated that the likelihood of success in an implementation effort increases substantially if there is a strong commitment to use education to lead the implementation process, rather than to use training to follow it. Two additional studies suggested that education has the potential to be a major, formal component of the implementation cycle.

We will discuss the principles that were used in one particular education intervention workshop called "Preparing for IPS" (Integrated Processing System). The workshop was given in a major bank, hereafter referred to as Megabank, in a country we will call Hyperion. (A central branch is generally regarded as a single country.) The purpose of the education intervention workshop was to prepare middle managers for a large-scale systems implementation in which their commitment and partici-

pation were crucial to its success.

A Case Study: Megabank Hyperion. Integrated Processing System is a real-time processing system that integrates the major services and products of an international bank, Megabank. IPS is a strategic innovation in terms of the bank's technology, business activities, work flows and organization. Although the system was originally intended to be highly generalized, in practice, substantial local modification was needed to adapt it to the local banking procedures, government regulations and market characteristics.

The success of this system, which is being implemented in more than 60 countries, has varied widely. In some countries, IPS has been disastrous — behind schedule, disruptive and expensive. In other countries, however, implementation has gone relatively smoothly.

Megabank Hyperion is a medium-size central branch and is just beginning the IPS implementation. Responsibility for implementing IPS in Hyperion falls to the operations division, known as the "back office" of the bank. Operations handles all aspects of processing, including

Message Center/Directory from AT&T Information Systems displays visible proof that you can be out of town, out of the office,

but never out of touch.

It will *never* forget you.

It's a personalized call coverage and information system. With it, one trained attendant can act as a backup personal secretary to you and 149 other busy managers.

Calls to unanswered or busy phones are automatically routed to the Message Center attendant. The display lets the attendant know where you are, why you're there, for how long, how you can be reached—or anything else you want to leave as a message.

You can retrieve your messages three

ways: from a display unit, on electronically-printed hard copy, or with a call to the attendant.

The Directory function adds to Message Center. It's an on-line database that gives you continuously updated information about fellow employees. Information such as name, extension number, location, title, department, and up to ten other fields of information.

The result? Vastly improved call coverage, better information flow, no unanswered phone calls, no missed messages, *no more pink slips.*

Directory

©1983 AT&T Information Systems UNIX—a trademark of AT&T Bell Laboratories

Message Center/Directory is just one of several office management applications available on DIMENSION® 600 and 2000 systems and the new System 85. You can hook up a few individuals or your entire company. It's your choice.

System components and features are customized to fit your needs.

The *Information Controller* is the switching hub of the system. It is connected to the *Applications Processor*, a fast, powerful minicomputer with software that supports several new user-controlled applications.

Its UNIX™ operating system creates a fully interactive multi-user environment.

You can attach any combination of peripheral devices: voice-only terminals, voice terminals with 40-character displays, data terminals with full CRT screens like the 500 BCT pictured above, or new intelligent terminals that combine voice and data functions in an integrated workstation. And there's a full line of printers.

Message Center/Directory was developed by Bell Labs systems designers who now work for AT&T Information Systems

Laboratories. Built by AT&T Western Electric and maintained by the largest service organization in the industry, it's part of a fully integrated product line designed to help your business do business better.

That's our message loud and clear.

To find out more, call toll-free 1-800-247-1212, Ext. 879M.

Information Systems

IN DEPTH

computer components. The marketing division, known as the "front office," has up to now focused mainly on loans. But because the worldwide corporate banking market is rapidly changing, cred-

it-based products (loans) are only marginally profitable. Growth in revenues and earnings depends on asset-based and fee-based services, such as leases, balances and trade financing. It is essen-

tial that the implementation cycle involve both operations and marketing divisions because IPS will serve as the technical base of Megabank's marketing strategy for electronic banking.

There is, however, a distinct culture gap between the marketing and operations personnel in Megabank Hyperion. Marketing personnel are considered the "elite," and they know little about

computers. Operations personnel, including systems personnel, are psychologically and physically isolated from marketing, as is the case in most branches.

IPS implies a major shift in how the bank should function. Thus, in order for the IPS implementation to be successful, this culture gap will have to be closed. Although many managers speak of the need for "user involvement," marketing does not want to participate. Hyperion's attempts to narrow the culture gap and to involve others in the implementation of IPS have thus been largely unsuccessful. The question is, "What should or could Hyperion management do next?"

Since the bank's need at that point was to change people's attitudes and actions, some intervention aimed at achieving this end was needed. While a training program had been tried before, it had largely been ineffective. This time, Hyperion went outside the organization for help. Hired as external consultants, we were asked to develop a workshop that was explicitly aimed at "technology mobilization" for IPS.

The main objectives of the IPS workshop were: 1) to close the culture gap by changing attitudes between operations and marketing and 2) to ensure that participants understood the implementation plans and the need for initiating actions on their own (action creation). The workshop was based on general models of implementation, with case studies and structured interviews being integral parts of the design process.

Eight Principles

Our particular work — the design and delivery of the workshop — was based on eight general principles. The principles are grounded in implementation research. We believe these principles are valid and valuable and can serve as general guidelines for the design of future education interventions. Our design was based on the following principles:

1. Use data from the participants' world as the basis for examples and discussions.
2. Demonstrate senior management commitment.
3. Provide a forum for participants to express concerns and to get answers to their questions.

GIVE US YOUR PROGRAMMER FOR A WEEK.

WE'LL GIVE YOU BACK A ZEALOT.

ZEALOT. n. One who is filled with enthusiasm. Once your programmers use a Microdata system, they'll never be satisfied with conventional computers. With the protocol of Job Control. The copiousness of COBOL. The drudgery of documentation.

Microdata's relational data base lets users get the data they want. In the format they need. And our ENGLISH retrieval language is as familiar as its name. Anyone can talk to a Microdata computer, and get respect.

With our ALL application generator, they define the application through an interactive, menu-driven session at the terminal. Prompts, labeling, data checking and format documentation are handled automatically. So they concentrate on the task, not the code. And productivity can increase ten-fold or more.

When your programmers see how ALL frees them from maintenance and documentation, they may actually stop reading the help wanted ads.

Perhaps the best way to appreciate the Microdata difference is to attend a Microdata zealots — er — users group meeting. But be warned! You can't go home again.

Put some zeal in your programming department. Write Microdata Corporation, P.O. Box 19801, Dept. T-208, Irvine, CA 92713.

Microdata
SIMPLY POWERFUL

Microdata is a subsidiary of McDonnell Douglas Corporation.

IN DEPTH

4. Provide an opportunity for action.

5. Move the sequence of events; that is, begin with the concrete, move to the abstract, then to the reflective and finally to the active.

6. Limit the number of participants: select a heterogeneous group.

7. Select a teacher with research, consulting and teaching skills.

8. Conduct follow-up activities.

Each of these principles is discussed in detail.

1. Data from the participants' world. Information technology is at the same time both concrete and abstract. The concrete components are the hardware and the program code, and they can be presented clearly in any course or seminar. The abstract components, which are so often critical in implementation, are not so clear or easy to discuss. These abstract components include:

- General psychological, organizational and political issues.

- Management process.
- Systems-user culture gap.

- "Resistance to change."
- User involvement and management commitment.

These abstractions must be made concrete so participants can move from principles to procedures, from ideas to action, from intentions to commitments.

In many ways, education for implementation is a form of action research. A key first step is to identify feedback to the organization regarding its perceptions, problems and needs. Hidden agendas must be brought out, and examples and discussions based on the participants' context (not on some distant, general and semirelevant case) must be presented.

We developed a general approach to collecting such data and have applied it in many settings. Using this approach in Megabank Hyperion, we spent approximately

one week interviewing 30 people at all levels of the organization. A structured interview format was used to focus on:

- The subjects' knowledge and perception of the

information system and the implementation process.

- How their work is likely to be affected by it.

- Their expected and anticipated role in the implementation.

- Their views on how and when a course, seminar or other education intervention could help smooth implementation.

- Their recommendations on what management should

be doing to help provide commitments, resources, directives and mandates.

The Hyperion interview data revealed consistent, well-articulated areas of concern that needed to be

HOW CAN ANYONE BE PRODUCTIVE FOR EIGHT HOURS IF THEY LOOK LIKE THIS AFTER FOUR?

For most people, computers have become a way of life. Unfortunately, if the computer is poorly designed, it can mean a life of bleary eyes, stiff backs, and headaches.

At Burroughs, we've been doing something about these problems—by continuing to study the effects computers have on the people who use them. This is referred to as the science of ergonomics.

And out of this science we've developed a full line of ergonomic terminals and workstations, including the Burroughs ET1000 and 2000.

We found, for example, that small computer screens with poor lighting often cause strained eyes and throbbing heads. So we designed a large, adjustable, 14-inch non-glare screen with high character resolution for sharp, precise images that are easy to read.

We found that it's a lot easier for people to tilt a keyboard than it is to tilt their backs. That's why our ET series comes with a low profile, detachable keyboard that adjusts to three different heights.

We've even gone so far as to make

an adjustment for something as small (but annoying) as a key click.

Of course, this sort of attention to detail is exactly why Burroughs continues to remain a leader in the computer industry.

You see, the real measure of a computer company isn't only how well their computers work. But how well a person works with their computer.

For details call 1-800-621-2020.

IN DEPTH

discussed openly. Managers often had an incomplete or even inaccurate understanding of their own organization, especially of the lower levels. For example, they tended to assume that subordinates had more understanding of the system and its goals than the subordinates really did; or, the managers ascribed more commitment and involvement to subordinates than really existed.

The interview data also provided a base for writing a case to be used in

the implementation workshop. Case studies are useful components of any course on implementation. Too often, however, the case is a disaster study. Using such a case has several disadvantages. It associates computer systems with failure and provides only negative guidelines: "Don't do the stupid things these people did!"

For this particular IPS implementation workshop, we developed a case study that showed a fairly successful implementation strategy. The

workshop focused on issues raised in the interviews, such as: 1) the need for user involvement to be real and sustained; 2) the importance of liaison roles; and 3) the need for careful phasing, which may conflict with management's wish to speed things up and meet artificial deadlines.

The case was presented as a development effort similar to Hyperion's. It was a form of "faction" — factual fiction. In other words, the terminology, jobs, concerns expressed and po-

tential problem areas in the case more or less matched Hyperion and IPS.

Implementation Effort

Implementation is a dynamic process including cognitive and affective components. The stakes are often high; people see computers as affecting their sense of self, their jobs and skills, politics and organizational relationships. It is hard to elicit these perceptions and processes except by letting people express their views in their own way. We therefore view our research as a form of detective work and discovery.

There are contradictory perceptions of "fact," subjective perceptions and historical factors that shape the context of the implementation effort. The data collected via the structured interviews is a form of text to be analyzed in terms of themes, motifs and key words, in the same way as a literary text is.

Both implementation research and implementation education benefit from being rooted in the data taken from people's own words. The "texts" from the interviews were integral to the design of the IPS workshop and to the case in particular. The use of anonymous quotations from the interviews gave a concreteness, immediacy and "relevance" to the education curriculum and process.

Obviously, it is more expensive to spend one to two weeks interviewing than it is to use "off-the-shelf" material to design a workshop. But whether it is effective to do so, in terms of cost/benefit trade-offs, depends entirely on the behavioral objectives of the education effort. If the goal is information sharing rather than action creation, off-the-shelf components may be fully adequate. But we conclude from our experience in Hyperion and elsewhere that the investment in collecting data to

WHAT THE HECK IS AN EXECUTIVE WORKSTATION?

A lot of people have the wrong idea of how you should use a personal computer. And fancy phrases like "executive workstation" only hide the benefits of personal computing under a cloud of tech-babble.

The fact is, instant information and a computer on every desktop don't always mean bigger profits and more efficient workers.

Because when "non-computer people" use personal computers in business, the *software* they use is always more important than the hardware that's used with it.

But sometimes this software's just too hard to use, or can't do the job. Or it's already out-of-date. All of which confuses the same people it should be helping. We'd like to clear up some of that confusion.

THE CONTEXT MBA: IT TURNS EXECUTIVE WORKSTATIONS INTO "EXECUTIVE THINK-STATIONS."

The Context MBA is software that lets you use the personal computer as a creative tool for better business decisions.

We've combined the five most useful business functions of all personal computer software - electronic spreadsheet, graphics, information management, report writing, and communications - into one easy-to-use, integrated product. Designed for businesspeople, not programmers.

This means you only need one software package to make your personal computer do everything it was designed to do in the first place. And then some.

TURN BUSINESS DATA INTO BUSINESS INTELLIGENCE. INSTANTLY.

By building five major functions into one software package, the Context MBA helps you to make better decisions from the large amount of data that's unique to your business.

With the MBA, for instance, you can connect a personal computer to your company's main computer to retrieve business information. Like

sales figures, operating expenses, or product reports. In minutes.

Store, edit, sort, or modify this information on your personal computer and use the MBA's electronic spreadsheet to create a "model" of your business.

Develop plans and forecasts in a fraction of the time it would take to do them by hand, or by using a single-function software package.

While using the MBA's spreadsheet function, you can instantly graph and chart vital figures on the same screen. So, as you make cost or revenue assumptions, you can see immediately how the result would affect your business - this year, and five years from now.

And when you've made your decision, use the MBA's executive report writer to put words, numbers, and graphs together in a clean, printed report.

It doesn't take a computer to tell you that this kind of control over business facts, figures, and alternatives gives you an edge on the competition and a head start on each new day.

SEE IT NOW.

The Context MBA can be used on the IBM Personal Computer, the IBM PC-XT, and the Hewlett-Packard Series 200 personal computers.

Call us at 1-800-437-1513 (in California, call 1-800-592-2527) for the name of your nearest Context MBA dealer and a copy of our tell-it-like-it-is brochure, *Software Explained*.

If you have an IBM PC, we'll also be glad to send you a free copy of our Context MBA Sampler Disk that gives you a live demo of the MBA.

**Finally. The End To
Floppy Disk Confusion:
Color-Coded Diskettes
From Janus.**

Janus Floppy Discs.

We're Janus. And we make floppy discs of the very best quality you can buy. Period.

To back this claim, we offer our —

Unconditional Guarantee.

Every Janus floppy disc comes with an iron-clad guarantee. If anything ever goes wrong with your Janus disc — anything, anytime, anywhere, your fault or ours — we will replace it. Free. No questions. No strings. No kidding. Just send it back to Janus (or return it to your Janus dealer).

And We Didn't Stop There.

We wanted to solve the problem of floppy disc confusion. The Janus solution is color-coding, which makes it easy for people to select the right diskette and virtually eliminates the possibility of using the wrong diskette in your computer.

Janus is also sponsoring one of the largest

new software contests in the country. Some very smart software designers will share \$34,500 in awards. (Details follow.)

And, there's "Janus Gold Certificates" — credits you earn each time you purchase Janus diskettes. Use them to obtain the innovative software developed from the nationwide "Janus Call for Software" contest.

Best of all, Janus quality and Janus innovation are now available in local stores.

You can spend less for other diskettes. But today's "bargain" is often tomorrow's problem. After all, if it's worth putting on a diskette, it's worth buying a diskette you can count on. From Janus.

JANUS: THE CO

Does your computer system require a two-sided, single density disc? Or a one-sided, double density disc? Are you sure? What happens if you get the wrong one?

34,501 Good Reasons to Enter the "Janus Call For Software" Contest.

The First 34,500 are Simple.

That's how many total dollars in prize money we're offering to winners who submit the best original software programs in five different categories, written for the IBM PC® (MS-DOS 1.1) and the Apple II+® (DOS 3.3). Along with cash rewards, winners will have their programs published by Janus and be eligible for royalties.

The Categories:	1st Prize	2nd Prize
Business applications	\$6,000	\$1,500
Home applications	\$6,000	\$1,500
Games and entertainment	\$5,000	\$1,500
Education	\$5,000	\$1,500
System software	\$5,000	\$1,500

All prizes will be awarded. While a software package may not win a prize, it could be accepted into the Library of Janus Software with royalties for the author based upon sales.

How to Enter.

Simply call toll-free (800) 338-0100 or write to the "Janus Call for Software" at the address below. Everything you need to enter will be sent upon your request. Entry forms may also be secured from your Janus dealer.

Who May Enter.

Anyone who has a completed software package may submit it in abstract form to the

end on November 30, 1983 for initial entries. Finalists will be notified on or about January 1, 1984 with two additional weeks to submit completed and documented entries. Final judging and awards will be made on or about March 1, 1984.

The 34,501st Reason to Enter?

Fame.

It goes well with fortune. And together they can provide a real payoff for that terrific software program you've been working on for so long.

But you have to enter to win. So do it today.

Simply call toll-free (800) 338-0100.

Or write "Janus Call for Software," 1860 Barber Lane, Milpitas, California 95035. Be sure to include your name, street address, city, state, zip code, and telephone number.

WHAT'S THE FUTURE OF MICROS IN YOUR ORGANIZATION?

Turn to "The Micro Mission" this fall and get the future mapped out for you.

What's the future of Micros in your organization? Turn to "The Micro Mission" this fall and get the future mapped out for you.

This November, *Computerworld* will give you an Extra! you can't afford to miss. Not if you plan to take advantage of the hundreds of possibilities micros give you. You'll get articles, interviews, applications stories, tutorials, market data, and advice from the experts — a whole issue of *Computerworld Extra!* devoted to "The Micro Mission." And it will come in the mail at the end of November as a bonus issue! You don't have to do a thing. Just look at what's coming to you:

You'll get an examination of the politics of microcomputers in organizations; a roundtable discussion by DP/MIS experts dealing with a wide range of topics relating to personal computers — from selection to implementation. And, there'll be a whole article devoted to how large companies deal with training personnel to use personal computers.

You'll get articles on:

- The types of peripherals available for setting up an overall system
- Word processing software for personal computers
- An evaluation of spreadsheet software for personal computers
- Networking personal computers into the corporate database
- Maintenance, service and support policies of vendors
- Database management systems on personal computers

And there'll be a special profile of an operating information center where employees are trained on the use of personal computers. You'll see how they're helped in selecting the right product for their needs and how they're aided in implementation and ongoing training. You'll also get a look at the financial ins and outs of the market, pros and cons of personal computers replacing CRTs, and . . . you get the idea. You're going to get a whole issue packed with news on micros you can't afford to miss.

And if you sell micros and micro products, you shouldn't miss this opportunity of having your product represented in this *Computerworld Extra!* issue that will be saved and used as a reference. The deadline for ads is October 21. To get your space reserved, call Don Fagan, Vice President Sales/Marketing at (617) 879-0700 or call your local *Computerworld* sales office, listed below.

IN DEPTH

ground the content and process in the participants' reality is often essential to make education a mobilizing force for implementation.

2. Senior management commitment. The need for senior management commitment is well established in the MIS implementation literature. With IPS, virtually every manager interviewed spoke about his commitment. However, there is a catch: What is commitment? Is it an expression of support, a willingness

to allocate funds and staff, active leadership or a statement of expectations? While many senior managers see their verbal statements as "commitment," their subordinates watch what they do rather than what they say.

Effective commitment involves a public investment of time, prestige and attention. In other words, the manager's position, prestige and success are linked to the success of the implementation effort. The manager

provides authority and accepts accountability. Subordinates who are given authority are also *de facto* held accountable.

It was clear from the IPS interviews that subordinates tried to decipher what management's real intentions were, and they ascribed motives and set their own agendas according to their deductions. Lack of senior management commitment or inconsistent commitment was an important signal to others in the or-

ganization. This finding was very relevant, and we made it clear to Hyperion's senior managers, particularly to the country head, that there was little point in designing an IPS workshop unless they demonstrated — not just stated — their commitment. Such a commitment required that the country head explain the wider goals and context of IPS, instead of leaving it to the staff to work out the details. (Not surprisingly, workers often assume that the main intent of the organization is to reduce head count or beat the unions.) Thus the country head and head of operations addressed workshop participants to clarify the business aims that led to IPS and to outline the overall planning process, roles and phasing.

In addition, workshop participants had the opportunity to indicate in writing what additional actions, resources or information were needed from senior management. Unanswered questions, unresolved issues and suggestions for implementation were presented in a memo to senior management at the end of the workshop. A week later, the country head scheduled a meeting of senior managers and workshop participants to discuss the memo: Concrete expressions of commitment should not end with the last day of the education intervention.

Unless senior management continues to play an active role in the implementation process, it is unfair to ask subordinates to make commitments that depend on managerial involvement. Valid tests of senior managers' commitment are their willingness to be subjected to awkward questioning by subordinates, to go on record and stake their prestige and to respond to their subordinates' statement of needs.

Since the McKinsey Corp. study established commitment as a key factor for effective implementation, it has been accepted as conventional wisdom. We agree. However, our case studies suggest that when examining "commitment," one needs to pay particular attention to the perceptions of subordinates as well as to top managers. Only then can concrete mechanisms be developed for communicating senior management commitment to the rest of the organization.

3. Forum. The paradigm of implementation as a process of social change within the organization is the theoretical base that guided our research, as well as shaped the design of the IPS workshop. A key theme in this paradigm is that "resistance" needs to be viewed as a legitimate response from an organizational system that sees the cost of change as being greater than the expected benefits.

The teacher should encourage and respond to the open expression of resistance, not smooth it over or suppress it. The process of "getting it out" is necessary. As one workshop

If you're looking for the best word processing for your DEC PRO, it's here.

Now!

For over five years, DEC™ users at over 1400 sites have been running WORD-11™ on PDP-11™ and VAX™ computers. Because it's the most powerful word processing package for DEC systems. It solves their office automation needs. And it's so thoroughly tested, so well thought-out, and so completely debugged, they would never think of using anything else.

And now WORD-11 is available for DEC Professional 350 users, too. Based on the popular PDP-11 and VAX versions, WORD-11 provides full function word processing. You can interactively create, edit, and print a wide variety of documents ranging from letters and reports to contracts and technical manuals.

In addition, all documents created using WORD-11 on the PRO-350 are compatible with WORD-11 files created on other DEC machines, even though they use different operating systems. And, above all, WORD-11 is the easiest word processing package to learn and use today.

For more information, contact us at DPD. Find out why WORD-11 for DEC PRO-350™ users is the last word in word processing.

IN DEPTH

participant said: "You talked about your problems and frustrations. It was good that people talked; it was perfect. People had to talk, to get it out, or it would have been a mistake."

A key conclusion we drew from case studies in general was that implementation requires an educational forum as the base for information sharing, attitude change (that is, open expression of concerns and needs and mutual understanding), action creation and skill building. It seems clear from normative empirical discussions of user involvement that such forums are an essential component of any strategy for involvement. Furthermore, we believe that involvement, commitment and communication require a forum.

4. **Action.** Many of the participants did not consider Hyperion's earlier IPS training efforts to be relevant to their jobs. While training involved information sharing, it did not lead to the "unfreezing" that has been identified as a first step in effective organizational change. The Lewin-Schein (1969) model of the consulting process has three stages — unfreezing, moving and refreezing — and has been adopted by many MIS researchers.

Information sharing is unlikely in itself to lead to unfreezing. What is required is attitude change. In turn, attitude change may not help the moving stage: Methodologies for planning and explicit commitments are needed.

As previously discussed, the workshop was designed to put management at risk and to challenge it to demonstrate commitment. It was made clear to the country head and to the head of operations that the vague goodwill concepts of commitment and involvement must be translated into action. Participants were told they had the right to expect commitment and involvement from senior management. At the same time, participants were asked to act and to make plans for their own involvement and commitment.

"User," "involvement," "commitment" — words matter. A major concern in the design of the workshop was to define the behaviors that represent these words. Methodologies and planning frameworks were provided to help the participants translate words and attitudes into actions.

Workshop sessions moved toward specific definitions of roles and specific commitments. Most of the participants had never been involved in a major computer project. Nonetheless, they were ready to become "involved," but needed a vocabulary and set of methods to do so. Project phases, milestones and tasks were explained.

As there frequently is a passivity among staff in user departments, they have no idea of what they could or should do. The workshop also focused on roles: The teacher helped participants define who does what,

'While training involved information sharing, it did not lead to the "unfreezing" that has been identified as a first step in effective organizational change. Unfreezing requires attitude change.'

not just what is to be done. Besides clarifying roles, the participants initiated role playing, and there was

substantial active experimentation, particularly through the use of the case study.

5. **Sequence of events.** Obviously, the exact content and sequence of sessions in a workshop will vary depending on the nature of the new system, the technology, the organization and the characteristics of the participants. Bearing this in mind, we believe there are some general rules about sequence of events that should be considered. Kolb and Frohman introduced a model of learning that focuses on four modes: 1) concrete experience, 2) abstract

FOR SERIES/1: NOW MAKE A BETTER IMPRESSION FOR YOUR MONEY.

Attach your Series/1 to Control Data Letter Quality Printers.

Meet the letter quality printer that brings low cost and good-looking output to your Series/1: The Certainty® 410 Printer System from Control Data. It's the receive-only tabletop printer (just 45 pounds) that delivers quality copy at 55 characters per second.

First, this Certainty miniperipheral combines state-of-the-art electronics with a direct drive system that boosts performance and cuts maintenance requirements. Second, you can select the character spacing (10, 12 or 15 per inch), line width (up to 198 characters per line) and line spacing (6 or 8 lines per inch vertically). So you can tailor your printed output to fit your needs neatly and precisely.

Your operator can change daisywheels quickly and

easily; and ribbons can be changed in seconds, just by snapping in a new cartridge. Plus an optional forms tractor gives you bi-directional capability.

So this 410 printer is ready for immediate attachment to your Series/1 with RS232C interface. And it's available right now.

Service isn't a problem, either. More than 5000 Customer Engineers help make sure that Certainty miniperipherals live up to their name.

Make increased effectiveness a Certainty.

No matter how you're using your Series/1, there's a Control Data miniperipheral that'll pay off for you in price and performance.

Call today for more information, toll-free: 800/328-3390.

CD CONTROL DATA

Addressing society's major unmet needs
as profitable business opportunities

IN DEPTH

conceptualization, 3) reflective observation and 4) active experimentation. In retrospect, the IPS workshop was consistent with this model.

Concrete experience. The first session of the IPS work-

shop began with a hands-on exercise in which computer games were used to create "funds" that were transferred to bank accounts using IPS-type technology. This exercise served several

purposes: It broke the ice, reduced fears of the machine, established the potential usefulness of IPS and, above all, made IPS concrete.

Abstract conceptualization. The next few sessions de-

scribed the business goals and context of IPS in terms of abstract conceptualization of the Kolb-Frohman model. The complex analysis of the economic, market, political and organizational consider-

ations that lie behind the decision to introduce an innovation of the scope of IPS may be well understood by senior management and many of the technical staff. However, the complexities are seldom understood by users. For this reason, a workshop session was spent reviewing trends in banking, competitive strategies and business goals that lead to IPS.

The workshop next discussed the likely impacts of IPS on people and jobs. Only after these discussions did the workshop describe the technology behind IPS.

Reflective observation. The following workshop session began with a case study. As previously discussed, the case study was fiction: It was similar to Hyperion's IPS implementation story. In this session, role playing was encouraged. The case was followed by an exercise called "Red Flags/Green Flags." The "flags" were anonymous quotations, many of them made by Megabank employees in Hyperion.

"Red flags" were quotations that signaled implementation problems. For example, "Technologists and business managers — it's a dialogue of the deaf!"

On the other hand, "green flags" were positive implementation signals. For example, "Technologists know the system and business people know the market. We need each other; we teach each other."

The flags were instructive in themselves, providing early warning signals and a basis for diagnosis of the participants' organization. Words are powerful; quotations are concrete. The use of quotations led the participants to work to relate the teacher's material to their own situation and to take positions.

Active experimentation. The participants' positions were shaped, extended, modified, explained and used in the final and longest segment of the workshop — planning agenda. The teacher presented a methodology for planning and a detailed framework and checklist for action. Project phases, time-tables and issues were discussed. In relation to these discussions, participants defined their roles, commitments and actions. The workshop ended with the composition of a memo to senior management in which

We opened this quality disc to show how it stands up and performs. On the surface, flexible discs look alike. But if you inspect them closely, Memorex® sets itself apart.

The cross-linked oxide coating is unique. It results in a coating that will hold a stronger signal for greater recording and playback accuracy. Each disc is burnished to an ultra-smooth surface to reduce head wear and extend media life. A protective hub ring on mini discs eliminates edge damage to the drive access opening resulting in better alignment and dependable performance.

For durability, we constructed a disc jacket from extra-stiff vinyl that loads easier. Glue-sealed to prevent intermittent bonding and stress-notched for added protection, discs withstand the rigors of everyday usage better.

We added a self-cleaning jacket liner that cleans and removes debris from the disc while in use. The result is top performance throughout a long disc life.

You can trust Memorex flexible discs. You know they're reliable because we individually certify every one to be 100% error free.

For any application — 5¼" or 8", one side or two, single or double density — look to Memorex Flexible discs. For more information, call (800) 222-1150; in California call collect (408) 987-1893 or your local distributor today.

Planning and implementing a data network
takes time and skills. You can order
equipment and communication lines
from several vendors, install the
network and test it. *Then* you can manage
performance and availability, manage
change and equipment inventory,
provide security and control access.

Or

You can ask IBM to be your data network.

Now you can use the IBM Information Network to interconnect your computer centers and remote terminals.

When users at multiple sites share on-line information, a company can do a better job in all its operating functions, be more responsive to its customers and improve profits.

But normally there's a price of admission. Networking solutions require new technology, new operating environments and new vendor relationships, plus investments of time and capital.

Instead, let IBM be your data network.

IBM provides "end-to-end" network management services...testing, error control and coordination of network maintenance.

You'll have a network with IBM service and support but without major commitments of people and dollars.

As your network grows, IBM manages that process, including the inventory of lines and equipment, to assure reliable service. IBM can be your single vendor, responsible for coordinating all aspects of the service including common carrier relationships.

In addition to networking, the IBM Information Network offers customers from coast to coast a variety of remote computing services through its large data processing complex in Tampa, Florida. A host of IBM productivity tools can be accessed to extend personal computing capabilities or

to speed software development for your own computer systems. Use these valuable resources when and as you need them.

For more information or to ask IBM to be your data network, call 1 800 IBM-2468, Ext. 90. Or return the coupon.

IN DEPTH

participant questions and suggestions were expressed.

As stated earlier, the content, pace and sequence of events of a workshop depend on many situational factors. But a workshop needs to have a structure that moves participants forward via concrete experience, concepts, reflection and experimentation. In this respect, education is a dynamic process, and the IPS workshop was in itself an implementation effort, beginning with the un-

'The workshop was a jolt to many: It seemed to have facilitated a culture integration through a culture clash. It was also seen as manipulative by some. In one way, education is manipulative, no matter how "participative" its intent.'

freezing stage and ending with the moving stage.

6. Number of participants/het-

erogeneous group. A group of 10 to 15 participants is optimal. This size group is large enough to represent a

diversity of opinions and yet small enough to provide the opportunity for all participants to contribute.

The second issue is the composition of the group. The culture gap between marketing and operations in Hyperion was probably no larger than it is in many other companies. Lack of mutual understanding between end users and systems personnel is extremely common in most organizations. While it is easier to build consensus within a homogeneous group, it is impossible to address actively solutions for a "culture gap" with such a group.

In Hyperion, marketing and operations personnel below the senior-management level had never before taken a course together. One participant stated that the workshop was "the first time marketing and operations had been in the same room together." Therefore, it is not surprising that at times there was substantial conflict among workshop participants from different functional areas. This was intended: The culture gap became a culture clash. The "Green Flags/Red Flags" game and the case study seemed to help people recognize the gap and clash and consequently to try to integrate the two departments.

7. Teacher. The role of the teacher is complex. We define it as that of an adviser combining and moving between the roles of teaching, research and consulting. Teaching is trust; that is, presenting general principles and methods and classroom management. Research is knowledge; that is, presenting data from this and other settings and providing theories and frameworks. Consulting is action; that is, giving advice and expertise.

The adviser needs a range of skills, for implementation education would be ineffective or incomplete if any of the skills were missing:

1. Teacher-researcher, with the consultant role missing: The workshop would be too abstract.

2. Teacher-consultant, with the researcher role missing: There may be a credibility gap as the teacher is seen as "selling" something.

3. Researcher-consultant, with the teacher role missing: Classroom skills are vital; there is a need for formal transfer of information and teaching of methodologies and concepts.

The supply of qualified advisers is a major constraint on effective implementation education, just as the shortage of qualified process consultants, liaison staff and change agents hinders implementation itself.

8. Follow-up. Most follow-up research of corporate education programs tends to focus only on "happiness quotients" (that is, students are asked to rate the quality of the teacher and their own satisfaction with the course). Hyperion's training center staff distributed a teacher evaluation questionnaire to workshop participants. The teacher received an average rating of 8.8 on a

YOUR KEY TO COMMUNICATION NETWORK COMPATIBILITY.

THE CHALLENGE

The challenge for communications network managers today is compatibility—how to integrate a growing number of information processing resources into existing and future networks.

If your organization needs to combine the power and utility of personal computers, minicomputers, office automation equipment or ASCII terminals with your mainframe network, Wall Data can provide you with a cost-effective solution using the DCF Series of communications controllers.

THE WALL DATA SOLUTION

DCF systems act as gateways into IBM SNA, BISYNC and other vendor

network environments. They enable you to flex your network muscle by providing concentration, speed conversion, and protocol conversion to multiple hosts using multiple protocols at the same time.

With the DCF Series, ASCII terminal networks can be used as 327X's with IBM System/370's or as 525X's with System 34/38. And asynchronous hosts can transfer batch datastreams into SNA networks using 3770 SDLC. This means greater productivity from your ASCII terminal network because you do not sacrifice access to your asynchronous host in order to enjoy IBM compatibility—you simply alternate from asynchronous to synchronous host via

a simple-to-use menu interface.

To this sophisticated multi-protocol support, add the following standard features:

- Standard redundant hardware
- Automatic backup without user intervention
- Interactive local configuration
- Remote Software Diagnostics
- Remote Software Downloading
- Asynchronous port selection
- Operator menu interface

Together these features add up to the most flexible protocol gateway available to tie your multi-vendor systems into a cohesive, cost-effective network.

Whether you just want to complement your IBM network with lower-cost ASCII devices, or to merge asynchronous and synchronous hosts into a more manageable network resource, call Wall Data today—THE DATA COMMUNICATIONS FACILITATOR.

The Data Communications Facilitator

A computer upgrade with Wang won't stunt your company's growth.

The best reason for choosing a Wang VS computer today may be tomorrow. Because unlike comparable IBM systems, the Wang VS line is a computer family with a smooth, proven and continuous growth path.

Consider. All Wang VS computers use a single operating system and single system software. Once your people are familiar with one Wang VS, they're already familiar with the next.

On the other hand, the IBM 34/36, 38 and 4300 all use different operating systems, different source codes and even different software. Upgrading from one to another is almost like starting over again with a whole new system.

A typical conversion from the IBM 34/36 to a Wang VS computer takes about two months. From then on, no other conversions are necessary.

Converting from the IBM 34/36 to the IBM 38 is a long and tedious process. And you face an even more difficult task going to an IBM 4300. That's time and money that a growing company just can't afford.

If you want to spend more time doing business, and less time getting ready to do business, choose the Wang VS computer line. It won't stunt your company's growth no matter how fast you grow.

For a demonstration of Wang VS computers, call 1-800-225-9264. Or send this coupon to: Wang Laboratories, Inc., Business Executive Center, One Industrial Avenue, Lowell, MA 01851.

IN DEPTH

nine-point scale, ranked on nine variables.

This information, however, did not tell us if the behavioral objectives were met, if the curriculum should be modified or if the course should be offered to others. High ratings may have little or nothing to do with learning. In assessing the impact of the IPS workshop, we were more interested in the satisfactory actions it stimulated.

The issue of follow-up is linked to

that of behavioral objectives. It is almost meaningless to evaluate a program for which clear operational goals are not defined *before* implementation. After the IPS workshop, we interviewed all the participants to assess the immediate impact of the workshop in relation to the stated objectives.

Close the culture gap. The first objective was to close the culture gap. The workshop was a jolt to many: It seemed to have facilitated a culture

integration through a culture clash. It was also seen as manipulative by some. In one way, education is manipulative, no matter how "participative" its intent. People in the marketing department spoke of a new feeling of commitment to IPS after the workshop. The following comments were typical:

"Don't get me wrong, the course was very good, but it was brainwashing!"

"This workshop is called 'Prepar-

ing for IPS.' You should change the name to 'Committing to IPS!'"

"Before this workshop, I was told I would be a part of IPS. After the workshop, I feel a part of it."

Create action. The second objective was to create action. Since the main goal for the workshop was to influence action, its success mainly depended on follow-up activities directly initiated as a result. Recommended actions by participants included: 1) sharing information and experiences with colleagues; 2) pushing the workshop down to junior-level and up to senior-level employees; and 3) meeting with senior management.

Over the next month, several actions were initiated. Workshop participants met with the country head. The meeting proved fruitful, both as another forum for operations and marketing to share information and ideas and as a vehicle for new commitment for further education.

Regarding further education, an operations manager was assigned to be responsible for IPS training in Hyperion. However, when he was interviewed, the manager admitted he felt uncomfortable with his new role and said: "The problem is *how* to educate — with terminals, with conferences... with what?"

This remark is disturbing. The workshop was a force for unfreezing: It broke open the status quo and stimulated an awareness of the need for a wider, deeper education effort at all levels. The workshop also led to a significant increase in the resources committed to and the priority placed on education as part of the IPS implementation process in Hyperion.

However, without a plan for education strategies and methodologies, increased resources are unlikely to yield results. The long-term impact of the workshop and of the increased resources allocated for education can only be guessed at. The future will largely depend on Hyperion's ability to determine how to educate.

The principles described here may be valuable for designing and delivering a single education intervention to address issues inherent in implementing computer technology. But regardless of the success of one intervention, without a long-term, comprehensive education strategy, the workshop simply could have been lots of "sound and fury signifying nothing."

About the Authors

Gloria Bronsema is an independent management consultant based in Boston. She is a consultant to multinational corporations on the organizational impacts of the implementation of computer technologies.

Peter Keen is chairman of Micro Mainframe, Inc. in Cambridge, Mass. His current research interests lie in the areas of decision support systems, telecommunications and business policy and strategic computing education.

PROJECT:

DATA BASE MANAGEMENT SYSTEMS

BUILDING THE ULTIMATE DP TEAM

For those who seek an environment that recently saw Hughes-built satellites carried into space by the Shuttle and will send the Galileo Probe to explore the atmosphere of Jupiter...

For those who seek challenge and opportunity... Look to Hughes in Southern California.

Information Modeling, Prototype Development, ADISO... all hot topics on the data base seminar and conference circuit. But they are working realities at Hughes Space & Communications Group.

With Information Modeling, for instance, we use a specific Entity-Relationship Attribute modeling technique (IDEF) to represent the data used by our world-renowned engineering community. We meet regularly with their very active review committee to hammer out a formally approved logical model from which we design a conceptual schema.

The Information Model and the conceptual schema are entered into the Integrated Data Dictionary and used as the foundation to develop a prototype data base. Logical. Systematic. Resulting in a validated

data base design to support both short and long-term user requirements.

If you can identify with this approach and you know IDMS, we'd like to hear from you. Unique opportunities exist for Programmers, Programmer Analysts, Systems Analysts, DB Analysts, DB Administrators, and Data Communications Administrators.

SPACE & COMMUNICATIONS GROUP

CSO to Emerge From AT&T Divestiture

By Katherine Hafner
CW Staff

LIVINGSTON, N.J. — Perhaps the most prominent new acronym to emerge from the Jan. 1 AT&T breakup will be CSO, which stands for Central Services Organization.

Simply put, the CSO is the local companies' version of Bell Laboratories. Recognizing that the optimal setup would not be to disperse such an organization throughout the nation, but to maintain a central facility in New Jersey, the local companies each own an equal portion of the CSO, and the board of directors is made up of a representative from each region.

AT&T's goal is to have the CSO in full swing by Oct. 1 in preparation for the final split three months later.

Staffed mainly by former Bell Labs employees, the CSO is smaller and a bit different in its focus than its progenitor. While the main thrust of Bell Labs is toward research and development, proportionately less of the CSO staff will conduct pure research and must thus be more selective in its research endeavors.

"The CSO is really a continuation of the kind of work Bell Labs was doing for AT&T and the telephone companies in the

past," explained Larry Bernstein, assistant vice-president for information systems development. "But there are certain areas of work we won't be involved in, such as developing integrated circuits or hardware development for switching systems."

CSO Will Have Seven Sister Firms For Cellular Radio

The Central Services Organization, the offshoot of Bell Laboratories to go into operation when AT&T's divestiture becomes official Jan. 1, will have seven sister organizations devoted to cellular mobile radio.

AT&T's current cellular operation is called Advanced Mobile Phone Service, Inc. (Amps), a separate AT&T subsidiary. As of Jan. 1, Amps will be broken up into seven separate regions, each of which will act as a subsidiary of the corresponding regional holding company, according to Christine Davies, a spokes-

(Continued on Page 66)

According to Bernstein, another fundamental difference between Bell Labs and the CSO is that while Bell Labs routinely endorsed Western Electric's equipment, the CSO will not endorse any one equipment manufacturer.

"We'll analyze what's available, give suggestions as to performance and analyze reliability," Bernstein said, "but we won't make any recommendations. It's strictly a technical report."

The largest department at the CSO is the technical services department for developing generic plans and software to help the regions design and manage their communications networks, a CSO spokesman said.

(Continued on Page 66)

Mohawk Offers SNA Capability For Series 21 Line

PARSIPPANY, N.J. — Mohawk Data Sciences Corp. has announced the availability of IBM's Systems Network Architecture (SNA) communications capability on the vendor's Series 21 family of distributed processing systems.

Designed to encompass both batch and interactive communications, Mohawk Data's Intelligent 3270 emulator reportedly enables Series 21 users to satisfy communications requirements within a multistation network environment.

The product allows the Series 21 to attach to an SNA network and permits the Series 21 to appear as an SNA remote batch terminal, enabling it to communicate with and function as a remote extension of a central site batch teleprocessing program or subsystem within an SNA environment.

Pricing begins at \$1,500 per system from the vendor at Seven Century Drive, Parsippany, N.J. 07054.

DCA's INA, Concentrator, Mux Get IBM-Compatible Products

NORCROSS, Ga. — Digital Communications Associates, Inc. (DCA) has announced IBM-compatible products for its Integrated Network Architecture (INA), a network control concentrator and a bit-synchronous time-division multiplexer.

The Binary Synchronous Communications (BSC) Transport System (INA/BTS) is said to transport data formatted under the IBM 3270 BSC protocol through a DCA INA network.

The capabilities of INA/BTS include host selection in an IBM BSC environment, transmission of both 3270 synchronous and asynchronous data through the same telephone line, elimination of the overhead of poll/response through the network and efficient satellite links, a vendor spokesman said.

INA/BTS is available for a starting price of \$995.

The Asynchronous Terminal Controller (INA/ATC) allows asynchronous ASCII terminals — either directly connected or connected via dial-up to the DCA network — to communicate with an IBM or IBM-compatible computer using 3270 BSC or Systems Network Architecture protocols.

Prices for the INA/ATC start at \$8,950.

The company has also announced its Network Control Concentrator (NCC) for its INA series of networks. Working in conjunction with the DCA Series/300 network processors, the NCC collects and integrates exception reports from network processors throughout the entire network and allows the operator to direct commands to any processor and receive replies at the terminal, according to a vendor spokesman.

The NCC is available for \$4,995.

Also introduced was Megalink, a bit-synchronous time-division multiplexer said to provide voice and data transmission in addition to network management and diagnostic capabilities.

Available in tabletop or rack-mounted enclosures, Megalink comprises its own

stand-alone network or integrates into any DCA network. Megalink's features also include: trunk speeds from 50 bit/sec to 2.048M bit/sec, support of 128 ports up to 256K bit/sec and integrated voice and data support with four ports of digitized voice per interface card.

Megalink is available for \$3,800.

More information is available from DCA, located at 303 Technology Park, Norcross, Ga. 30092.

Control Concepts Announces 3274 Protocol Controller Unit

MANASSAS, Va. — Control Concepts Corp. has announced the 3274 Protocol Controller, an addition to its line of IBM-compatible controllers and terminals.

According to the vendor, the 3274 functions like an IBM 3274 controller for up to 32 asynchronous ASCII terminals and printers. It is available in both IBM Binary Synchronous Communication and Systems Network Architecture/Synchronous Data Link Controller models and can be configured with four to 32 ports. Setup is via a

series of menu panels.

The 3274 can support over 100 models of ASCII terminals, including the IBM Personal Computer. Additional support of personal computers, color terminals and keyboard send/receive printers, password protection and graphics can also be configured, according to a spokesman for the vendor.

Starting price for this product is \$4,950 from Control Concepts, 12004-B Balls Ford Road, Manassas, Va. 22110.

Display Station Unwrapped

SANTA CLARA, Calif. — Datastream Communications, Inc. has announced a multifunction display station said to be the first in a series of displays designed for use with its IBM 3270 Binary Synchronous Communications and Systems Network Architecture remote cluster controllers.

The 178 Display Station reportedly is compatible with IBM's 3178 and Digital Equipment Corp.'s VT52 terminals and can be used for minicomputer or time-sharing applications.

Its keyboard includes all features of the IBM 3278 keyboard, plus some operator productivity features found only on the

IBM 3290 plasma display keyboard, a vendor spokesman said.

Features reportedly include a cost-effective, flexible alternative to 3178 terminals, access to IBM and minicomputer hosts from a single display station, networking flexibility for printers, enhanced IBM 3290-style keyboard functions, dynamic reconfiguration of 3270 keyboard layouts on an applications basis, ergonomic design and compatibility with any serial RS-232C ASCII printer.

The 178 Display Station costs \$975 from the vendor at 2520 Mission College Blvd., Santa Clara, Calif. 95050.

Bell Labs' Offshoot to Handle Cellular Radio

(Continued from Page 65)
woman for Bell Atlantic, one of the seven new regions.

The cellular solution promises to solve the problem of overcrowding of radio channels for mobile telephones. Unlike traditional mobile systems, which work through high-powered central base stations, cellular radio works through a series of different cells, each containing its own low-powered

transmitter.

Since cellular communications allows for frequency reuse, there is little restriction on the number of mobile radios that can be operating at a time.

The extent to which each regional company delves into cellular services depends on its own level of interest, according to Davies. The individual regions will also be responsible for pre-

paring applications to the Federal Communications Commission in order to obtain licenses.

In Chicago, for instance, the American Information Technology (Ameritech) region in the Midwest will be the first in the nation to provide cellular services to its customers this November. The Chicago service will be called Ameritech Mobile Communications, Inc., and

the equipment for the system will be supplied by OKI Advanced Communications of Hackensack, N.J., and Motorola, Inc.

The Pacific Telesis Group (Pactel) covering California and Nevada will operate a cellular unit called Pactel Mobile Access.

Bell Atlantic Mobile Systems is the name for the Bell cellular subsidiary in the Atlantic states, and Southwest-

ern Bell Mobile Systems, Inc. is the name for Southwestern Bell's subsidiary.

AT&T Split To Form Arm For Research

(Continued from Page 65)

Five subsets of the technical services department are: the technology systems area, to provide technical and operations systems support for the networks; the applied research area, to keep the regions up-to-date on technology; the information systems development area, to design and develop operations support systems; the network planning area, to provide planning support for network and operations systems architecture; and applied research, to conduct research in science, math and computer systems.

For day-to-day operations support, the engineering and operations area will provide support on switching, inter-office facilities, distribution services, operator services and special services.

In addition to technical planning and basic research, the CSO will provide the operating companies with many of the services formerly offered by Western Electric and AT&T's general departments.

On the nontechnical side is CSO's administrative services, representing a distinct minority (7,200 out of 8,800 CSO employees are in technical areas). This division will preside over access tariffs, personnel, finance and industry relations.

Whether the CSO will be able to follow in the successful footsteps of Bell Labs, out of which have come 20,000 patents and four Nobel Prizes, remains a question that only time can answer.

Switch Out For RS-232C

WATERTOWN, Mass. — Digital Laboratories, Inc. has introduced an RS-232C A-B-C-D switch said to operate under complete software control or with manual override.

The Digital ESP-1 Port Expander reportedly creates four RS-232C serial ports from one and allows switching to different printers and other peripheral devices. The Digital ESP-1 reportedly switches four lines per port.

Priced at \$395, it is available from the vendor at 600 Pleasant St., Watertown, Mass. 02172.

Power Problem #3

HOW DO YOU STOP POWER LINE NOISE FROM RATTLING YOUR COMPUTER?

Answer: With a Topaz line noise suppressing Ultra-Isolator®.

Power line noise is a major source of computer problems. It frequently causes untraceable data entry, program errors, memory losses, equipment malfunction — even system damage.

Topaz Ultra-Isolators completely eliminate these types of problems. Innovative triple shielding is combined with advanced circuitry to make Topaz Ultra-Isolators the most effective power line noise suppressors available anywhere. And they're guaranteed to do the job — or your money back.

Topaz Ultra-Isolators are offered in a wide variety of models for use with all

types of computers, from micros to mainframes. Additional features include UL listing, attractive design, cool and quiet operation and money-saving 95% efficiency. Selected models also offer plug-compatible output receptacle panels for convenient power distribution.

Don't let power line noise rattle your computer. Order a Topaz Ultra-Isolator today. All models are in stock, ready for immediate shipment.

For more information, return this ad with your name and address, mark the reader service card, or call us:

TOPAZ
SOLUTIONS TO POWER PROBLEMS™

Dual Data Link Model Out For Timeplex Microplexer

WOODCLIFF LAKE, N.J. — Timeplex, Inc. has announced a dual data link model of the Microplexer X.25 Packet Assembler/Disassembler (MX.25 PAD) that reportedly has been certified for use on three major U.S. public data networks.

The MX.25 PAD supports two separate composite links running simultaneously at speeds up to 9,600 bit/sec each; if one link fails, the other reportedly can carry all data traffic.

The vendor said the device has been certified on Tymnet, Inc.'s Tymnet, GTE Telenet Communication Corp.'s Telenet and Uninet, Inc.'s Uninet networks and has also demonstrated compatibility with the Datapac network operated in Canada by the Trans Canada Telephone System.

Prices for a complete MX.25 PAD start at \$1,750 from Timeplex, 400 Chestnut Ridge Road, Woodcliff Lake, N.J. 07675.

Harris Enhances PBX System

NOVATO, Calif. — Harris Corp. has added automatic wake up, room-status display and an audible reminder that a phone has been placed on call-forwarding to the Harris 110 Private Branch Exchange (PBX) hotel/motel and business systems.

Attendants and guests can "program" the Harris 110 to place a wake-up or appointment reminder call, while the room-status feature allows each room to be assigned a code reflecting its status — reserved, occupied or in need of cleaning, for example, the vendor said.

The call-forwarding tone helps to ensure that users do not continue to redirect calls after they have returned to their rooms.

The Harris 110 PBX accommodates up to 111 lines and 20 trunks.

The PBX system is available in two models. The price for Model 674 is \$7,500. Model 676 costs \$9,000 and includes accounting codes capability and station message detailed recording capability. More information is available from Harris, Digital Telephone Systems Division, Novato, Calif. 94948.

LIMITED
TIME OFFER!

GET THE SINGLE MOST
IMPORTANT PERIPHERAL FOR YOUR
IBM PC AND COMPATIBLES
AND SAVE 47%!

PC WORLD

PC WORLD IS MUCH MORE THAN A MAGAZINE.

PC World is the single most important peripheral for your IBM Personal Computer and Compatibles.

The world of the personal computer is expanding every day. Hardware and software makers are working "around the clock," developing new products to expand the capabilities of your PC. Each month PC World's own experts report to you what's new in this growing world.

At last, you have an independent and authoritative source of information to help you get more of everything you need and want from your PC.

What's more, PC World is written in a fresh and lively style—with a minimum of technical jargon. PC World gives you what you need most—straightforward information you can rely on—before you spend your money on other necessary peripherals.

If you're not reading PC World, you're not getting the most out of your personal computer.

THE PERSONAL COMPUTER WORLD OF TOMORROW IS BEING CHARTED IN THE PAGES OF PC WORLD TODAY.

PC World will keep you up to date on the state of the art in areas such as local networks, telecommunications, and data bases. We'll bring you impartial, reliable reports on the fast-growing body of second generation software being developed especially for the IBM PC and Compatibles—all with a level of editorial excellence you simply won't find in any other magazine.

SPECIAL ISSUES YOU WON'T WANT TO MISS: THE PC WORLD HARDWARE AND SOFTWARE REVIEWS.

Take advantage of PC World's limited time offer and you'll receive two special

issues—the PC World HARDWARE and SOFTWARE REVIEWS. These issues will include everything you need to make purchasing decisions that are right for you: specs, sources of supply, prices, performance data, comparisons, and much, much more.

This is a limited-time offer. Subscribe immediately before December 31, 1983, to get 12 regular issues of PC World plus the two special issues for a total of 14 issues—all for only \$24. Act now and you'll save 47% off the regular newsstand price.

Mail the coupon below today OR call TOLL-FREE: 800-247-5420 (From Iowa: 800-532-1272).

EXPAND YOUR WORLD!

PC World will help you expand your own world as we explore the vast potential of the personal computer.

Together—PC World and its readers—will advance the state of the art by sharing their discoveries and experiences.

To expand your world, order your subscription to PC World now during this special offer.

PC WORLD'S NO-RISK GUARANTEE:

We're absolutely certain that once you've come to rely on PC World you won't want to miss a single issue. That's why we can make this no-risk guarantee: If, within the first 90 days of beginning your subscription to PC World, you are not completely satisfied, just write us of your intention to cancel and we'll REFUND 100% of your subscription price.

WITH NEW ADVANCEMENTS EVERY DAY, YOU NEED PC WORLD EVERY MONTH.

Mail the coupon below today OR call TOLL-FREE: 800-247-5420 (From Iowa: 800-532-1272).

Three Designed for Networking NEC America Introduces Series of Modems

MELVILLE, N.Y. — NEC America, Inc. has announced a series of modems, including three modems which are said to be designed for

networking configurations.

The SPN9600/4800/2400-U series modems are designed for point-to-point, multipoint and tandem data

transmission over leased lines with data speeds of 9,600, 4,800 and 2,400 bit/sec. The series also features fast polling capability, diagnostic control and monitoring systems. Prices range from \$2,000 to \$7,000 per unit.

The SP14400-U is a high-speed modem designed to provide a 14.4K bit/sec data rate. It also includes local and remote addressable loopback, bit error rate and polling tests using a built-in test pattern generator and front-panel error display. It is available for \$7,800, according to a vendor spokesman.

The DSP224AR is a 2,400 bit/sec full-duplex modem designed for operation on two wire-switched net-

work lines. Diagnostics include local and remote loopbacks, bit error test using a built-in test pattern generator and front-panel indicator. It is available for \$1,195.

The DSP208A/B is a 4,800 bit/sec modem compatible with the Bell 208A/B modem. It reportedly can be used over the dial-up network and two-wire/four-wire private line circuits. It is available for \$1,750 per unit.

The SP0801-U is a mounting rack designed for the DSP series and lists for \$800. More information on these products is available from NEC America, located at 532 Broad Hollow Road, Melville, N.Y. 11747.

Bridge Receives OK to Work Xerox Gateway on GTE Nets

CUPERTINO, Calif. — Bridge Communications, Inc. has announced that it has received approval from GTE Telenet Communications Corp. to work its Xerox Corp. Ethernet local-area network gateway over GTE's data networks.

Bridge said its gateway, called the GS/1, would now be able to connect Xerox networks to host computers via GTE's packet switching and by means of the CCITT X.25 protocol.

Consisting of modular hardware and software divided into three logical modules, the gateway acts as a

communications link between an Ethernet and an X.25 network. Bridge said its gateway can link up with as many as 48 Ethernets.

Price is \$13,500 with a \$100 software charge from Bridge at 10440 Bubb Road, Cupertino, Calif. 95014.

Racal-Milgo Adds Encryptor To Product Line

MIAMI — Racal-Milgo, Inc. has added a wideband-circuit data encryptor to its family of products designed to secure the transmission of computer information.

The new device, dubbed the Data-encryptor III, is said to prevent unauthorized access to information over point-to-point wideband circuits at rates of up to 112K bit/sec.

Equipped with V.35 and RS-232 interfaces, the encryptor uses the DES algorithm in the single-bit cipher feedback mode, which is said to permit protocol transparency.

Its price is \$4,995. The product will first be available in November from Racal-Milgo at 8600 N.W. 41st St., Miami, Fla. 33166.

Wyse Unveils Two Terminals, One for X3.64

SAN JOSE, Calif. — Wyse Technology, Inc. has unveiled two 14-in. display terminals, one of them conforming to a subset of the newly adopted Ansi X3.64 standard.

Called the Models WY-50 and WY-75, the terminals have a non-glare green phosphor display and offer between 80-col. and 132-col. widths, a vendor spokesman said.

The 101-key detached keyboard is fitted with 16 programmable function keys and 32 control codes. Both terminals reportedly incorporate nonvolatile memory, which allows for the elimination of dual in-line package switches and enables the terminals' parameters to be entered from the keyboard, according to the vendor spokesman.

The terminals, priced at \$695 and \$795, are available this month from Wyse at 3040 N. 1st St., San Jose, Calif. 95134.

3270 Networking: No More No Man's LAN.

Imagine. 3270 Processing. IBM-Compatible Personal Computing. Local Area Networking. And SNA Compatibility. In One System.

Imagine a system that successfully settles the before now uncharted territory of 3270 local networking—that "no man's LAN" of unlinked and, thus, unrealized potential.

Imagine a system that delivers the power of 3270 processing, and the flexibility to build two local area networks from a single controller. Imagine being able to attach up to 120 devices to that controller. Or attaching

Loose Approach to DDP Avoids Some Problems

By Stephen Moore

CW International News Network

MELBOURNE, Australia — While offering many advantages, distributed computer systems pose several problems, such as costliness and lack of security. The solution to these problems might well be found in the "loosely" coupled approach to the multiprocessor as opposed to the "tightly" coupled alternative.

By definition, a distributed microcomputer or minicomputer system is a system composed of two or more micros or minis connected through shared memory or via high- or low-speed data links and running under the same operating system. Micro or minicomputer systems that use the shared memory interconnect ap-

proach have been coined as "tightly coupled systems."

Tightly coupled systems are systems in which all processors in the system can execute code out of the shared memory; I/O and all other system resources may be shared by the processors as well. Also, the interprocessor communications latency is low due to potential access time being only limited by the actual memory access time.

This type of system, however, poses many serious drawbacks for some applications. In addition to the expense of a shared memory and the tightly coupled system's relatively few security features, the operating system tends to become very hardware specific.

Alternately, loosely coupled systems do not share a common primary memory, and they offer the user a less confining distributed system and only a few shortcomings.

At the hardware level, there must be an explicit communications interface between the micros or minis. A communications interface implies that there is a higher latency of communications between processors than would be the case if they directly shared primary memory.

Changes in architecture are usually not easily made in tightly coupled systems or in multiprocessors. In contrast, a loosely coupled multiprocessor system allows for any processor to be changed without affecting the rest of the system. As long as the

communications protocol is maintained, knowledge of attached processors is not required.

Three widely used interconnect methods for loosely coupled processors are the time-shared/common bus, mailbox/shared memory and global multiple-access bus.

With microcomputer systems, the global multiple-access bus is gaining popularity. Such systems include Datapoint Corp.'s Arcnet (token-passing system), Intertec Data Systems Corp.'s Compustar (parallel access bus) and Xerox Corp.'s Ethernet (carrier-sense multiple access with collision detection [CSMA/CD]). Of the three, the CSMA/CD system offers the best proposition when speed and bus utilization are considered.

Mailbox memory systems have been appearing on some distributed microcomputer systems, but they do suffer some drawbacks with microcomputer hardware.

If the information passed to an attached processor must go either via an I/O port or through a common area of memory, long delays may be experienced if other processors are transferring at the same time.

The Dewhurst Corp. of Melbourne, Australia, has manufactured a networked multiprocessor machine that is said to address many of these problems. The company's objective was to create a loosely coupled system that offered expandability, maximum performance and, most importantly, the capability of using existing software.

The objective of using existing software was achieved with two products:

- A Musys Corp. network operating system called Turbodos, which runs Digital Research, Inc.'s CP/M software and the Micro Data Base Systems' MDBS III multiuser data base management system for sophisticated systems builders.

- The use of Zilog, Inc. Z80 microprocessors to give the widest microcomputer software base.

With Z80s acting as slave processors in the distributed system, compatibility with CP/M was maintained and the highest speed Z80 components were used. Also, a local floating point processor was placed on the card to provide a good scientific computing capability, according to the designer of the system, Mike Dewhurst.

Dewhurst said the slave processors operate with semicustom devices that include a high-speed direct memory access channel to move data to or from the slave at speeds 10 times in excess of those achievable by programmed I/O techniques.

Since two slaves can simultaneously perform this transfer with no contention, a 60-fold improvement in the data transfer rate can be achieved, he said. This type of communications system yields results comparable to those from a shared-memory system without the hardware and software complications.

Moore is an editor specializing in office automation technology at Australasian Computerworld. This article originally appeared in Computerworld's Australian sister publication and appears here as part of the CW International News Network.

four distinct controllers—and multiple coaxial links of up to 10,000 feet each—to any of those LANs.

Imagine the economies of a system that handles that networking with standard 3270 coax. That requires no commitment to special architectures or non-standard LAN technologies. And that, thanks to a multi-drop, station-to-station design, can eliminate thousands of feet of new coax.

Of course, such a system would have SNA compatibility. But it would also have a set of capabilities to dramatically increase efficiency and throughput, while reducing hardware configuration and support cost in any environment. Capabilities like multi-host and multi-personality support, application and address switching, session swapping and system printing.

This system would have an IBM-compatible personal computing option "built into" the network, not "bolted on" at the workstation—an option that would let you assign true 16-bit computing power, maintain overall MIS control, and share expensive resources, like hard disks and letter-quality printers.

Such a system would offer a full range of printers, including matrix, correspondence, and high-volume, high-speed models—all designed for maximum efficiency

*LANmark is a trademark of The Braegen Corporation.

and convenience. And it would boast an intelligent display station that displays more than just data, but a mastery of ergonomic and aesthetic design as well. With multi-screen formats, anti-glare screen, low-profile keyboard, and a tilt-and-swivel pedestal that gives the station the smallest footprint in the industry.

Imagine 3270 processing, IBM-compatible personal computing. Versatile, economical, powerful local area networking. In one system.

The Executive Microcomputer Conference and Exposition is coming to The Long Beach Convention Center on October 5-7.

The Conference Program

The computer show designed with you in mind! At the EMCE Conference Program you can learn in three days what could take three months.

Whether you're a DP/MIS Manager, a novice business computer user, vendor or entrepreneur, the EMCE Conference program will provide you with the information you need to make the most prudent and cost-effective software and hardware decisions for your needs.

The EMCE Conference Agenda, October 5-7 1983

THURSDAY, OCTOBER 6, 1983

7:45 - 8:45 a.m.	EYE OPENER: The Personal Computer in Communications Dr. Larry Magid, Executive Vice President, Know How, Inc.
9:00 - 10:00 a.m.	KEYNOTE: The Micro/PC Industry: IBM Domination & Future Directions Adam Osborne, Chairman of the Board, Osborne Computer Corp.
10:00 - 11:00 a.m.	The Executive/Professional Workstation John Crudele, Sr. Manager, Management Information Consulting, Arthur Andersen & Co. Software for Engineering Users Aki Runchal, President, Analytic and Computational Research, Inc. Channels of Distribution for Microcomputers Jim Finke, President, Internetwork, Inc.
2:00 - 3:00 p.m.	Spreadsheet Applications Laurence Press, President, Small Systems Group The Micro-Mainframe Connection Dick Andersen, Director, AM/MS, Charles Bornheim, Principal, AM/MS; Marc Cummings, Senior Consultant, Mini/Micro Technology, Bank of America. Packaging & Documenting Software Howard Zack, Marketing Communications Manager, VisiCorp
3:10 - 4:10 p.m.	The Future of Business Graphics Dr. Irwin Jarrett, Chairman and Founder, Fingraph Corp. The Engineering/Technical Workstation Glenn Stewart, Industry Marketing Manager, WICAT Systems The Personal Computer After Market To be announced
4:20 - 5:30 p.m.	Micros and the Changing Role of MIS Dr. Michael Hammer, President, Hammer & Co., Inc.

FRIDAY, OCTOBER 7, 1983

7:45 - 8:45 a.m.	EYE OPENER: Information Utilities for Personal Computing Fran Spigai, President, Data Base Services.
9:00 - 10:00 a.m.	KEYNOTE: The Fifth Generation Workstation & Artificial Intelligence Pamela McCorduck, co-author, "The Fifth Generation: Artificial Intelligence and Japan's Computer Challenge"
10:00 - 11:00 a.m.	Word Processing for Micros: The Next Step John Murphy, Vice President, Advanced Office Concepts Corp. Networking Microcomputers in the Corporate Environment Arnold M. Roberts, Consultant, ADC Associates Delivering Good Training and Support to the Corporate User Karen Orton, Vice President, National Training Systems
2:00 - 3:00 p.m.	The Information Resource Center Tom Kosnik, Researcher, Stanford Business School, William G. Haven, Independent Computer Consultant Portable Computers for Professionals Doug Mosher, Division Manager, Sybex, Inc. How to Raise Venture Capital Moderator: Melody Johnson, Securities Analyst, Cable, Howse & Ragen Panelists: Tom Cable, Partner, Cable, Howse & Cozadd
3:10 - 4:10 p.m.	Defining Integrated Software Moderator: Gordon Eubanks, Vice President, Commercial Systems Division, Digital Research, Inc. Panelists: Fred Gibbons, President, Software Publishing; Kurt Lynn, Product Marketing Manager, VisiCorp; Jeanne Mowlds, Quarterdeck Office Systems DBMS on Microcomputers Scott Kuklin, Executive Vice President, Helix Corp. Selling to the Corporate Account: Problems & Pitfalls William H. Luden, President, ComputerEase
4:20 - 5:30 p.m.	The Role of Microcomputers in Business Moderator: Edwin H. Shepard, Product Manager, The Software Products Division, Alexander Grant & Co. Panelists: Richard L. Willmarth, Manager, Office Systems, Storage Technology Corporation; Marc Cummings, Senior Consultant, Mini/Micro Technology, Bank of America.

Special No-Wait tours of the "Spruce Goose" — FREE

EMCE has arranged for after-hours tours of the world's largest airplane, Howard Hughes' famed "Spruce Goose." Tours will be held Wednesday and Thursday, October 5 & 6 from 6:00 - 8:00 PM. You can pick up your free ticket from any exhibitor on the show floor.

Win a Personal Computer

Here's your chance to win the MORROW MICRO DECISION (MD3), the complete desktop system for the small businessman and professional. Just go to the InfoWorld exhibit booth and fill out a ticket. You may be the lucky winner.

PLUS you get the the EMCE Exhibition

An exhibit floor full of products and services for serious micro users. And exhibitors who are anxious to help you find the answers to your business problems.

EMCE Long Beach is sponsored by CW Communications/Inc., publishers of *Computerworld*, *InfoWorld*, *ISO WORLD* and *PC World* and is the largest and most respected publisher of computer-related newspapers and magazines in the world.

EMCETM

Executive Microcomputer Conference & Exposition

FOUR "IN DEPTH" TUTORIALS

Wednesday, October 5 from 9:00 a.m. - 5:30 p.m.

EMCE's "In Depth" Tutorials are all day seminars for managers who need a comprehensive understanding of one of the topics outlined below. All tutorials include two coffee breaks and a complete course notebook with reference materials. The tutorials will be held at the R.M.S. Queen Mary, Long Beach, CA.

How to Select a Business/Personal Computer

- How to Select the Features You Need
- Determining What Size Computer You Really Need
- What to Look For — and Look Out For — In Your Hardware and Software
- How to Determine What To Spend
- How to Select The Right Software Package For You
- How to Simply Define Your Computer System Requirements
- How to Minimize Costly Professional Help
- How to Select the Best System and Suppliers

Course Instructor: Arnold M. Roberts, president of ADC Associates brings to the tutorial extensive experience in seminar leadership having presented tutorials to managers across the country in the areas of data base management, networking and other application specific areas. Mr. Roberts has over twelve years experience in the field of Business Data Processing, with a strong background in systems analysis and design, technical support, in-house training as well as assisting corporations in the selection and integration of personal computers.

Microcomputers and Local Networks

- Overview of Networking and Definitions
- Hardware Issues
- Interconnection Technologies
- Microcomputers and Components
- Software Issues including Operating Systems
- Centralization vs. Decentralization
- Equipment and Systems: A look at Network Models
- Technology Trends and Future Directions

Course Instructor: J. Scott Haugdahl is a systems specialist at Architecture Technology Corporation, Minneapolis, Minnesota, a consulting firm specializing in computer architecture, including local networks and office systems. His work has included simulation and performance analysis of multi-processor computer systems, design and implementation of servers for local networks, and analysis of the latest developments and product offerings in the local computer network market. Mr. Haugdahl received his B.S.C.S. from the University of Minnesota Institute of Technology in 1980. He is a member of both the IEEE and ACM.

UNIX Tutorial for Managers

- The History of Unix
- UNIX — The Product
- Dynamics of the UNIX Marketplace
- Overview of Available UNIX Products
- Comparison of Hardware Systems
- A look at Application Software
- The Capabilities and Limitations of UNIX

Course Instructor: Jean Yates, president and associates of Yates Ventures specialize in researching UNIX systems, applications and the growing UNIX marketplace. Yates Ventures has been involved in extensive laboratory testing of UNIX related products and has been credited with producing 5 books on the subject. Well-known lecturer and industry consultant, Ms. Yates brings to the seminar both hands-on and technical experience of UNIX and UNIX related products as well as extensive user research.

Business Graphics for Managers

- Assessing Your Hardware Requirements Including Printers, Plotters and CRT's
- Assessing Your Software Requirements Including Operating Systems and Interfaces
- Evaluating Current Business Graphics Software
- Developing and Using Business Graphics Software
- Producing Pie and Bar Charts
- Understanding Program Compatibility
- Creating Presentations with Graphic "Slide Shows"

Course Instructor: James Morrison, independent consultant and educator, has trained many people in the area of microcomputers. As a contributing editor to LIST software publication and newsletter, and an evaluation expert for FIRST SOFTWARE, Mr. Morrison is a true professional in his field. He has published a number of books in the area of process which include subjects such as micro data communications, business software applications and "how to maintain" your microcomputer.

The Executive Microcomputer Workshop

Thursday and Friday, October 6 and 7.

An intensive two-day session for the busy executive or professional who needs to learn the basics of using a personal computer in the least possible amount of time. You'll learn how to use the IBM PC and have concrete experience with Lotus' 1-2-3 integrated software package.

The workshop will be given in conjunction with National Training Systems (NTS), a leader in providing microcomputer training products and services to large corporations.

The Executive Microcomputer Workshop will be held at the Long Beach Convention Center. Enrollment is limited.

NATIONAL TRAINING SYSTEMS, INC.

Register with this form, or call: 1-800-225-4698 In Mass. call 1-617-879-0700

To insure advance receipt of your conference credentials, mail form before September 21, 1983, with check, credit card or P.O. payment to: EMCE, 375 Cochituate Rd., Box 880, Framingham, MA 01701.

EMCE Long Beach is sponsored by CW Communications/Inc., publishers of *Computerworld*, *InfoWorld*, *ISO World* and *PC World* and is the largest and most respected publisher of computer-related newspapers and magazines in the world.

Joint Venture With AT&T Hilton Gets Video Network

BEVERLY HILLS, Calif. — Users will have access to 35 public video teleconferencing rooms by the end of 1984 when AT&T and Hilton Hotels Corp. complete their joint venture, it was announced recently.

The rooms will use AT&T's Accunet Reserved 1.5 service — formerly called High Speed Switched Digital Service — which offers data transmission of 1.5M bit/sec.

Hilton will build, own and operate the video conferencing rooms — the first of which will be in New York and Los Angeles. "The new digital network will supplement the corporation's existing analog network which has been providing video conferencing for businesses as

well as entertainment and special events programming," according to Jim Collins, senior vice-president of marketing for Hilton.

Features of the Hilton network include the ability to:

- Set up video conferences with as little as one hour's notice.
- Originate and receive communications at any point on the net.
- Conduct simultaneous two-way communications between any two points.
- Communicate with compatible non-Hilton video conferencing rooms using Accunet.

Further information is available from Hilton Hotels, 9880 Wilshire Blvd., Beverly Hills, Calif. 90210.

Net/Alert System Enhanced For 16-Line Net Systems

CHERRY HILL, N.J. — Avant-Garde Computing, Inc. has announced an enhanced version of its Net/Alert network performance monitoring and management system for 16- to 64-line data communications networks. Previously, Net/Alert systems were unavailable for systems as small as 16 lines.

The Series 50 Net/Alert System for small networks includes all basic Net/Alert system functions, such as the standard real-time performance and status color displays and more than 24 Net/Alert reports and color analytical charts.

Application or transaction monitoring will be available as an option

for small networks, with monitoring for up to eight applications priced at \$25,000. An additional option is a host interface adaptor to transfer the Net/Alert data base to a mainframe for advanced statistical analysis using packages such as SAS Institute's SAS.

Each Series 50 includes a system control unit with fixed and removable disks, one or more line monitoring units, a color CRT and a printer. Up to 64 lines and 1,600 devices and the more than 30 Net/Alert protocols reportedly can be handled by the Series 50.

The Series 50 Net/Alert ranges in price from \$75,000 to \$142,000. Avant-Garde Computing is located at 2091 Springdale Road, Cherry Hill, N.J. 08003.

Firm Unveils Responsetime/1 For IBM Series/1

SAN FRANCISCO — Firesign Computer Co. has introduced a response-time monitoring and reporting system for the IBM Series/1 under the EDX operating system.

The Responsetime/1 is said to identify underutilized terminals and provide a security audit of program usage. The system runs on each CPU to be monitored and occupies 2K bytes of storage, according to a vendor spokesman.

Consisting of two main programs — a data capture program and a report generation program — the system is said to generate reports from the captured interaction data.

Priced at \$965 for a single-site license, the system is available from Firesign Computer Co. at 524 Union St., San Francisco, Calif. 94133.

Excelan Offers Protocol Tool For Xerox Net

SAN JOSE, Calif. — Excelan has put into market a transmission control and internet protocol package for use with its own front-end processor for the Xerox Corp. local-area network.

The software, along with its Model 101 processor, makes up the first self-contained local-area network subsystem, according to the vendor.

The two-part package includes a protocol module and a Unix system networking kit. Said to conform to the U.S. Department of Defense's Arpanet specifications, the module also contains user datagram and internet control message protocols.

Provided in source form, the networking kit includes an I/O driver for the protocol module together with networking applications.

The price of the package is \$75 in quantities of 1,000. The protocol module's source is listed at \$20,000. Availability is scheduled for next month from Excelan at 2180 Fortune Drive, San Jose, Calif. 95131.

Everything you always wanted to know about mainframes in one little box.

Just when you think you have it all figured out, something new hits the DP world. You can't always hire a consultant to keep pace with new developments, but you can take advantage of Amdahl's industry-leading expertise. Keeping Current — Amdahl's unique video series — is the answer. Keeping Current is the time and money saving way for senior DP staff to obtain a clear and insightful analysis of mainframe problem areas, the latest trends, and future directions in hardware and software. You'll learn how to prevent problems, how to get the most out of your existing system, and shortcuts for daily operations.

Because Keeping Current participants don't

have to fly across the country to seminars, you save big money, and because Keeping Current video presentations fit into normal work schedules, you save valuable time without interrupting the flow. Choose presentations that zero in on MVS/XA, IMS/VS, X.25, CMS/SP, NCP, MVS/SP, ACF/VTAM, or VSAM, and get a new grasp of your operation. First time customers receive the first presentation at half price. So don't wait. It's amazing how much there is to learn about mainframes. Start Keeping Current today.

For more information, call Amdahl Education at 800-538-8460 ext. 6393. Within California call (408) 746-6393.

the amdahl phenomenon

In October, 1970, a company was formed expressly to build one product: A mainframe computer that would outperform the mainframe that owned the market at that time. Today, this company is an international success story, a phenomenon.

NEW

Abend-AID PRODUCT ANNOUNCEMENTS

Abend-AID, the standard of performance for debugging OS and DOS programs, has been significantly enhanced with the following options:

Abend-AID/COBOL

explains the reason for a programabend, identifies the COBOL statement and verb where the error occurred, and provides the COBOL symbolic name and contents of the data field causing the error.

The contents of all data elements in Working Storage are displayed by symbolic name and decimal location.

The contents of the current record for each file are displayed by decimal location using record layout format.

Abend-AID/COBOL is a practical SOURCE LEVEL debugging tool.

Abend-AID/ON LINE

gives programmers the ability to view Abend-AID's diagnostic output in an easy-to-use screen format.

The programmer can easily solve abends at a terminal workstation without cumbersome horizontal scrolling and without the need for printed output.

Abend-AID/SPF is a powerful, menu-driven product which gives programmers the ability to view Abend-AID interactively.

Programmers can quiz Abend-AID/SPF to determine why the program abended, where the program abended, and what data is involved.

Abend-AID/SPF in an innovative approach to debugging which makes it easier than ever for programmers to debug programs quickly and conveniently at their terminal workstation.

FREE Abend-AID Product Evaluation.

For additional product information or to arrange for your 30 day FREE evaluation just call 800-521-9353 (in Canada or Michigan, 313-540-0900) or return the enclosed coupon to: Compuware, Systems Software Division, 32100 Telegraph Road, Birmingham, Michigan 48010.

Please send additional information on the following:

- ☐ Abend-AID COBOL
- ☐ Abend-AID SPF
- ☐ Abend-AID ON LINE
- ☐ Free 30 day Product Evaluation

COMPUWARE

ARE YOU KEEPING PACE WITH THE CHANGING FACE OF DBMS?

Watch for
**Computerworld's
October 31st
Special Report
and get current—
FAST.**

How do you select the right DBMS for your installation? Are you fully utilizing the data base management system you have? Are you aware of the do's and don'ts for success with DBMS? Are you clear on the real benefits of DBMS?

You'll get the answers to these and a great many other questions you have on Data Base Management Systems in the pages of *Computerworld's* October 31st Special Report, "The Changing Face of DBMS." You'll get an examination of the latest market studies regarding DBMS. You'll get a look at the changing role of the data base administrator. You'll read about how microcomputer DBMS products are used for projects within mainframe-oriented DP installations.

And there's more. Lots more. Take a look:

- Trends in DBMS products for minicomputers
- The impact of DBMS on the information center
- New uses for data dictionaries
- The impact of fourth-generation languages on DBMS
- Controlling end user access to the corporate data base

You'll get application stores, case studies, news articles and tutorials in this Special Report. And the topics listed above will bring you right through to articles on installing a second DBMS and managing multi-DBMS shops. From search through set-up to multiple systems — you'll get a detailed look at the whole area of data base management systems.

And if you sell utility software packages, data management systems or data base management systems, here's where you'll find your customers next October 31st — reading *Computerworld's* Special Report on Data Base Management Systems. Your ad in this issue will assure them more complete information on the products in the field. Ad close for this Special Report is October 14th. Call your local sales representative at one of the offices listed below or call Don Fagan, Vice President, Sales and Marketing at 617-879-0700.

Bantam Offers Pair of Micros Compatible With Pick

LOS ANGELES — Bantam Computers, Inc. has unveiled a pair of microcomputers compatible with the Pick operating system.

Called the Series 002, the systems come in a desktop model, the 002/7, and a floor model, the 002/15. The hardware is based on the Motorola, Inc. 16/32-bit 68000 microprocessor.

The desktop version comes with 128K bytes of random-access memory, a 10M-byte, 5¼-in. Winchester disk, a 20M-byte, ¼-in. tape cartridge and three RS-232 ports said to support transmission rates of 19.2K bit/sec.

The floor version is enlarged by a 30M-byte Winchester disk and 11 ports.

The desktop computer costs \$13,695; the floor model sells for \$24,395.

Both versions are available from Bantam, which is located at Suite 1200, 6033 W. Century Blvd., Los Angeles, Calif. 90045.

Compatible With IBM 370 STC Rolls Out Optical Disk

By Jim Bartimo

CW Staff

LOUISVILLE, Colo. — Boasting 4G bytes of storage and transmission rates of up to 3M char./sec, Storage Technology Corp. (STC) has released a non-erasable optical disk storage system said to be fully compatible with IBM 370, 4300 and 30 series processors running under the MVS/SP 1.3 operating system.

The 7600 Optical Storage Subsystem consists of a 7640 Optical Storage Unit, a 7440 Optical Media Unit (optical disk), an 8880 Storage Control Unit and Opsam software said to allow a host CPU to write data to an optical disk and retrieve the data as necessary.

Each optical platter will store four billion characters, which is the equivalent of two million pages of double-spaced, typed information. The Optical Media Unit has a reported life of 10 years.

"The STC release will be one of many optical disk systems on the market in 1984," according to Ken Bosomworth, president of International Resources Development, Inc. "Magnetic disks will be the dominant

technology for small amounts of data, but optical disks will push magnetic disks out completely for large applications."

The Optical Storage Unit accepts interchangeable optical disks and uses a technology of coherent light from two lasers

— one records a code on the disk that is read by the second laser as data for the host CPU. Error detection is said to provide the user with only one possible error in 312 disks or 10 trillion bits.

Canaan Computer Corp.'s single-user workstation

Risk Management System Announced by Comtec

SOUTHFIELD, Mich. — Comtec, Inc. has announced a turnkey risk management system said to address all major risk management functions.

Risk Master reportedly allows the user to enter and analyze data for four major modules: general claims (\$1,750), workmans' compensation (\$1,750), incidents (\$3,000) and medication-error tracking (\$1,000). A fifth module, Sortmaster, allows the user to create and define detailed ad hoc reports using a step-by-step menu process.

The turnkey system allows users to respond immediately to management requests, deter-

mine trends, pinpoint problem areas and foresee potential problems. The software runs on IBM, Honeywell, Inc., Prime Computer, Inc. and Digital Equipment Corp. computers using Pick & Associates, Inc.'s Pick operating system, the vendor said. Also, Risk Master is reportedly fully operational on the IBM Personal Computer; an IBM XT version is also available.

The four main modules are available individually or as a complete package for \$7,500. Sortmaster costs \$1,500 and is not optional. Comtec is located at 28366 Franklin Road, Southfield, Mich. 48034.

Canaan Workstation Boasts Mainframe Power

By Patricia Keefe

CW Staff

TRUMBULL, Conn. — Canaan Computer Corp. has announced what it calls the first of a new generation of networkable, single-user workstations that offer mainframe power and run IBM 370 VM/CMS programs.

According to the vendor, the system is designed to put "mainframe-class" computing power into the hands of end users who are dependent on a centralized mainframe, but are getting inadequate response and capability and want to run IBM 370 software.

The system is also designed to be purchased as an alterna-

tive to time-sharing.

Canaan's target market is the Fortune 1,000 IBM 370 time-sharing users, plus the largest financial and insurance organizations.

The Canaan computer is built around an operating system that not only provides access to the extensive body of 370 software — including 370 VM/CMS applications — but also provides access to a host of capabilities reportedly not available in 370-class mainframe systems. These include integrated graphics, multiwindowing display, multiprocessing, concurrent processing and high-speed interaction. The op-

Workstation Runs IBM Programs

(Continued from Page 75)

erating system also is said to feature a built-in Ethernet local-area network system that allows communications to shared resources.

The Canaan machine communicates with other computers and peripherals via a high-speed, 10M bit/sec channel. When communicating, the system operates in a peer network, reportedly avoiding the restrictions of traditional master/slave configurations. Other technical specifications include:

- A 32-bit proprietary processor that executes 370 VM/CMS software in machine language and communicates and shares resources with other Canaan workstations via Ethernet — reportedly without degrading system speed — and a separate processor that performs all I/O functions, including device control, file management and network access.

- A two-bus system architecture — a 32-bit main bus supports the main processor and main memory, speeds program execution and data transfer, while a 16-bit multibus supports peripherals and network and increases throughput.

- A 1M-byte error-correcting main memory, expandable to 4M bytes.

STC Unveils Storage System With 4G Bytes

(Continued from Page 75)

The disk is a 14-in. coated aluminum platter in a protective cartridge that is automatically removed during loading into the storage unit. The disk is then placed on a high-speed spindle and raised into position under the optical head which contains the read-and-write lasers, a vendor spokesman said. It can be written to or read from at 3M char./sec.

The Opsam executes IBM's MVS/SP 1.3 operating system and converts commands from the controller to drive the correct action and responses in the storage unit.

The storage system can also include programmable channel switches said to allow a properly configured 8880 control unit to direct data operations over a combination of one to 16 channels, increasing storage availability and data throughput.

List purchase price for the 7640 is \$130,000 with a lease rate of \$3,785/mo on a 36-mo basis. The 8880 Storage Control Unit, which can have either two or four storage directors, is available immediately for \$65,000. The 7440 media unit is available for \$140 to \$225, depending on quantity. The Opsam software is licensed to 7600 users for an installation charge of \$1,000 and a monthly fee of \$400. A distributed system license option is available for an installation charge of \$750 and a monthly fee of \$300, according to the vendor.

Shipments to end users will begin in the second quarter of 1984, and the disks and storage units will be available through OEMs.

More information is available from STC, 2270 S. 88th St., Louisville, Colo. 80028.

- A very high-resolution, bit-mapped CRT display (1,024 pixels by 768 pixels), with detached keyboard and full graphics controller.

- Automatic self-diagnosis to isolate problem components and an automatic problem diagnosis dial-up modem for remote service and system upgrades.

Options include a 35M- to 140M-byte Winchester disk, 200 or 400 char./sec dot matrix printers, an IBM-compatible ½-in. tape drive and an additional very high-resolution display and keyboard, the vendor said.

Since access to IBM 370 application software is said to be the primary ingredient of Canaan's marketing strategy, the vendor has an ongoing

program of evaluating and certifying third-party software. According to the vendor, three fourth-generation management systems have already been certified: Information Builders, Inc.'s Focus; D&B Computing Services' Nomad2; and Mathematica, Inc.'s Ramis 2. Currently, the only package available for licensing on the Canaan system is Focus, which starts at \$6,500 for the first single-user workstation.

In a typical network of six nodes with shared peripherals, the average price will be about \$35,000 per node. Plans are to introduce a two-user node later this year, further reducing the cost per unit, Canaan said from 39 Linderman Drive, Trumbull, Conn. 06611.

CAD Unit Based On HP Micro

SCOTTS VALLEY, Calif. — Avera Corp. has introduced a computer-aided design (CAD) engineering-workstation built around Hewlett-Packard Co.'s 32-bit microprocessor.

Designated the EDS-2100, the system is intended to support the engineering of integrated and hybrid circuits and circuit boards.

The workstation runs schematics and layout design software along with analysis packages. It has a Tektronix, Inc. 19-in. display, the Model 4115B.

The workstation costs approximately \$100,000 and will be available in January from Avera, 200 Technology Circle, Scotts Valley, Calif. 95066.

IF YOU'RE CONSIDERING CONSIDER

As a systems integrator, you know that there's a world of difference between first generation software products and second. (Think of VisiCalc™ and Lotus 1-2-3™ for example.)

It's the difference between setting standards. And then raising them.

INTRODUCING R-BASE™ FROM MICRORIM™

Rbase is the new generation of relational database software. With a combination of capacity, speed and transportability that today's more powerful PC applications need. (Check out the comparisons.)

Not only that, Rbase is much simpler to use and learn. For both you and your customers. Anyone—computer literate or not—can enter and view data, and generate reports. So applications are up in days, instead of weeks. And quicker turnaround time means higher volume sales for you. Just what you would expect from a second generation product.

MANAGING A DATABASE. CONVENIENTLY.

With Rbase, it's simple. A series of prompts guides you every step of the way. Which means you don't have to be a programmer to create data entry or report forms just like the ones you're used to using.

As you become more proficient, you'll create shortcuts by customizing menus of stored commands. And print reports

as simple or complex as you like at the touch of a key. With Rbase, prompted, ad-hoc queries and customized report formatting become the reality that first generation products could only promise!

Rbase is also very forgiving. It's very hard to make a mistake. That's because commands are simple English expressions—like SELECT, PROJECT, WITH, WHERE, FROM, etc. Dates and dollar amounts are written normally: 11/16/83;

	MAXIMUM RECORDS DATABASE	FILES AVAILABLE CONCURRENTLY	MAXIMUM NUMBER FIELDS DATABASE	TIME TO SORT 1000 RECORDS* (MIN. SEC.)	UPDATE MULTIPLE FILES CONCURRENTLY	PRICE (LIST)
R-BASE 4000	100 billion	40	400	0:39	Yes	\$495
dBASE II	65,535	2	32	5:47	No	\$695
CONDOR	32,768	2	127	2:03	No	\$650

*Sort 1000 records on 1 key value. (IBM PC with 256K and DS DD diskettes)

dBASE II is a trademark of Ashton-Tate. VisiCalc is a trademark of VisiCorp. 1-2-3 is a trademark of Lotus. MultiPlan and MS-DOS are trademarks of Microsoft. CTOS is a trademark of Convergent Technologies. Units is a trademark of Intel Labs.

Redshaw's Micro Functions as Workstation

PITTSBURGH, Pa. — Redshaw, Inc. has made available a new Professional Computer, manufactured by Wang Laboratories, Inc., which will function as a workstation on the Redshaw Comprehensive System for the insurance industry, a software and hardware package utilizing the Wang 2200 minicomputer.

The Professional Computer, which the company said is designed for office rather than home use, will allow Redshaw System users to take advantage of software packages offered by insurance companies and other software suppliers.

The Professional Computer is based on the Intel Corp. 8088/6 microprocessor, using Microsoft, Inc.'s MS-DOS operating system. A spokes-

man said that because this is the same microprocessor and operating system utilized by the IBM Personal Computer, most software currently written for the IBM system will be compatible with the Redshaw Pro-

fessional Computer.

According to the company, the Professional Computer is designed for office and word processing use and features a keyboard with 32 special function keys. The system uses a

16-bit internal data bus and operates at a higher cycle speed, allowing it to run comparable programs faster.

The Professional Computer is priced at \$5,200, Redshaw said from 103 Yost Blvd., Pittsburgh, Pa. 15221.

Adviser K-Series Gets High-End Addition

MINNEAPOLIS — Computer Designed Systems, Inc. has announced a high-end addition to its Adviser K-Series of minicomputers which the company said is 40% faster and stores 35% more than IBM's System/38.

The line, which makes use of report generators and source code generators, is described as "extremely user friendly" and is designed for

manufacturers, medical users and wholesale distributors requiring fast terminal response.

The system runs spreadsheet programs such as Visicorp's Supercalc or Visicalc, a spokesman said. Users may add word processing and text editing modules as well as several thousand application programs. The K-Series computers are said to be up-

ward-compatible with existing Adviser hardware and software.

The K-Series computers are priced between \$140,000 and \$1,200,000. Information can be obtained from Computer Designed Systems, 10911 Olson Memorial Highway, Minneapolis, Minn. 55441.

ESC Announces Design Graphix For CAD Users

BATON ROUGE, La. — Engineering Systems Corp. (ESC) has announced a three-dimensional computer-aided design and drafting system that provides basic geometry, automatic utilities and bill of materials, symbols from user-definable menus, 16 possible pens and 16 layer functions.

According to an ESC spokesman, Design Graphix allows users to take advantage of Rapid, the system's high-level programming language, to include calculations and special commands in the drafting process.

The system also offers Teach, an on-line programmed course, plus the Help facility to assist in-house operating personnel.

Design Graphix can operate on micros and minicomputers as a stand-alone system or as a workstation attached to a larger computer. The system supports a large range of peripherals, including graphics displays, digitizers, plotters and magnetic tape, and can expand to meet future user needs.

Software for a complete Design Graphix system is priced under \$10,000. More information is available from ESC through P.O. Box 80318, Baton Rouge, La. 70898.

Power System Targets Desktops

DALLAS — Bits Power Systems, Inc. has announced a portable, self-contained uninterruptible power system that can be used with most desktop computers.

The 115V, 60Hz isolated output reportedly protects computer operations against utility gaps, spikes, surges, noise, brownouts or complete outages. Backup or portable operating time ranges from five hours at 25W to one hour at 100W, the vendor said. Input power is switch-selectable for either 115 or 230 Vac, 50Hz/60Hz for worldwide application. A 12-Vdc power cord is included, a spokesman said.

Model Pups-AC is available through computer dealers only and costs \$495. Bits Power Systems is located at Suite B114, 11020 Audelia Road, Dallas, Texas 75243.

PURCHASING dBASE II, THIS FIRST.

\$500.00. And, because data entry verification rules are defined up front, you just can't put any "garbage in"—even if you try!

What's more, Rbase allows you to sort and select data on up to ten different criteria, perform totals, and then display the results—all with a single, powerful command (see screens).

QUESTIONS? ASK FOR HELP.

The Rbase HELP feature provides detailed information that describes every command and process required for complete mastery of the database. (As does our plain-English documentation.) For example, if you're not sure what SELECT does, simply key in HELP SELECT and Rbase will tell you what the command does, how it works, even the proper syntax. This way you don't have to keep referring back to the user manual—it's all right there in front of you.

Rbase + MULTIPLAN™ = POWER²

Unlike first generation microdatabases offering the "amazing" capacity of one file and some 60,000 records, Rbase literally blows the lid off database size. You may never create an application using forty files with 100 billion records. But with Rbase, you can.

Now imagine being able to tap all that power in conjunction with one of the most popular spreadsheet programs on the market today: MultiPlan. Rbase is fully compatible with MultiPlan, so you can zip back and forth between programs without cumbersome file manipulation.

THE Rbase PRODUCT FAMILY.

Rbase™ 4000 is a single-user relational database (MS-DOS™

version is list \$495). Rbase™ 6000 is a multi-user version, available early 1984. In addition to MS-DOS, both packages will also be available in CTOS™ with UNIX™ to follow.

The optional extended ReportWriter™ provides enhanced reporting and calculating capabilities (MS-DOS version is list \$150). Program Interface™ is a set of subroutines which allows direct database access from PASCAL or FORTRAN programs (MS-DOS Version is list \$395).

And what happens if you've already got dBASE II? Not to worry. It's easy to transfer your files to Rbase.

30-DAY EVALUATION.

Many computer professionals think Rbase sounds too good to be true. Actually, it's even better.

To prove our point, we'll send you the complete Rbase package for a 30-day trial. If it doesn't live up to your expectations, just ship it back.

To qualify, please send us a purchase order from your company, specifying billing at the end of the trial period. Send it to Microrim, 1750 112th N.E., Bellevue, WA 98004. Or call (206) 453-6017 for details.

Provide for Data Collection

Caere Introduces Bar Code Scanners

LOS GATOS, Calif. — Caere Corp., maker of optical character recognition (OCR) systems, has introduced a family of bar code scanners enabling the user to provide a broad range of automated data collection.

The Caere 200 series bar code scanner is able to provide the speed and accuracy of bar code scanning to users of the IBM Personal Computer, minicomputers, serial terminals and IBM 3278-type terminals with a simple computer interface, the company claimed.

According to the vendor, the bar code scanners and OCR readers offer an alternative to the standard keyboard data collection that allows the user a higher level of data entry control.

The bar code scanners provide interface to most industrial and administrative CRT serial computer terminals and to synchronous data link control displays. The bar code scanners are easily adaptable to harsh environment applications like inventory and shop-floor control, document tracking and accounting procedures, according to the vendor.

Minicomputers, serial terminals and most personal computers are interfaced through an available RS-232C port by the Caere 212 Dual Serial Bar Code Scanner, a spokesman explained. The Caere 240 PCScanner provides the user of the IBM Personal Computer or Personal Computer

XT an integrated board that is a program-transparent keyboard interface.

Users of terminals such as the IBM 3278 and 3178, the Memorex Corp. 2078, the Telex Computer Products, Inc. 278 and the IBM 5251 are supported by the scanner's program-transparent keyboard interface as well. In addition, users of the Personal Computer and 3278-type equipment can add Caere's bar code scanners to applications without changing the existing software.

The Model 240 scanner for the

IBM Personal Computer is priced at \$745. An optional program to print bar code on the IBM Personal Computer or Personal Computer XT is offered for \$179. Model 212 scanners for minicomputers, serial terminals and personal computers are priced at \$789, while the 220 Bar Code Keyboard Scanner is \$944.

The 240 and 212 models will be available at the end of October; the 220 will be ready one month later.

More information is available from Caere at 100 Cooper Court, Los Gatos, Calif. 95030.

Plessey Matrix Printer Boasts Letter-Quality Capability

IRVINE, Calif. — Plessey Peripheral Systems, Inc. has introduced a low-cost matrix printer with correspondence-quality capability.

The Plessey Model LCQ50, manufactured by Texas Instruments, Inc., contains a standard Ascii character set plus seven additional international character sets in a desktop printer.

It has 24 font combinations including standard, compressed, double-wide, enhanced, double-strike and emphasized. The printer also supports raster and mosaic graphics and is compatible with both serial

and parallel interfaces.

Model LCQ50 operates at 150 char./sec in the draft mode or at 90 char./sec in the enhanced mode. The bidirectional LCQ50 supports 80 standard characters per line or 132 compressed.

Six or 8 line/in. may be specified. A 256-char. receive buffer is also standard, with an option of upgrading to a 4,000-char. buffer with X-on and X-off.

The printer, available immediately upon receipt of order, is priced at \$535. More information is available from the vendor at 2632 Du Bridge Ave., Irvine, Calif. 92714.

Disk Controller Can Handle Four Drives

MINNEAPOLIS — Ciprico, Inc., a supplier of multibus disk and magnetic tape controllers, has introduced a high-performance storage module drive disk controller called the Rimfire 50.

The Rimfire 50 controls up to four disk drives and incorporates features such as 48-bit, dual-function error correction code with 16-bit correction, 8- and 16-bit data bus operations, 16K bytes of programmable read-only memory, 32K bytes of optional buffer random-access memory, 24-bit addressing, 2 MHz direct memory access (DMA) transfer rate and 1:1 interleave and generates up to two independent interrupts.

According to the vendor, the Rimfire 50 has the "power and flexibility of the Intel [Corp.] 80186 and the dual-DMA 80186." Two independent DMA devices, one internal to the 80186 and one discrete, can transfer data simultaneously from the disk to the buffer and from the buffer to the system memory, enabling disk interleave of 1:1.

Another feature of the Rimfire 50 is the attach command allowing the user to establish communication with another system peripheral controller.

The price for small quantities of the disk is \$1,606. More information is available from the vendor at 2405 Annapolis Lane, Plymouth, Minn. 55441.

Seminar: How to automate system development.

Seminars on Cullinet's IDMS/R with Automatic System Facility, and their entire line of software products, will be held in the following cities during the coming weeks.

Albany, NY	October 12
Allentown, PA	October 12
Anchorage, AK	October 20
Baltimore, MD	October 12

IDMS/R Automatic System Facility.

One database management system provides an Automatic System Facility for system development: IDMS/R. Fourth generation languages, though excellent productivity tools, only address part of the system development task—namely, steps three and four as shown above. IDMS/R with Automatic System Facility, however, automates all of the steps necessary to develop systems. All you do is specify the data.

The Automatic System Facility dynamically builds the system.

It defines the database; creates screen formats; develops the applications; links the definition, screen and application together, then documents the system.

One DBMS using a powerful system development facility does it all. And does it all automatically. IDMS/R.

For more information on this unique facility, to attend a seminar or for a demonstration see the adjacent page.

Join the experts at the world's devoted exclusively to

Today's automated office is rapidly becoming tomorrow's integrated office. And INTECH '83, the Integrated Office Technology Conference and Exposition, is the first and only forum in the world devoted exclusively to office systems integration.

October 31 - November 3, 1983
• McCormick Place •
• Chicago •

INTECH '83 brings the various components of today's corporate information systems together under one roof. Communications, office automation and data processing are no longer separate camps and the many marriages caused by continued high technology achievements are creating an undisputed overlap of professional capabilities and responsibilities. INTECH '83 bridges the gap between the technologies with four days of intensive seminars and exhibitions that will help top-level management take their organizations into the 21st Century.

Integration Theatre

INTECH '83 features a new concept in session presentation with this theater-in-the-round approach. The Integration Theater is a unique and special format ideally suited for the world-class speakers and the panels and sessions to be held here. These internationally renowned consultants and their topics include:

- Dr. Michael Hammer, President, Hammer & Co.
"Managing Micros in the Corporate Information System"
- Arnold Roberts, President, ADC Associates
"Selecting a Personal Business Computer"
- David Friend, Special Consultant
"Graphics: New Management Solutions"
- Will Zachman, VP, Technology Assessment, IDC
"Microprocessor Impact on Systems and Uses"
- Dr. Howard Frank, President, ConTel Information Systems, Inc.
"Local Networks: Before You Get One"
- Dr. Howard Morgan, Chairman, Advanced Office Concepts
"Solving DP/WP Integration Problems"
- Edward Horrell, President, Mitchell & Horrell, Inc.
"Integration through CBX Technology"
- Dr. John McQuillan, President, McQuillan Consulting, Inc.
"Strategic Planning for Integration — Who, How, When & Why"
- Harry Newton, President, The Telecom Library
"Personal Career Advancement Through Embracing Office High Technology"

Arnold Roberts, President

Conferences

Professional seminars and discussions concerning state-of-the-art technologies will be led by the foremost experts in the field. It is the first time so many of the best and most renowned industry speakers will be gathered together under one roof to discuss the integration of communications, office automation and data processing.

Over 35 General Sessions will be presented by professionals with 'hands-on' experience — professionals who have actually lived through the experience tell their stories and offer suggestions and solutions.

Here's a sampling of the general session topics:

- "Satellite Networks"
- "Network Intelligence"
- "The Multifunction Workstation"
- "Pilot Projects: Corporate PC Acceptance"
- "MIS — OA: Resolving the Conflicts"

Edmund B. Fitzgerald, President of Northern Telecom, Ltd. will speak on "Business Integration — the Vision and the Reality."

first conference & exposition office systems integration.

Keynote Speaker:
John Diebold — internationally acknowledged expert and founder and chairman of the Diebold Group, Inc. Mr. Diebold will speak on "Integration: A Corporate Effort."

Exhibits

There will be over 400 exhibits by leading information companies with the latest vendor architecture and technologies available. Special time is set aside for conference attendees to view all the exhibits and talk first-hand to the vendors.

Here are just some of the fine companies you can expect to see exhibiting at INTECH '83: Apple Computer, Inc., Applied Data Research, Inc., AT & T Information System, Inc., Computer Automation, Cullinet Software, Inc., Data General Corporation, Datapoint Corporation, Digital Equipment Corporation, Exxon Office Systems, Inc., Grid Systems Corporation, ITT World Communications, Inc., Lanier Business Products, Inc., Lee Data Corporation, NCR Corporation, Prolink Corporation, and Telautograph Corporation.

Exhibit hours are 12:00-6:00 p.m. Tuesday, 10:00 a.m.-6:00 p.m. Wednesday, and 10:00 a.m.-5:00 p.m. Thursday.

In-Depth Tutorials

On October 31 some of the nation's leading consultants take the platform for a full day's formal instruction. These four concurrent in-depth tutorials include lecture notes, lunch and a reception with the speakers.

- A — "Corporate PC Management" —
Dr. Michael Hammer, Hammer & Co.
- B — "Advanced CBX Applications" —
Edward Horrell, Mitchell & Horrell
- C — "Local Area Networks" —

THE FIRST MOBILE COMPUTER.

THE COMPLETE COMPUTER FOR THE MOBILE PROFESSIONAL.

Professionals on the move in today's productivity-paced business environment have to run a little faster just to keep up.

They can easily spend half their time in airports, taxis, lobbies and hotels unable to do the work they'd like to get done.

But we have a solution.

Give them the powerful 9 pound, 16-bit computer that works when and where they do.

Give them an advanced battery-powered printer that attaches securely on the computer.

Give them an interactive human interface and operating environment that takes only 15-30 minutes to learn.

And unique field-oriented software that comes in rugged plug-in capsules.

In short, give them the Gavilan™ mobile computer.

PORTABLE TURNED PRACTICAL.

Never has there been a complete business computer system as sophisticated, yet as lightweight, as the Gavilan.

Self-contained, rechargeable 8-hour batteries free the user from external power constraints.

The 8 line X 80 character screen eliminates the need for an external monitor, although you can add one if you wish.

The full-size typewriter keyboard makes data entry as convenient as it is in desktop systems.

A built-in 3½" microfloppy disk drive and modem provide the capabilities of data handling and transmission where they never before existed.

And a 50 character per second printer gives the mobile professional in the field the immediacy of hard copy text, forms, charts, spreadsheets and graphics.

All in a compact 14 pound mobile office.

WE BUILT A MORE MOBILE MOUSE.

The success of any computer depends in part on the "friendliness" and accessibility of the user interface.

Especially in the field.

A standard mouse interface is fine for the expanse of a desktop, but not for work on the move.

So with the Gavilan, we incorporated a built-in touch panel: the first fully integrated computer mouse.

It's a pressure-sensitive pad just above the keyboard. Finger movements across the touch panel control the on-screen movements of a cursor.

But like a mouse, the Gavilan touch panel actually executes virtually all of the user commands, saving the keyboard for typing only.

Through the touch panel,

users store and retrieve data. Cut and paste. Move documents. Scroll through pages of information. Zoom out for a complete look at the format of a document. Or even ask the computer what just happened and what to do next. With one finger.

SOFTWARE IN A CAPSULE.

The intuitive ease of talking to the computer through the touch panel is made possible by the unique Gavilan operating environment and software packages.

The applications packages come in durable capsules called CapsuleWare™. They plug directly into the body of the computer, adding no additional volume. The operating software, (GO System™) then lets each of the applications communicate with each other through a common interface and a sharing of data.

The result is a completely integrated information environment that lets the user combine spreadsheets, graphics and word processing text together.

All in the same uninterrupted user mode.

OUTWARD MOBILITY FOR USERS, UPWARD MOBILITY FOR OEMs.

The Gavilan mobile computer and its CapsuleWare programs are creating vertical market demands—both in MS/DOS and the Gavilan operating environment—for software packages completely unrealized one short year ago.

That means new opportunities in applications development far beyond the typical office-bound programs. From air and sea navigation to banking services. Journalism to field auditing. Anthropology to insurance.

And that means you've got the chance to be first in your chosen field.

A position we strongly advocate.

Gavilan Computer Corp.

Increased Volume Cited

IDT Cuts Cost of Tape Transports

SAN DIEGO — Innovative Data Technology, Inc. (IDT) has announced a 15% price reduction on its Series 1050 IBM/Ansi/Ecma industry-compatible, 1/2-in. nine- or seven-track tape trans-

ports and interface peripherals, which prior to the price cuts ranged in price from \$4,200 to \$10,000.

The reduction is due to increased volume and state-of-the-art production, the vendor said. Included in the price reduction are all models of the TD-1050 series, including the associated systems interfaces for the following mini and micro

business computers: Digital Equipment Corp.'s PDP-11, LSI-11 and VAX-11; Intel Corp.'s Multibus; Texas Instruments, Inc.'s Model 990; Centronics Data Computer Corp.'s Port; IBM's Personal Computer or Personal Computer XT; and Apple Computer, Inc.'s Apple II or III.

IDT is located at 4060 Morena Blvd., San Diego, Calif. 92117.

SDSystems Introduces Controller

DALLAS — SDSSystems, Inc. has introduced its VFW-III peripheral controller for the IEEE-696 (S-100) bus.

The VFW-III is a single-board controller for floppy and Winchester disk drives that complies with the IEEE-696 standard. The board supports simultaneous use of up to three 5 1/4-in. Winchester drives and four 5 1/4- and 8-in. floppy drives in any combination.

The Winchester interface is the ST506/412, which allows systems integrators to select Winchester drives from the majority of manufacturers. Floppy drives may be single- or double-sided and single- or double-density.

The VFW-III is a multilayer card with full power and ground planes. It includes variable-length sector buffers and direct memory access or programmed I/O control. Floppy disk operations include a phase-lock-loop data separator and write-logic software.

The VFW-III is priced at \$895. More information is available from the vendor through P.O. Box 28810, Dallas, Texas 75228.

Firm Unveils Printer Line

PHILADELPHIA — Scriptomatic, Inc. has introduced three dot-matrix printers compatible with the company's Scriptomatic Addressing Computer (SAC I).

The model 280 is an 80-col, bidirectional printer that prints 120 char./sec. The model 281 is a 136-col printer, also at 120 char./sec. Model 282 is a 136-col printer rated at 200 char./sec.

All three low-profile printers are designed to operate with the SAC I, and when combined with a Series 300 Labeler any of the printers forms a complete addressing system.

The models are priced at \$695 for the Model 280, \$1,095 for the 281 and \$1,695 for the 282. More information is available from Scriptomatic at 1 Scriptomatic Plaza, Philadelphia, Pa. 19131.

New Printers for IBM Displaywriter

VERY-LOW-COST/VERY-HIGH-SPEED MATRIX PRINTER delivers fast rough drafts and data processing reports at 200 CPS. Complements your IBM printer.

SCIENTIFIC/TECHNICAL PRINTER prints Letter-Quality Symbols/English Text at high speed without stopping for printwheel changes. LASER PRINTER produces reports quickly in variety of type styles at up to 12 pages per minute.

NCP Smart Box I - the Displaywriter printer interface emulates IBM 5218 Printer. It requires no hardware or software changes to attach these printers to the Displaywriter main printer port number 0.

Please call (215) 277-9595 for details.

INTRODUCING THE ENTIRE SELECTION OF MICROCOMPUTER LINE PRINTERS IN THE WORLD.

Now, for the first time, Printronix gives you the speed, power and reliability of its famous P-series matrix line printers in a microcomputer line printer—the MVP.

Until now, line printers have come in only one size: large. And they've been dedicated to large system tasks. Producing volumes and volumes. Day in and day out.

The MVP offers you that same dependability for microcomputers. With the MVP's unique Hammer-Bank technology, there's no need to change print wheels or adjust character registration. When other printers are ready to break down, the MVP's just warming up. It's the only microcomputer printer built to

take the pressure of high-duty cycle processing. Backed by the meanest mean-time-between-failure rate in the industry.

And the MVP hammers home superior print quality, producing crisp, uniform dots that overlap to form characters so solid, they're clear to the last copy of a multi-part form.

With selectable speeds, the MVP is truly the *most versatile printer*. Capable of "shifting gears" to give you just the output you need—from high-resolution characters at 80 LPM for word processing to compressed print at 200 LPM.

And using the MVP's flexible graphic capabilities, you can generate an unlimited range of customized logos, labels, bar codes, character sets and even draw your own comparisons—in pie charts, line graphs, 3-dimensional representations and much more.

The Printronix MVP: The business printer that really means business.

For more information, contact Printronix at 17500 Cartwright Rd., P.O. Box 19559, Irvine, CA 92713.

VISIANSWER™ THE INTELLIGENT MICRO TO MAINFRAME CONNECTION. AND IT'S AVAILABLE NOW.

By teaming the know-how of VisiCorp™ and Informatics with the IBM® Personal Computer, the best minds in the business have solved the problem of intelligent mainframe data access for microcomputer users.

The solution is VisiAnswer. It is the one product that features data security and control capabilities necessary for today's corporate data processing environment. And at the same time, it provides the end user the ability to selectively access any type of mainframe data... and delivers that data in a format that is *immediately* usable with all VisiSeries™ Products.

With VisiAnswer you get much more than a micro to mainframe connection. You get the technological result of a unique team effort between VisiCorp and Informatics Corporate Micro Systems working with IBM Personal Computers.

We chose the IBM Personal Computer for its leadership in delivering business solutions. IBM chose us as a Value Added Remarketer.

Plus, VisiAnswer brings together VisiCorp's expertise in user-friendly micro software with Informatics proven leadership in data access technology.

The best way for you to see VisiAnswer in action is at a free VisiAnswer Seminar in a city near you. Come learn how you can make the intelligent connection with the micro to mainframe solution from the best minds in the business.

To reserve your place at this valuable seminar or to get more information about VisiAnswer, return the coupon or call toll free 1 (800) 227-3800 Ext. 926.

THE SOFTWARE ENGINEERS

VISIANSWER™ THE INTELLIGENT CONNECTION.

Come see VisiAnswer yourself and learn all about the intelligent micro to mainframe solution at a free VisiAnswer Seminar.

This valuable seminar features video tapes, stimulating lectures, hands-on demonstration and plenty of time for questions and answers, all designed to help you see how VisiAnswer fits your unique business needs. You'll see VisiAnswer at work solving real micro to mainframe connection business problems. Reserve your spot in one of twelve free seminars in a convenient city for you. But please don't delay, enrollment is limited.

For Use With Micros

UPS Debut in 200W, 350W Models

SAN DIEGO — Elgar Corp. has announced 200W and 350W uninterruptible power systems (UPS) for microcomputers.

Both models, the SPR 201 and SPR 401, are said to eliminate power line anomalies and to provide a reserve battery power system that can run computer systems for up to 25 minutes.

The models feature simple control panels indicating the condition of the power supply and a warning buzzer that activates when the devices switch to reserve power, a spokesman said. The vendor also said that the battery on a device will be automatically recharged when the

normal power supply resumes.

The devices are priced at \$645 for the 200W model and \$795 for the

350W model. More information may be obtained from Elgar at 8225 Mercury Court, San Diego, Calif. 92111.

Graphics Plug-In Card Fits DEC-Compatible CIT-161

IRVINE, Calif. — CIE Terminals, Inc. has introduced a new color graphics plug-in card for its Digital Equipment Corp.-compatible CIT-161 color terminal.

The CIG-267 combines DEC alphanumeric software commands and the Tektronix, Inc. 4027A color graphics

command structure.

The CIG-267's dual DEC/Tektronix personality allows computer-aided design, engineering and scientific designers to use DEC alpha commands (in color) and the 4027A terminal's color graphics capabilities simultaneously.

The CIT-161 color terminal provides designers with a 572-by-480 dot resolution and a 75Hz refresh rate for flicker-free displays. Ansi X3.64-compatible, the terminal has 64 programmable color combinations of its eight primary colors.

The cost of the CIG-267 graphics card list is \$1,195; the CIT-161 terminal is \$2,595, for a total of \$3,790 for the package.

The CIG-267 card will be available next month, according to a spokesman for the vendor.

More information is available from CIE Terminals, which is located at 2505 McCabe Way, Irvine, Calif. 92714.

Bar Code Wand, Decoder Interface to RS-232 Port

MOUNTAIN VIEW, Calif. — A bar code reader wand and decoder that can be interfaced to an RS-232 port are available from Intertelephon USA, Inc.

Using existing light-emitted diodes, photosense and microprocessor-controlled algorithms stored in erasable programmable read-only memory, the decoder interprets the digital output from the hand-held wand upon scanning printed bar codes. Codes currently read and decoded include UPC-A, UPC-E, MSI Plessey, EAN-8, EAN-13, industrial and interleaved, according to a vendor spokesman.

The decoder assembly is available in a stand-alone configuration with enclosure and speaker to alert the op-

erator that the code has been read and transmitted and in two printed-circuit board configurations for mounting within a system, terminal, modem or host computer, a spokesman said.

The bar code reader wand costs \$70 in single quantities, while the decoder is priced at \$495 from Intertelephon at 1200 Levin Ave., Mountain View, Calif. 94040.

Gould Unveils Enhancement To Its Model GSU 3056 UPS

SAN DIEGO — Gould, Inc. has introduced an enhanced version of its 500W rated uninterruptible power system (UPS).

The Model GSU 3056 on-line system reportedly provides continual voltage regulation and noise elimination for personal computers, point-of-sale systems and other sensitive loads as well as battery reserve during complete power outages. In addition, the power system includes an internal 10-min battery, or it can

be used with external 48V batteries for periods up to several days, Gould said.

The latest version of the Gould Micro-UPS features line synchronization with slow slew acquisition, table or rack mounting and optional static transfer switch. It measures 5¼-by-17-by-23-in. deep and weighs 75 lbs. Prices start at \$1,450 with distributor discounts available from Gould, Power Conversion Division, 2727 Kurtz St., San Diego, Calif. 92110.

Cache Memory Enhances Units

CLARK, N.J. — Ultimate Corp. has introduced a cache memory enhancement for its Honeywell, Inc. DPS 6-based computer systems.

Designed for use on Ultimate systems that also have the High Performance Processor (HPP) enhancement, the cache memory board contains 4K bytes of high-speed memory and is available as a \$7,000 upgrade. The HPP, also available as a field upgrade, is \$29,000, a vendor spokesman said.

More information about Ultimate systems is available from the firm at 77 Brant Ave., Clark, N.J. 07066.

ACDC Unwraps Power Supply

OCEANSIDE, Calif. — ACDC Electronics has announced a five-output 500W switching power supply.

Features of the RSF505 include an external 115/230 Vac conversion switch, outputs of 2V to 28V on all channels and wireless submodular construction.

Prices of the power supply begin at \$985 from ACDC at 401 Jones Road, Oceanside, Calif. 92054.

Rapicom 5000 With SAF-PAK

Rapicom Unveils Facsimile Device With Redialing

FAIRFIELD, N.J. — Rapicom, Inc. has introduced a desktop digital facsimile transceiver said to incorporate broadcast functions via programmable memory.

The Rapicom 5000 is a microprocessor-controlled CCITT Group 3 facsimile device that provides a 9,600 bit/sec step-down modem said to provide transmission speeds of 15 sec/page.

When equipped with the vendor's store-and-forward package, SAF-PAK, the 5000 can also function in networking applications.

The unit offers a 30-page document feeder and storage of up to 100 telephone numbers for autodialing, a vendor spokesman said.

If a remote terminal fails to accept a telephone call from a transmitting 5000, the local unit will initiate two redialing sequences five minutes apart in an attempt to complete document transfer.

The Rapicom 5000 is available for \$7,000.

With the SAF-PAK software, it is available for between \$9,900 and \$11,000. More information is available from Rapicom, which is located at 7 Kingsbridge Road, Fairfield, N.J. 07006.

Flexible Strategy Seen Key To Office of the Future

By Robert Batt

CW West Coast Bureau

SAN FRANCISCO — An essential key to establishing an effective "office of the future" is for information specialists to put in place a viable strategy, according to Joseph Izzo, president of the JIA Management Group, Inc.

Speaking here recently at the Third Annual Conference on Personal Business Computers, Izzo, an expert in the development and implementation of management and control techniques, said companies must immediately address the issues of productivity posed by office automation.

Addressing the issue of how to integrate personal computers into the evolving office of the future, Izzo said it is vital that DP managers and users together develop a flexible, evolutionary strategic plan that allows for experimentation and change and permits the incorporation of new devices.

"With a flexible strategy in place, the probability of success will be very high," Izzo said. "The company will also be on the leading edge of solving the office productivity problem. Without a strategy, there is a high probability of failure... in achieving the necessary productivity gains for the business."

The key phrase for office automation is "as need dictates generator." This means that instead of getting information from data processing in a fixed format, which must then be reworked to meet the individual needs of executives, the requirements of executives will dictate the form and content of the information they receive, he explained.

"Executives and their professional support staff will have access to the data base they require to extract, analyze and format

information to solve the problem at hand. As the problem changes and pressures mold the issues, [executives] again have easy access to the data base to view new information and perhaps alter their decisions," Izzo said.

Importance of Simplicity

It is important to move toward simplicity in problem solving. Executives want to see a problem, have access to the details relative to it and solve it. "If most companies were to wait for this information from the data processing department, they would have a long wait. They will have lost their competitive edge. Companies must begin immediately to address and resolve the issue of productivity," he warned.

Izzo claimed the problem has been exacerbated by exaggerated claims about the capabilities of personal computers. For example, despite claims to the contrary, there is no communications discipline that allows a broad range of personal computers to work easily or effectively together.

Also, he added, while the personal computer is perceived as a \$2,000 to \$5,000 expense, as users acquire memory, printers, software and communications links and add the costs of training, a desktop computer can, in reality, cost more than \$30,000.

"But personal computers do have their place," Izzo conceded. "They will become just one part of the upcoming, comprehensive, corporate office automation. Rather than attempting to solve the problem of integrating personal computers into existing information networks, companies should focus on a strategy for integrating them into the evolving office of the future," he said.

Philips to Announce Products at Info '83

DALLAS — Philips Information Systems, Inc. will introduce six products aimed at the office automation market at the Info '83 exhibition in New York this month.

Two of the products featured will be the Information Processing System (IPS), a 32-bit supermicrocomputer said to support Philips universal workstations, and the Conversational Management Information System (Comis).

Also to be introduced are: Megadoc, a laser-disk mass storage and retrieval device; the 3005 universal workstation; the 1002 workstation; and a local-area network.

• The IPS will run the Unix System III operating system and permit end-user programming. It is also said to provide capabilities such as shared filing, electronic mail, telex and meetings management. The system will be available at the end of 1984 for between \$50,000 and \$300,000.

• Comis is a software package developed for IBM and compatible mainframes. It uses the IBM 3270 protocol feature of the Philips universal workstations. The package will be available in the second half of 1984 for \$150,000.

• The Philips 3005 series workstation uses an integrated 10M-byte hard disk and can be configured as a stand-alone workstation or clustered with other 3000 series workstations using the Philips local-area network. Available in the second quarter of 1984, the workstation will cost between

The Philips 3005 Universal Workstation

\$9,000 and \$15,000.

• The Megadoc laser-disk system uses advanced digital optical recording technology to provide archival storage and retrieval for very high-volume business applications. Available in the second half of 1984, it will cost between \$250,000 and \$3 million.

• The Philips 1002 is a device said to provide keystroke capture, editing and text transfer through a communications link. It will be available for between

\$1,700 and \$2,200 in 1984.

• For local-area networking applications, these and other Philips products can be interconnected through the Philips local-area network architecture. The network can be introduced as a twisted pair or a CATV coaxial cable. It will be available for \$1,250 per connection in the first quarter of 1984.

More information on these products is available from Philips Information Systems, 4040 McEwen, Dallas, Texas 75234.

For document and text management

Theirs:

STAIRS

Ours:

INQUIRE®

With large volumes of textual material now available in computer-readable form, the indexing, storage, and retrieval of full text has become both an opportunity and a problem for managers of: corporate records, regulatory affairs, corporate libraries, research, and litigation support. IBM has recognized that text management is a critical part of overall information resource management.

They've got the right idea, but the wrong tools.

What about applications which mix text and numbers? How efficient is it to add documents? Can indexing approaches be matched to the application? How flexible is the output formatting?

INQUIRE provides an interactive approach to text management in a single, integrated information resource management system. The INQUIRE thesaurus manager provides vocabulary control and interactive thesaurus-aided retrieval. Users have complete control over output formatting. INQUIRE offers contextual (proximity) searching of text, as well as numeric computation and qualification. And INQUIRE is efficient—no reorganization is needed when documents are added.

One client says it all. "We converted our entire corporate records system from STAIRS to INQUIRE in three weeks, saving \$2,400/month in software costs alone."

We've been helping companies meet complex document and text management challenges

since 1968. If you run MVS, VSI, or VM/CMS, INQUIRE can make text a valuable part of your information resources. Call us toll free today to find out how.

Analysts Say Apple Committed to IBM Link

By Katherine Hafner
CW Staff

CUPERTINO, Calif. — The recent cooling of relations between Cullinet Software, Inc. and Apple Computer, Inc. has prompted speculation over whether Apple's Lisa will be locked out of entry into the IBM mainframe environment.

The response of many industry analysts is a cautious "no."

An April 19 agreement to link the Lisa to mainframe-based corporate data bases through Cullinet's Information Database would have promoted the micro's entry into the IBM environment. The deal came to a standstill after the two companies could not agree on development or marketing strategies

for the interface [CW, Sept. 26].

"It's definitely a setback," commented Mayvid Maclay, an analyst at Creative Strategies International, Inc. in San Jose, Calif. "But even if the agreement doesn't work out with Cullinet, Apple is talking to other companies."

"The important thing is that Apple is committed to the capability to communicate with a mainframe," commented Greg Kelsey, an analyst at San Francisco-based Hambrecht and Quist, Inc. "The key is that they plan to do it. And if you look at the communications technology, there's not any great magic to it."

Joan McKay, an analyst at Kidder Peabody, Inc. in New

Is Apple's Polish Beginning to Fade?

By Patricia Keefe
CW Staff

Despite expected sales of \$1 billion this year, Apple Computer, Inc. has suffered a few bruises, according to some industry analysts interviewed recently.

These analysts are predicting layoffs of up to 600 Apple employees by Christmas and expect the personal computer maker's stock value to take a nose dive in the early part of next year if the layoffs occur.

Apple is beginning to show signs of wear and tear. Following the announcement two weeks ago of a price cut and the unbundling of the firm's top-of-the-line Lisa, Apple's stock dropped 8 1/2 points. So far

this year, Apple's stock has plunged from a high of \$62 per share in June to a low of \$24.25 in the third week of September.

In addition, Apple recently projected a sharp decline in fiscal fourth-quarter earnings over the same period a year earlier, forecasting a profit of \$5 million to \$8 million vs. the previous year's fourth quarter of \$18.7 million.

However, Apple still expects its earnings for the year to exceed 1982 results by 25% to 30%.

Kenneth Bosomworth, president of International Resource Development, Inc., reported rumblings concerning Apple layoffs. Short
(Continued on Page 90)

The bare light bulbs and exposed I beams (above) will soon give way to a broad expanse of airy showrooms (see sketch) as work begins in earnest at Boscom, an international computer and communications market center on Boston's waterfront. The official "ground breaking" at the converted warehouse was held recently, witnessed by a large crowd of press and city officials and featuring keynote speaker F.G. Rogers, IBM's vice-president of marketing. IBM has agreed to lease over 20% of the Boscom floor space. The facility is one of several such permanent showrooms planned throughout the country.

IBM Seen Leading Pack With Personal Computer

By Robert Batt

CW West Coast Bureau
SAN FRANCISCO — IBM will ship 1.2 million personal computer units in 1984, a 45% market share, according to Peter Wright, vice-president at The Gartner Group, Inc.

Speaking at the recent IBM Futures Conference here, Wright, a former financial ana-

CW at IBM Futures

lyst at IBM, said the personal computer industry will also witness a violent shakeout over the next 18 months, with only

Analysts Say Apple Beginning to Lose Its Shine

(Continued from Page 89)
term layoffs of 120 people — 40 in the Lisa group and 80 in the Apple IIe group — are likely, according to another industry analyst. Moreover, if Christmas sales are slow, "there is a possibility of up to 600 layoffs," he added, sug-

gesting that Apple is over-staffed.

An Apple spokeswoman denied all reports of layoffs. She suggested analysts might be confused by the recent dismissal of temporary workers in Dallas, who were hired to handle an increase

in demand for the IIe. Sales for the IIe have since "flattened out, as expected."

But the decline of what some industry observers call Apple's cash cow (the IIe), mismarketing of the Lisa and stepped-up competition, particularly from IBM, are seen as the primary reasons behind the bruising of Apple. Several analysts pinpointed what they perceive as problems:

- Competition from IBM — Possibly because of a feeling that Apple lacks the necessary resources to compete with IBM, several analysts suggested Apple as a probable merger candidate.

- The Lisa — There is concern that Apple may have "too many eggs in its Lisa basket," noted Charles Newton of Newton-Evans Research Co. Despite an 18% price cut, the Lisa is still too expensive, according to Bosomworth, consultant Marc Rudov of Venture Development Corp. and other analysts. These analysts charge that while the few packages available for the Lisa do not address the needs of small business users, the Lisa has

been stymied by the IBM Personal Computer in the corporate environment.

- The IIe and III — Sales are said to be slipping. Most analysts interviewed agreed the two older Apple machines need to be upgraded. Apple is expected to unveil a Lisa-like upgrade for the IIe in January. Plans also include a separate business unit devoted to the Apple III,

the spokeswoman said.

- Marketing — Apple is seen as a victim of its own success. It is similar to Osborne Computer Corp. in that it created a market and then failed to understand how that market changed, according to Rudov and other analysts. Rudov recommended Apple abandon its "No. 1 strategy" and start thinking of itself as "No. 2."

NAGGING POWER PROBLEMS? RUPS™

THE PRESCRIPTION THAT ENDS 100% OF YOUR POWER RELATED PROBLEMS.

Computer Power Products RUPS™ (Rotary Uninterruptible Power Supply) combines the unquestioned superior power conditioning capabilities of a motor generator with battery ride-thru to provide the greatest combination of reliability, power quality, performance, efficiency and price effectiveness in the history of uninterruptible power supply.

Available in all 60 hertz ratings from 12 to 500 KVA single units and parallelable for higher requirements. Also available in 415 hertz output and 50 hertz input or output.

Take this prescription today — end your nagging power problems!

Apple Wants IBM Link

(Continued from Page 89)

York, said that while the termination of the agreement is a "minor negative," the recent increase of software development for the Lisa is bound to produce a similar link for the computer, "whether they do it themselves or have somebody else do it. I think it's safe to assume that Apple knows it has to have an IBM link for its computer to be a viable part of a corporate environment," McElroy added.

Marc H. Rudov of Venture Development Corp. in Wellesley, Mass., holds a slightly dimmer view of the Lisa's fate. "Cullinet probably figured Lisa was going to go gang busters, then when it didn't, they pulled out," Rudov said.

Apple, however, persists in its optimism for the Lisa's future, insisting that the computer is intended for a different market than the IBM Personal Computer.

"We realize the importance of providing a system solution to users," commented Floyd Kvamme, Apple's executive vice-president of marketing and sales in a recent interview, "but it's important to understand that Apple is fundamentally in the business of making individual people capable of being more productive in their jobs."

Semiconductor Industry Warns

Stiffer Export Act Seen Damaging

BOSTON — The Reagan administration's current desire to tighten national security export controls represents a major threat to the U.S. semiconductor equipment and materials industry, executives of that industry told government officials here recently.

At a day-long series of meetings on technology transfer, the Semiconductor Equipment and Materials Institute (Semi) leveled several blasts at representatives from Washington, D.C., including William Schneider Jr., under secretary of state; Frank Knapper, assistant deputy under secretary of defense; and Lawrence Brady, assistant secretary of commerce.

Larry Hansen, executive vice-president of Varian Associates and head of Semi's government affairs committee, commented on the administration-proposed replacement to the current export administration act, which expired Sept. 30.

"There are current bills in both the House and Senate that have been developed over a period of time with inputs from Semi and other industrial associations, and both bills propose a new act that would be more explicit in how exports should be administered," Hansen said. "The administration's version, by comparison, is very broad and allows the administration to write export regulations any way it sees fit."

"The administration is working on a false assumption that equipment being 'diverted' to unfriendly countries comes largely from the U.S.," Hansen continued. "The reality is that less than 3% of all semiconductor manufacturing equipment produced in the free world, which is shipped to the Eastern bloc, is made in the U.S."

The House and Senate bills have met with the approval of Semi, as well as the Computer and Business Equipment Manufacturers Association, the American Electronics Association and the Scientific Apparatus Manufacturers Association. Hansen outlined the industry-supported legislation, which included:

- Elimination of certain individual license requirements within the block of countries belonging to the North Atlantic Treaty Organization, excluding Iceland, including Japan.
- Ensuring availability of bulk licenses, such as the distribution license, for exports to Western destinations.
- Establishment of a comprehensive operations li-

cense for the transfer of critical technology to Western destinations.

"Western overseas markets are indispensable to the growth of U.S. industry," Hansen said. "Any further steps to restrict U.S. sales to these markets in a pretense of restricting shipments to Eastern Europe could literally put many of our companies out of business."

U.S., Japan Pact Eliminates Tariffs on Semiconductors

WASHINGTON, D.C. — An agreement reportedly reached recently between the U.S. and Japan will eliminate tariffs on semiconductor imports in both countries beginning next spring.

A formal announcement is expected within weeks, as the Japanese must first seek clearance from their parliament. Legislation to cut the tariffs is also pending in the U.S. House.

The agreement is designed to stimulate trade between the two countries — the largest consumers of semiconductors in the world — and is considered a victory for the semiconductor industry here.

Your IBM PC's Freeway to the Future

3270 Coax

Micro-mainframe link

SPEED UP 2.35 Mb.

Your IBM Personal Computer — or PC-XT — can access your IBM mainframe's data base and accomplish file transfers through existing 3270 coaxial network. Easily. Inexpensively. There's a family of Forte products for the micro-mainframe link. Plug a Forte board into an expansion slot in your IBM PC — remote or channel attached and linked via BSC or SNA/SDLC — and you've put your PC on-line with your host via coax. To the host, your PC is a 3278/3279 terminal, but functionally you have standalone computing power in a high-performance intelligent workstation.

Forte products for the micro-mainframe link are totally soft-loaded, and enhancements will be diskette-based. Such Forte upgrades as new terminal emulations and custom file transfers will be on diskette, so your investment today is protected. Right now, Forte products provide such delights as switch-selectable address selection, field-configurability of PC elements such as keyboard changes, program symbols, full-color graphics, menu-selected file transfers, and access of full-screen host applications. There's lots more, too, including parity and remote dial-up of the host via coax. All the reasons for a micro-mainframe connection for your business are compelling today. They'll be essential tomorrow. We can help you put your IBM Personal Computers on the Freeway to the Future now. Ask about it. That's our Forte.

Exec: What PCMs Need to Compete With IBM

By Robert Batt

CW West Coast Bureau
SAN FRANCISCO — Better technology, competitive prices and equal service and support facilities are essential for plug-compatible manufacturers (PCM) competing with IBM.

This was the message delivered to data processing professionals and computer vendors at the IBM Futures Conference here recently by

Robert O'Neill, director of corporate planning and business development at Amdahl Corp.

O'Neill told attendees at the conference that, for the most part, being equal to IBM is not good enough if PCMs are to succeed.

"The only way to be successful against IBM is to provide machines that offer significantly better performance than theirs at

CW at IBM Futures

costs that at the very least are no worse than IBM's," he declared.

O'Neill, a former IBM researcher, said that with Big Blue's huge bulk buying ability, its costs per chip are inevitably lower. The only

way to compete with IBM, according to O'Neill, is by having better technology and getting better performance per chip.

"It's going to be increasingly necessary to provide users with added value. Therefore a PCM vendor has to be as good as, if not better than, IBM's service and support systems.

"It's not enough on its own, but without it a manu-

facturer cannot stay in the game for long," O'Neill warned attendees at the IBM (Continued on Page 93)

IBM to Gain Micro Share, Exec Says

(Continued from Page 89)
IBM and Apple Computer, Inc. becoming real money winners.

Big Blue, he asserted, will gain an additional 20% market share in 1983 compared with last year through the shipment of 600,000 Personal Computers and XT models. This compares with 190,000 Personal Computers shipped in 1982, the model's first shipment year.

In 1984, he continued, IBM will double its 1983 performance, excluding the expected introduction of the low-end Peanut computer.

While Apple will sell over 600,000 units of its Apple IIe this year, Wright said it will be the last personal computer product to have such a long life cycle (seven years).

The personal computer industry, he asserted, is undergoing a changing competitive environment, with product cycles getting shorter, vendor margins declining (now at around 17%, compared with 25% in 1980), less profitable distribution channels and increasing dealer requirements.

"To be a low-cost manufacturer and compete with IBM, you must add value to your material costs or be a better purchaser of components than IBM."

Wright said IBM's strategy for micros is to leave the pioneering to others, while developing technology in-house and purchasing from outside vendors. IBM will respond to competition only if it considers the incursion into the market serious.

Wright said that IBM plans to expand its personal computer marketing channels on a flexible but controlled basis.

By the end of the decade, Wright predicted, microcomputers will account for over 30% of data processing expenditures. To prepare for this, IBM will have an expansive low-end product line in place by 1985, including a low-cost personal computer, an upgraded Personal Computer, a home computer and terminals with local intelligence and peripherals for direct entry into data bases.

"IBM will have multiple products for each market segment. They will roll out their products and notch up a lot of winners," he claimed.

Save 50% on your communications cost.

Avanti's new T1 UltraMux.

It lets you take maximum financial advantage of low-cost T1 tariffs. Using UltraMux, you can replace up to 128 lines with one T1 line. Plus, you can have additional voice circuits, increased data transmission rates and more capabilities, too.

The UltraMux sends voice, data and video in any combination. That means the UltraMux can handle your telephone communications, data transfers and video teleconferencing. The system's high bandwidth, up to 10 Mbps, means you can use satellite, private microwave and fiber optic communications links now and T1 and T2 links as they become available.

Ultra flexible.

Select the exact channel configuration you need; up to 64 synchronous or voice channels; 128 asynchronous channels. Maximum channel speed can go as high as 8.2 Mbps, and you can digitize voice at 16 or 32 Kbps.

If your communications mix changes at different times of the day or night, UltraMux can automatically change to match your required configuration. And for maximum utility, dynamic channel allocation assigns bandwidths only when needed.

The UltraMux has centralized point-to-point or network-wide control. So, from anywhere in the system you can monitor and test the entire system or its individual components, perform complete reconfiguration or change any operating parameter.

The UltraMux is flexible enough to expand as you do. Its modular interface works with whatever communications equipment you now use, and can easily adapt to future needs as well.

Ultrafast payback.

This graph shows some typical monthly line cost savings using Avanti's T1 UltraMux. Depending on your usage you can easily save up to 50% or more.

We'd like to show you exactly how much Avanti's UltraMux can save your company. Just complete the coupon below. We'll send you a free, customized T1 UltraMux Cost Savings Analysis.

Send coupon to Avanti Communications Corp., Aquidneck Industrial Park, Newport, RI 02840, or call (401) 849-4660.

Industry Consultant Tells Attendees

Big Blue Seen Poised for Office of Future Assault

By Robert Batt

CW West Coast Bureau

SAN FRANCISCO — IBM is poised for a full-scale assault on the office of the future, overtaking AT&T in the process, according to an industry consultant.

John King, vice-president of the DMW Group, a consulting firm specializing in communications and data base technology, said IBM will emerge as a major player in all aspects of communications technology over the next 10 years.

Speaking at the recent IBM Futures Conference here, King said Big Blue's communications plan is to expand into new markets, take a leadership role where required, work with leading-edge companies such as Rolm Corp. and Satellite Business Systems and "cover all the bases," including office systems, local-area networks, private branch exchanges, network management and home computers.

'Architectural Upheaval'

"We are in the midst of an architectural upheaval in the world of information processing as communications technology becomes as important as computing, and by the end of this decade, IBM will be taking more money out of American business than the telephone companies," he asserted.

Claiming that AT&T's Western Electric is still in a "utility mode," King said users should not expect leadership products from AT&T.

What is Needed To Compete With IBM: Exec

(Continued from Page 92)

conference. This will not be easy, according to O'Neill, because of increasingly unfavorable cost ratios in the area of service and support. Labor costs are going up, he explained, at the same time that hardware costs are decreasing.

This means that as more devices are integrated into the hardware — a job for skilled DPer — units that need to be replaced become more expensive.

Squeezing Mini Sector

In line with other speakers at the IBM conference, O'Neill asserted that the rise of the microcomputer and the sustaining influence of mainframes are resulting in the squeezing of the minicomputer sector.

"The mainframe is the engine for certain types of processing, for example, the creation of centrally controlled large files, which micros or distributed processing will never be able to take over.

"At the same time," he continued, "the growth of micros is supplying work for mainframes and therefore aiding their growth. Mainframes would be growing by 10% to 15% less than they currently are if it were not for micros."

"This does not mean that IBM will jump willy-nilly into things that are not related to what they are doing today. They are only slowly developing the gut feeling that moving information is as important as storing or processing it, and they are willing to follow the competition into new areas," he said.

IBM, King added, will initially concentrate its communications products on the business sector and evolve new products from its current installed base.

However, to grow in this new arena, he contended, IBM must recognize that its Systems Network Architecture (SNA) will not suffice.

CW at IBM Futures

While conceding that SNA is the dominant data communications network in the world today, with between 60,000 and 80,000 users, King said its major problem is that it was designed in an era when IBM thought all problems could be solved on mainframes.

"Implementations have become very cumbersome on SNA. Nevertheless, it has become too costly to abandon or rewrite [an estimated \$30

billion of user code has been written to support SNA], and so it will be extended to include more applications, local-area networks and network management facilities," he said.

Turning to the low end, King asserted that the microprocessor-based desktop computer has changed the nature of computing and the requirements for communications.

"Mips [millions of instructions per second] are migrating straight to the desktop. By the end of 1984, more computing power will be on desktops than in computer rooms, and there is a growing need to make computing power conform to how people work," he said.

How Raytheon's new, ergonomic information processor covers all the angles.

Our display tilts and swivels so your neck doesn't have to. Because extra comfort means extra productivity.

Angle the keyboard for comfort. One more way our system adjusts to you, instead of the other way around.

Instead of multi-stroke command codes, Raytheon gives you one-stroke command keys, each labeled in plain English.

Flick a lever and our hydraulic chair adjusts to support your back and reduce strain and fatigue.

Sculpted keys conform to the contours of your fingers. After hours at the keyboard, you'll feel the difference.

Training is fast, efficient and thorough — right on your own premises by experienced customer service personnel.

If all human beings came in the same shapes and sizes, and did precisely the same job, you wouldn't need an information processor as flexible as the Raytheon RDS-200.

We designed the Raytheon information processor to adapt to human anatomy. Instead of asking people who operate our system to adapt to us.

The result is an ergonomic system that's among the most comfortable and easiest to use. And a most productive addition to the office.

It's also versatile. The Raytheon information processor can converse with a variety of other word processors, host computers, and mini and personal computers. And with readily available CP/M® software, it can perform just about any office data processing job.

Planning for shared resources, clustered word processing, and system? Look to Raytheon. Start with the RDS-200, the extraordinary information processor. Call 800-343-6676. Or use the coupon.

Forecasts & Findings

BOCs to Reap Windfall

The deregulated Bell operating companies will experience a \$5 billion regulatory windfall over the next decade from the implementation of cellular-radio telephone service, according to "Cellular Mobile Radio," a report from International Resource Development, Inc. (IRD).

With telephone companies granted rights to one of two cellular systems for each city authorized by the Federal Communications Commission, and competition for the other rights likely to result in delays for nontelephone company bidders, the former operating companies should build up a lead of 700,000 users of the services, according to IRD.

The report is priced at \$1,850 and is available from IRD, 30 High St., Norwalk, Conn. 06851.

Software Houses Tested

Systems software for microcomputers will need to become more powerful and easier to use to satisfy greater demands and will play a major determining role in spectacular marketing successes and failures over the next few years, according to a report by Creative Strategies International, Inc. (CSI).

Software houses will face a challenge to their market holds as increased memory capacities and lower transportability barriers between systems take hold, CSI said. Companies will have to be well positioned in all areas of microcomputer strategy to remain viable, according to the report, which examines the structure of the industry.

"Microcomputer Operating Systems" is available for \$1,450 from CSI, Suite 275, 4340 Stevens Creek Blvd., San Jose, Calif. 95129.

On-Line Banking Booming

On-line branch equipment for banking systems will create a \$4.8 billion market over the next five years, with automated teller machines (ATM) and cash dispensers comprising 51% of the market and teller terminals another 41%, according to a report from Frost & Sullivan, Inc.

While banks and thrift institutions will continue to consolidate, the number and size of bank branches will grow, and the growth will require on-line equipment to ease management of the larger networks, the report said. Commercial banks will place 68.2% of the orders, with savings and loans acquiring 22.4%, according to the study.

Priced at \$1,275, "On-Line Branch Banking Forecast: 1983-87" is available from Frost & Sullivan, 106 Fulton St., New York, N.Y. 10038.

AT&T Seen Losing Share

AT&T is likely to continue to lose market share in the \$800 million modem industry in the U.S. as deregulation offers more opportunities than problems to independent vendors, according to a report by Venture Development Corp. (VDC).

Although AT&T originally set the

standards for modems, independents have selected market niches and have innovated technologically, while AT&T has failed to respond quickly to opportunities presented by changes in technology and the competitive environment, according to "The Market For Voice Grade Modem Equipment."

Priced at \$2,790, the report is available from VDC, 1 Washington St., Wellesley, Mass. 02181.

Mag Media Mart to Grow

The computer magnetic media industry will grow at a 30.9% annual rate over the next five years, with flexible diskettes experiencing a market-share growth from 33% in 1982 to 56.5% in 1987, according to "The Computer Magnetic Media Industry: A Strategic Analysis 1982-1987," a 250-page study by Venture Development Corp. (VDC).

In 1982, media shipments totalled \$1.3 billion and should grow to \$5.2 billion in 1987, according to the report. The flexible-diskette industry will grow at an annual compound rate of 45.8% over the five-year period, increasing sales from \$445.1 million to \$2.9 billion.

The study is available for \$3,290 from VDC, 1 Washington St., Wellesley, Mass. 02181.

Outside Maintenance OK

Computer users have a much higher opinion of independent computer maintenance firms than most computer and terminal manufacturers believe, according to a recent study by Frost & Sullivan, Inc.

The study, "Third-Party Maintenance of Computers and Data Terminals in the U.S.," states that "the use of third-party maintenance may have a significant place in your business." The study showed that most computer and data terminal users think third-party maintenance companies are as good or better at maintenance than the computer maker, often more responsive and nearly always lower in price.

Independents now account for about 10% of the total computer and terminal maintenance market, the study reported.

The study is available for \$1,350 from Frost & Sullivan, which is located at 106 Fulton St., New York, N.Y. 10038.

Competition, Pricing Wars Seen in Portables Market

NORWALK, Conn. — Bitter competition and pricing wars are forecast in the portable and transportable computer market, according to a recent report from International Resource Development, Inc.

The 215-page report predicted that "at least half of the current manufacturers of portables will be acquired, out of business or in niche markets within the next three years."

The report also estimated that by 1987 approximately one-quarter of all personal business computers and office workstations will be portable, amounting to more than a million units.

The report advised manufacturers to seek out small, specialty, industry-specific markets to escape the bruising competition in the general "white-collar productivity tools" market area.

Successful manufacturers in the portable computer market of the mid-80s will likely be those who have achieved good distribution and lowered manufacturing costs, according to the report.

Entitled "Portable Computers," the report (568) is available for \$1,650 from International Resource Development at 30 High St., Norwalk, Conn. 06851.

IBM CICS/VSAM USERS PROTECT YOUR DATA

INTEGRITY/DRS provides both CICS and batch VSAM users total data set integrity.

INTEGRITY/DRS can recover VSAM records or data sets that were lost due to a system or program malfunction, equipment failure or user errors.

INTEGRITY/DRS is designed to

- Provide data integrity between backups
- Journal in both ON-LINE and BATCH
- Report the activity against data sets
- Backout selected data set activity

INTEGRITY/DRS is available for a 30 day free evaluation. Call or write for additional information.

VAX RESOURCE ACCOUNTING SOFTWARE

PACS™ is #1 in VAX™ Resource Accounting, Internal/External Billing and Chargeback, and Performance Monitoring... #1 because it serves more VAX installations than any other resource accounting software package. PACS is the only resource accounting package that has met the rigorous standards for acceptance in DEC's™ exclusive EAS library. In fact, you can even buy PACS directly from DEC, if you wish.

PACS provides much more than standard VAX resource reports. Extra features include flexible billing algorithms, user budgeting, efficient disk storage collection, port speed accounting, software/hardware tracking and an optional login enhancement—EZLOG!™ EZLOG allows users to specify projects during login, making it the only software available with true 3-level reporting by account, project and user. With EZLOG, you can even change projects without logging out.

Source code is provided for both PACS and EZLOG. Plus, STI gives you unprecedented support via toll-free telephone, TWX or mail. Go with the #1 Resource Accounting Software Package... PACS.

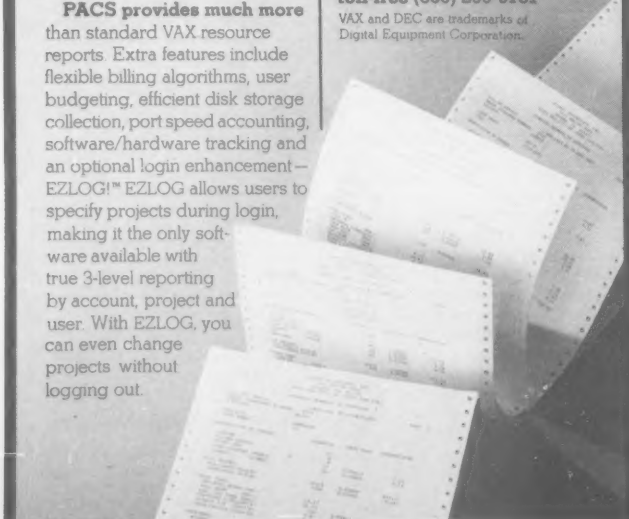

Write or call today for details.

CDC to Expand Business Advisors Subsidiary

MINNEAPOLIS — Control Data Corp. has announced plans to market the expertise of company specialists in human resource development and strategic planning through the expansion and reorganization of Control Data Business Advisors.

One hundred and fifty corporate staff employees have been transferred to Business Advisors, a wholly owned subsidiary of CDC, where they will be included in the work force of three new Business Advisors organizations that will market their

skills nationally while still providing them to the parent company.

According to a company spokesman, the reorganization of Business Advisors is an example of Control Data's strategy of using existing staff resources to establish additional

businesses or profit centers that sell services to the parent company and the external market.

By marketing the staff functions, the company expects to reduce overhead expenses while increasing Business Advisors' product offerings and revenues.

Under the expansion and reorganization plan, Business Advisors' President George F. Troy will oversee three operating companies: the Human Resources Services Co., to be headed by President Roger G. Wheeler; the Marketing and Planning Services Co., with President James R. Morris; and the Small Business Services Co., which will be under the direction of President Gail E. Bergsen.

GSS Developing Drivers for Manufacturers

WILSONVILLE, Ore. — Graphic Software Systems, Inc. (GSS) has begun a program to distribute software device drivers to graphics peripheral equipment manufacturers.

Through the Peripheral Vendor Distribution Program, manufacturers can obtain standard device drivers for MS-DOS as well as Vision for the personal computer. Drivers for Unix will be available soon, GSS said.

To participate in the program, the manufacturer supplies GSS with a

prototype or production version of the peripheral. GSS will then develop, debug and test the device driver with a number of different personal and small business computers. After the manufacturer approves the driver, it is placed in GSS-Drivers, a library of drivers for distribution to microcomputer OEMs and indepen-

dent software vendors. The peripheral manufacturer receives the device driver, rights to royalty-free distribution and appropriate documentation.

Cost of the device drivers ranges from \$10,000 to \$25,000 from GSS through P.O. Box 673, 25117 S.W. Parkway, Wilsonville, Ore. 97070.

New Division To Concentrate On Office Mart

ROCHESTER, N.Y. — Computer Consoles, Inc. has established its Office Systems Group to develop integrated hardware and software products for the office market.

The division, based in Reston, Va., will develop systems building on the company's telephone technology and incorporating word and data processing, file management, electronic mail and administrative and decision support functions. New products emanating from the group will feature integrated software, the Unix operating system and several fault-tolerant capabilities, the company said.

John McNulty, vice-president and general manager, will head the new group. The division's initial product offering is Officepower, a Unix-based system incorporating several office automation features.

Disk Cartridge Key to Iomega, Verbatim Pact

SUNNYVALE, Calif. — Verbatim Corp. and Ogden, Utah-based Iomega Corp. have entered into a joint licensing agreement to produce a flexible disk cartridge.

Under the terms of the agreement, Verbatim will supply Iomega with the media for the disk cartridge, which will incorporate Bernoulli technology.

Commenting on the agreement, Gabriel Fusco, president and chief executive officer of Iomega, said, "Flexible disk cartridge technology will bring into one product the removability and low cost of flexible disks with the superior storage capabilities and random-access time of rigid, giving end users another alternative in magnetic media storage."

Iomega manufactures and markets the Alpha 10, an 8-in. flexible disk cartridge, and the Beta 5, its 5¼-in. version.

Will the Japanese succeed in altering the balance of WORLD COMPUTER POWER?

Technology Transfer Institute presents a one-time opportunity to join . . .

Edward Feigenbaum

James Martin

with 12 world authorities on knowledge-based systems, artificial intelligence, and computer systems architecture including:

- Koichi Furukawa
- Frederick Hayes-Roth
- Edward Fredkin
- Michael L. Dertouzos
- H. Penny Nii
- Takeo Kanade
- David Shaw
- Samuel Fuller
- Ralph E. Gomory
- Nils J. Nilsson
- Pamela McCorduck
- Bruce Delagi

The Japanese have their sights on becoming number one in the industry by the latter half of the 1990s. They aim to dominate the computer industry by establishing a "knowledge industry" in which knowledge itself will be a saleable commodity.

The Japanese have both strategy and tactics. Even partially realized concepts that are superbly engineered can have great economic value, preempt the market, and give the Japanese the dominant position they seek.

Are we about to blow it again?

Remember our complacency toward Japanese initiatives in other technologies? In the '60s small cars, the '70s consumer electronics, today half the world market for the most advanced memory chips! The Japanese vision is clear: a major market share of the computer industry in the 1990s.

America invented this technology. If we focus our efforts we should have little trouble in dominating the second computer age as we dominated the first. America needs a national plan of action for the knowledge systems of the future . . . NOW.

Technology Transfer Institute has gathered together the foremost thinkers in the field of knowledge-based systems, artificial intelligence, and new computer systems architectures. They will describe the current technology, what the Japanese Fifth Generation Project is really trying to accomplish, what we can do in the immediate future, what the risks are for not following through, and what impact future knowledge systems will have on our work, our lives, and our technology.

GREYHOUND COMPUTER CORPORATION

SUBSIDIARY OF THE GREYHOUND CORPORATION

THE DIFFERENCE BETWEEN BUYING YOUR FIRST COMPUTER SYSTEM

Most companies' first computer was a word processor or a small business computer. Or maybe somebody's personal computer. Well, the "computer age" has come of age.

Now you need a system. A total office system. Integrated solutions for processing, storing, and sharing all the information your business needs—now and in the years to come. A system that grows with you. Your last system.

The Molecular series of computer systems is modular, like your own business. You can add workstations like you add people—without changing the organization. And without losing system power or control.

If you start with only two workstations and grow to as many as thirty-two, the Molecular system grows right with you. No change in software. No loss in power. No difference in performance.

As you expand, you'll have questions. You'll need help. Advice. And service. Molecular has a national support system in place now. They understand business systems. They understand business. They understand service. They're ready for your call.

At Molecular, we believe that your next computer should be your last. If you agree, call us at 800-538-8157, ext. 971 (in California, 800-672-3470, ext. 971). We'll be glad to send you more details. Or write Molecular Computer, 251 River Oaks Parkway, San Jose, CA 95134.

AND YOUR LAST.

AT&T Branch, Firm Announce Lease Program

PARSIPPANY, N.J. — Anticipating the future growth potential of videotex and teletext services, AT&T Consumer Products and the Machine Tool Finance Corp. of Bridgewater, N.J., recently announced a new lease/purchase program for AT&T's Frame Creation System.

The program for the system, which allows users to create, edit and format graphics and textual information for videotex and teletext applications, will be available through Information Systems.

According to Clarence Selin, director of Consumer Information Products for AT&T Consumer Products, the company expects interactive services will continue to increase in popularity. He said the company intends to support that growth, which will make two-way information services available to millions of households by 1990.

The Information Systems leasing subsidiary was established solely to accommodate the leasing of videotex, teletext and other information systems equipment.

IBM's French Factory Customizes Latest Chips

By Paul Gillin

CW Staff

CORBEIL-ESSONNES, France — In the eerie yellow light of an environment that more closely resembles a laboratory than a factory, IBM here is producing integrated circuits for its full line of large computers — including the new 4361 and 4381 — using equipment and procedures the company says are the most advanced in the world.

The methods are a step up from the "liquid" technology of chip production that has dominated that field since integrated circuits were first introduced in the early 1960s. For the first time they allow chips to be customized without requiring engineering changes or retooling, a spokesman said.

Discarding traditional photolithography methods, which are too unreliable for high-density production, the procedure allows chips to be generated directly from magnetic tapes prepared by computer-assisted design (CAD). The new techniques further allow a variety of integrated circuit types to be etched on the same silicon wafer, a capability that was also not previously available.

Corbeil-Essonnes is the largest integrated circuit plant in Europe and maintains the world's largest catalog of parts, with over 16,000 different numbers, IBM said. It produces integrated circuits for all IBM large computers distributed outside the U.S.

'Clean' Environment

Production takes place in a "clean" environment in which air purification equipment occupies nearly as much space as manufacturing equipment. Air is purified to the point of less than 100 particles per cubic foot compared to tens of thousands in the fresh air of the surrounding French countryside. Workers, clad from head to foot in sterile white lab gear, tread in antistatic shoes on floors that are scrubbed three times every five days. In all, the degree of cleanliness is "1,000 times better than in surgery," according to IBM spokesman Raymond Duranton. Still, dust is the primary enemy of integrated circuits, more than 54% of which are discarded as unusable after the six-month manufacturing process is complete.

Two new processes, however, have recently improved both the reliability and flexibility of chip production, Duranton said. Electron-beam etching uses a high-intensity shaft of energy to carve channels in the

silicon wafers. The etches are then filled with boron — conducting material that is injected into the paths.

The process of preparing the silicon wafer has not changed much in recent years. Cylinders of pure silicon from Germany are cut using diamond-tooth saws into slices measuring 0.4 mm across. The wafers are then polished to a mirror finish and coated with photosensi-

tive resin.

However, etching and "doping," which is the process of injecting the boron into the chips, have been improved with the new technology. Whereas etching was previously done by exposing the wafers to light through a photo mask and washing away the substrate with acid, the electron-beam technology produces a cleaner and sharper etch, Duranton said.

Driven by two IBM 3033 mainframes and multiple slave minicomputers, the electron scanner directs deflected beams onto the integrated circuit. The design is driven by a CAD program written on magnetic tape. The computer-intensive application makes Corbeil-Essonnes, "the largest IBM customer in Europe," he said.

Doping was previously done at high temperatures

with gas diffusion in a process that required precise temperature control for long periods of time. The new process uses particle acceleration and ion implantation to direct a nearly pure shaft of particles into the etches. The beam is so pure that an injection of 1,020 atoms per square centimeter can be controlled to a purity of 100 atoms per square centimeter, Duranton said.

Choose the publications you need to keep up with your part of the computer world.

We are the world's largest publishers of computer-related newspapers and magazines, serving more than three-million computer-involved people in more than 20 countries around the world. And we have a publication to suit your needs.

Computerworld is THE weekly newspaper for the computer community. Complete, objective coverage of the use of computers and computer technology in large to medium organizations — from mainframes to micros, office automation to communications. More than 500,000 computer user and computer industry executives rely on CW for the news they need. Annual subscription of \$44 includes special, extra issues of **Computerworld OA** (covering office automation), **Computerworld on Communications**, **Computerworld Buyer's Guides**, **1983 issues include Systems and Peripherals, Terminals, Software and Computerworld Extra** (covering microcomputers).

InfoWorld is the newsweekly for microcomputer users. IW's complete coverage of all the latest news includes up-to-the-minute announcements of new hardware and software products, as well as detailed, independent reviews of the most significant hardware and software products for all major brands of microcomputers. Annual subscription of \$31 includes special extra **REPORT CARD** issues with compiled reviews for easy reference.

PC World is our monthly magazine for users of the IBM PC and compatible computers. Each issue is packed with the information you need to get the most out of your PC, from hardware to software news and reviews to useful applications of your computer. There's no better way to make the most of your investment. Annual subscription is \$24.

ISO World is our semi-monthly tabazine for Independent Sales Organizations, including retailers, dealers, distributors, systems houses and other resellers of computers or computer-based products and services. For subscription information please complete the coupon below and mail.

To enter your subscription, use the coupon below — or take out your charge card and call, toll-free, 800-343-5730 (in Mass., call 617-879-0700).

CDC, NCR Division to Open CAD Services Center

SANTA CLARA, Calif. — Control Data Corp. and NCR Corp.'s Microelectronics Division have jointly announced the opening of an electronic computer-aided design (CAD) services center.

Through the venture, the vendors will offer a combination of consulting, training and computing resources designed to assist integrated circuit manufacturers and systems houses in applying state-of-the-art CAD techniques, from the initial design concept to the production stage.

Located here, the center will be managed by CDC's Information

Systems Design unit and has specially designed and equipped work areas for customer use, including engineering workstations hooked into CDC's Cybernet data services network.

NCR will provide its Semicustom Design System, an integrated set of tools for design capture, logic simulation, performance analysis and ac/dc test generation. The computer-simulated circuit description will be transmitted via Cybernet services to NCR. Device fabrication will take place at NCR's Fort Collins, Colo., microelectronics facility.

AT&T Announces Officers Of Info Systems Division

MORRISTOWN, N.J. — AT&T has announced the top officers of its Information Systems Division, which will provide installation, maintenance and sales services for the company's business customers in 1984.

Bruce G. Schwartz has been named division president, effective Jan. 1, and William G. Ebben was appointed executive vice-president, responsible for national services operations.

Additionally named as officers were: John Berndt, Eldon Hanes and Peter Milano, all vice-presidents reporting to Schwartz; and regional vice-presidents Paul Caswell, Northeast; Tom Cross, Mid-Atlantic; Bob

Haley, Southeast; Ken McLarty, Great Lakes; Dan Wiedemeier, Western; and Bob Clark, Pacific, all reporting to Ebben.

The new division will comprise 60,000 field services and sales employees, who will be transferred from the Bell operating companies when the court-ordered divestiture is initiated.

AT&T said that the employees will be doing for the new division what they are presently doing for the Bell operating companies, namely leasing, selling, installing and maintaining the company's line of communications equipment.

Compucorp Plans To Acquire Litton's Monroe

SANTA MONICA, Calif. — Compucorp, Inc. recently announced the signing of a letter of intent to purchase the operating assets and business of the Monroe Division of Litton Business Systems, a subsidiary of Litton Industries, Inc.

According to Compucorp President Elmer R. Easton, the addition of Monroe's resources would give Compucorp one of the largest distribution capabilities of office automation and related products in the U.S. The company said the combined sales of Compucorp and Monroe are currently \$200 million a year.

Monroe, which has assets of approximately \$100 million, will be owned 80% by Compucorp and 20% by Litton, with the intent of eventual 100% ownership by Compucorp. The transaction, which is expected to close by year end, is subject to approval by the board of directors and shareholders of Compucorp and the board of directors of Litton.

Monroe markets a line of calculator, computer, copier and accounting machine products. Compucorp manufactures and markets a line of office automation products and systems ranging from stand-alone word processors to multistation local-area networks.

Explore the software universe with the Computerworld Buyer's Guide to Software.

The software that's right for your system and your company's needs is not just 'discovered'. Finding it takes research, an understanding of your current and future business needs, thorough planning, and careful evaluation of the available software. If you've ever had to shop for software, you know the possibilities seem endless. Now, you can explore the software universe with one, easy-to-use reference — the *Computerworld Buyer's Guide to Software*.

The *Computerworld Buyer's Guide to Software* is the third in our series of market-specific directories to computer-related vendors, products and services. It will offer detailed, all-inclusive listings and up-to-date information on software packages and the companies that sell them. Listings are divided into two sections: complete product listings and vendor profiles. Product listings include application software, DBMS, utility software, decision support systems, systems software, microcomputer software and more. Vendor profiles include company name, address, contact information, primary markets served and more. Tab dividers separating each category and cross refer-

ences will further add to ease-of-use. In addition, there will be articles on topics such as new thinking in DBMS, software distribution, micro-to-mainframe links and artificial intelligence.

There are an estimated 6,000 vendors in the software market. The *Computerworld Buyer's Guide to Software* will provide buyers with much needed help in sorting through the diverse packaged software offerings. And, it will offer advertisers a powerful vehicle for telling their story to *Computerworld* subscribers at that crucial moment when they are actively seeking software and vendors.

The issue date for the *Computerworld Buyer's Guide to Software* is November 23. Watch for our other *Computerworld Buyer's Guides* in 1984.

The *Computerworld Buyer's Guides* are sent exclusively to the more than 114,000 *Computerworld* subscribers in the U.S. One more good reason to subscribe to *Computerworld*.

For more information, call Kevin McPherson at (617) 879-0700 or your local *Computerworld* sales representative.

POSITION ANNOUNCEMENTS

Data for Our Most Extensive Computer Salary Survey Has Been Compiled!

Call Today for Our New, FREE Mid-year Report.

It covers more positions and places!

Do you know how your salary compares with your peers? Whether computer professionals make more or less in other geographic areas. Or, now that recession is history, what economic resurgence will mean in terms of future compensation levels for computer people?

Our new, mid-year *Local Metropolitan Computer Salary Survey* — the most extensive one published to date — details salary differences in major metropolitan areas throughout the United States and Canada. It's chock-full of new statistics; some you'll find have changed substantially from past reports.

2,350 position and compensation categories.

The new Survey is based on an in-depth analysis of salaries offered by our diverse client base as well as income data provided by thousands of computer professionals we are in contact with on a regular basis.

Not only does our new report provide national median figures, it also breaks out salary data by individual market. In all, fifty position categories were surveyed in each of forty-six markets. Included are positions in programming, software marketing, systems design, data communications, mini/micro systems, data base, computer operations, EDP auditing, computer marketing, sales, management, field service and others — at various levels of experience and at different size computer system sites.

A useful tool for career advancement.

The Survey is compiled by Source Edp, the world's largest recruiting firm that's devoted exclusively to the computer profession.

If you're wondering where your career and income are heading, the report just might be the most valuable compensation guide you'll

read and refer to often. It will not only help you evaluate your current career progress, but show you what skills are in most demand and what you can expect to earn in the future — with and without certain skill sets.

Call for your FREE report.

The new Survey is available at no charge to computer professionals. Call the Source Edp office nearest you to request a copy, with-

out obligation. As you'll discover, there's no better way to pinpoint salary levels with more precision or to gain insight into emerging opportunities. It could be the best reading you'll do all year.

INFORMATION RESOURCE MANAGER ICMA Retirement Corporation

The ICMA Retirement Corporation (RC) is a rapidly growing administrator of local government pension plans. Its business has doubled in each of the past three years and expects to be at the billion dollar level within the next five years. The Corporation is preparing to make a major commitment to upgrade its information resource systems, to include the acquisition of new equipment, personnel, and procedures.

The new Information Resource Manager will be responsible to the President for planning and directing the development of corporate data and communications systems. The management style of the Corporation utilizes team management techniques, and the Manager, as a department head, will participate in these activities.

The position is a start-up opportunity, to include the selection of staff and equipment. While it is clearly a "ground floor" situation, the Manager will be compensated in line with similar positions in the Washington, D.C. area.

Applicants should have a solid foundation in current and projected techniques and tools in these areas:

- electronic data processing
- voice and data communication
- micrographics
- records management
- office automation
- systems relating to financial environments

Please send resumes to:

President
ICMA Retirement Corporation
1120 G Street, N.W., Suite 700
Washington, D.C. 20005

DATA PROCESSING AT COLECO

WEST HARTFORD, CONN. DATA CENTER

Coleco, a major manufacturer in the consumer electronics industry, has successfully translated consumer needs into some of the most innovative products of the 1980's.

Of course, this means growth. Which is why we are now inviting highly experienced professionals to join our expanding team at our Data Center in suburban West Hartford, the core of our business operations.

DECISION SUPPORT SYSTEMS PROGRAMMER

Your responsibilities will include determining user needs, systems structuring, programming and user liaison for a number of mini and micro computer systems. Requires a proficiency with Honeywell Level 6 and DPS-6 experience and proficiency with CP/M-MS/DOS, BAL, PL-1 and COBOL. Degree in Computer Science or Business Programming plus at least 2-3 years experience strongly preferred.

SYSTEMS SOFTWARE PROGRAMMER

For this position you'll need experience with Honeywell Level 6, DPS-6 minicomputer hardware, software and systems applications. Requires a knowledge of CP/M-MS/DOS, Assembler and COBOL. Degree in Business Programming or Computer Science plus at least 3-4 years systems software programming, maintenance and documentation experience preferred.

DATA BASE ANALYST

To qualify, you should have 2-4 years CODASYL data base experience with IMS, DMS/11, or IDS-2 with on-line interactive software. Two of these years should include COBOL experience in a business environment. In addition, you should have a background in T.P. Systems with TPFO, a working knowledge of conversational and non-conversational TPR techniques, plus the ability to translate schemas and subschemas and work with application systems in analyzing design alternatives and debugging.

COMMUNICATIONS ANALYST

This is a ground floor opportunity working on new system implementation. Requires experience with communications software programming and modification on Honeywell GRTS-II package, NPS systems, DSA architecture or IBM communications SNA architecture. Also requires the ability to program in 355 MAP, GMAP, Assembler or BAL.

SENIOR PROGRAMMER ANALYST (HMS)

Highly visible project team responsibilities for new manufacturing system implementation. Requires at least 3-5 years application and systems software programming experience in a Honeywell mainframe environment, working on modifications and implementation of software packages. Also requires proficiency with COBOL, TPR, and IDS-2. Knowledge of HMS strongly preferred.

Once you join Coleco you'll receive an excellent salary and benefits package plus the opportunity to work on highly visible projects and experience outstanding career growth. To apply, please send your resume with salary requirements to:

Dale St. Pierre, Senior Recruiter, Dept. CW-103

CHOOSING THE RIGHT SOFTWARE COMPANY

One of these people made the wrong decision.

Choosing the wrong software company to work for can be a hard fact to face up to.

We'd like to help you save face. We're Computer Corporation of America. The braintrust that brought forth the MODEL 204 DBMS. Recently rated #1 overall in a Datapro survey, MODEL 204 is recognized today as the most powerful and fastest growing DBMS for IBM mainframes. Recognize what we're saying. This level of professional acclaim and commercial success is the direct result of serious efforts on the part of advanced research and astute marketing sensibility. One without the other simply won't do.

Hard-nosed, self-serving rhetoric? Perhaps. But face it. It's silly to work anywhere else.

PRODUCT SUPPORT

•**PRODUCT SUPPORT** Technical Consultants are needed to provide pre- and post-sales support for MODEL 204 DBMS. Your responsibilities will include pre-sales presentations, analysis of user requirements, benchmarks, customer training, and installation. Requires experience in IBM Systems/Applications software, with emphasis on operating Systems, database, and teleprocessing. These positions involve travel and may be based in Cambridge, New York, Washington, DC, Atlanta, Chicago, Los Angeles, or San Francisco as well as internationally.

DEVELOPMENT & TECHNICAL SERVICES

•**DEVELOPMENT** Challenging opportunities for energetic and creative Sr. Software Engineers to design, develop and implement "features of the future" for MODEL 204 DBMS. Requires solid experience with IBM assembly language (BAL) and systems development, as well as knowledge of IBM operating system internals.

•**CUSTOMER SUPPORT** Accomplished professionals to provide technical customer support for MODEL 204 versions and updates. Participate in design, development and maintenance of support tool database applications. Involves occasional travel to customer sites. Requires a minimum of 2 years' experience in User/Customer support, solid knowledge of DBMS, JCL and IBM applications or strong systems experience, with good interpersonal/communication skills. BS in EE, CS or equivalent preferred.

•**SOFTWARE QA** Develop test plans and procedures, create test tools and assist in testing new releases of the world's fastest growing DBMS. Participate in developing Development & Technical Services Department standards. At least 1-3 years' DBMS experience and background in a vendor environment preferred. Software QA experience and BS/MS in CS or equivalent required.

YOUR COMPUTER CAREER IS TOO PRECIOUS TO WASTE.

Regardless of your age you don't have an endless amount of time to reach your ultimate career objectives. Indeed, you should want to achieve this goal as soon as possible. Every move you make should be a deliberate, calculated step along a carefully planned career path. In the process, to be really effective, you'll require skilled professional help.

At NCA we're not interested in merely finding you a new position (lots of firms can do that). We want to help you to plan for and achieve realistic career development. What is more, we have the exceptional opportunities, the close contacts (locally and nationally) and the representational skills to do exactly that.

Come in. Call. Or mail your resume to the NCA firm nearest to you. Confidentiality is assured. Company clients assume our fees. Now, we urge you to use the services of NCA... the people who understand that a computer career is too precious to waste.

National Computer Associates

PROGRAMMERS - ANALYSTS

are needed in our Computer Sciences organization to support work involving the enrichment of uranium for use in nuclear power reactors, energy research and development, and the development of nuclear weapons systems. These positions require a minimum of three years' applications programming experience and a Bachelor's degree, preferably in computer science.

Applications will be developed primarily in COBOL under IBM MVS, DEC VAX VMS/UNIX, or DEC TOPS 10/20 environments. Applications experience with data base management systems, data communication systems, graphics, or text management systems is highly desirable. Duties and responsibilities include the design, development, implementation, and maintenance of on-line management information, business management, and production management systems.

Union Carbide offers an excellent salary and benefits package and a relocation program. U.S. citizenship is required. Send resume, including salary requirements, to:

SYSTEMS PROGRAMMERS

State-of-the-art data communications system with statewide on-line network capabilities

United Virginia Bank's advanced data processing environment has been a key factor in maintaining our leadership as Virginia's largest bank. How? Through a productive combination of sophisticated programming techniques, a large scale IBM environment, and by a motivated staff of systems/programming professionals.

Expansion of our Operations Group has created new opportunities with primary responsibilities in the installation and maintenance of: NCP with PEP, network products, TSO products, and Series I software including support of OEM systems code.

Several years systems programming experience is required, including knowledge of NCP, VTAM and Assembler language programming. Series I experience is strongly preferred; CICS, IMS, MVS and JES2 would be helpful.

You will earn a competitive salary and complete benefits. Send your resume in confidence to: **Ellen R. Barnard, UNITED VIRGINIA BANK, P.O. Box 26150 Richmond, VA 23260.** An Equal Opportunity Employer M/F/H

NORTHROP ADVANCED SYSTEMS DIVISION... THE FUTURISTS

AVIONICS PROFESSIONALS (Southern California)

There's much more to Northrop's Advanced Systems Division than modern systems and equipment. Consider our new Pico Rivera facility, the home of our new dimension in aircraft technology. Applications that span the future of aerospace development are bringing exciting challenges to the most creative of technologists. If you're at the peak of your profession and are seeking those challenges that will thrust you into the top of your field, contact us. We're currently seeking individuals in the following areas:

Avionics Systems Analysis

Will develop and perform computer based 6 degree of freedom dynamic simulations to define the integrated weapon system performance in areas such as navigation, flight path control, terrain following/avoidance and weapon delivery. Using simulations and analysis will develop baseline and tolerance limited performance capabilities of airborne weapons systems equipped with sophisticated digitally controlled avionics. Requires 4 or more years experience in analysis of dynamic systems using advanced digital control theory and the ability to develop modularized and well documented digital computer based simulations. A BS in EE, Physics or Math is required.

Digital Computer Specialists

Requires an avionics equipment engineer to be responsible for digital computer subsystems design and computer vendor technical management. Will ensure all technical requirements are met including performance and interface/integration/compatibility with all avionics/non-avionics subsystems within cost and schedule restraint. Must have 10 years experience in avionics subsystem design including 5 years in a digital avionics computer design which includes hardware, computer and non-computer interface and software integration. A BS or MS in Engineering, Physics or Math is required.

VAX/VMS System Programmers

Requires an experienced VAX 11/780 system programmer to develop a computer system for high technology in real and non-real time applications. This senior level position requires 5 years experience with DEC software/processors and a BS in computer science or electrical engineering.

Selected candidates will receive excellent salaries and a wide variety of benefits. Please send your resume to:

Rich Lee

SOFTWARE ENGINEERS

THE MOST ADVANCED FACILITY
MAKING THE MOST ADVANCED OPERATING SYSTEMS
MEANS ADVANCEMENT FOR YOU

Digital Equipment Corporation, the world's second largest computer company, has New England's largest self-contained software organization in Nashua, New Hampshire. It is here that VAX/VMS, the cutting edge of Operating Systems technology and a major reason for Digital's leadership of the minicomputer industry, is developed. And it's here where you'll help continue the development of VAX/VMS.

VAX/VMS Development. You will analyze, design, test, and implement state-of-the-art improvements.

You should be knowledgeable in virtual memory management, file and record management subsystems, networking, device drivers, utilities, or contemporary human interfaces.

You should have a minimum of 3 years' experience with a B.S. in Computer Science or equivalent.

Test Systems Development. You will develop innovative software test systems to validate the functional behavior of VAX/VMS during its release cycle, and you will improve the reliability of existing facilities.

You should have at least 2 years of experience in VAX/VMS or comparable operating systems and have a B.S. in Computer Science or equivalent.

Performance Analysis. You will plan and conduct studies to aid in the understanding and improvement of the systems performance of new versions of VAX/VMS systems in use; plan and design workload characterization studies of VAX/VMS systems in use; develop performance measurement tools to support these activities; disseminate appropriate performance information to Digital's marketing and sales force.

You should have a minimum of 2 years' experience in performance analysis or operating systems development and have a B.S. in Computer Science or Electrical Engineering or equivalent.

Join us and you'll work in the pleasingly rural atmosphere of our Spit Brook facility located just 35 miles from Boston. And you'll be rewarded with the fully competitive salary, excellent benefits, and extraordinary advancement opportunities only the world's second largest computer company can provide.

Interested? Please send your resume to: **Lou Sinagra, Digital Equipment Corporation, Dept. 0918 3804, 110 Spit Brook Road, Nashua, NH 03062.**

We are an affirmative action employer.

Sr. Communications Systems Programmer

San Francisco Bay Area

American President Lines, Ltd., a leader in international intermodal transportation, has an opportunity for a professional to build and maintain international and domestic SNA networks.

Our Sr. Communications Systems Programmer position calls for a take-charge personality, self-starter, previous supervisory experience and an individual who can work independently with minimal supervision. To qualify, you should have at least five years in-depth systems programming experience in the following areas:

- 1) Experience in ACF-VTAM, ACF-NCP in MVS environment... installation, tuning and problem resolution
- 2) Recent exposure to IDMS and CICS
- 3) Network design and installation
- 2) Communications Systems Management... NPDA, NCCF WILBUR, INTERACT, ASSEMBLER, MVS-SP1.3, MVS-XA.

APL offers excellent compensation and top corporate benefits. Expedite resume with salary history to R. Wenzel, American President Lines, Ltd., Three Waters Park Drive, Suite 115, San Mateo, CA 94403. No phone inquiries please. Responses will be limited to request for interview. The company will not consider resumes without salary information. We are an equal opportunity employer m/f/h.

AMERICAN PRESIDENT LINES

Give us your resume

We'll give YOU San Francisco!

Some people come to sail on the Bay, some to ski in the Sierras, and some to snorkel in Santa Cruz. But the professional climate is the real reason, and every bit as exciting.

There's nobody better qualified than CRG to introduce you to San Francisco. We've been here longer—over 10 years—know everyone in EDP worth knowing, and our list of client companies reads like the Who's Who of the business world.

Send your resume today, or call. All fees, interview, and relocation expenses are paid by our clients.

The Heart of a Giant

amdahl

What will technical professionals find at the heart of a giant?

We've built our reputation for computer systems technology, design innovation and product reliability on one simple foundation — a quest for excellence. At the heart of the Amdahl commitment, you'll find the vision and dedication to reach your peak potential.

Software

Software is a major investment at Amdahl. Contact Bob Tyler at (800) 538-8460, extension 6190 (from California call (408) 746-6190 COLLECT) about these excellent opportunities:

- Enhancements/Modifications
- Installation/Maintenance
- Sysgens
- Software Compatibility
- Software Development
- Software Quality Assurance & Test

Programmers need 2-7 years VM or MVS background in an IBM 370 environment, with experience in one or more of the above areas. Managers need 1-2 years management experience in addition.

Hardware

Contact Sam Osaki at (800) 538-8460, extension 7886 (from California call (408) 746-7886 COLLECT) about these opportunities to contribute to Amdahl's leading technology:

Sr. System Design

- Bipolar ECL Design
- Microprogramming
- I/O Processors
- Channels
- Sustaining
- Memory Systems/Cache
- Console
- Instruction Unit
- Prototype Bring-Up
- Arithmetic Unit

BS/MSEE or equivalent and 3+ years related experience designing high-speed medium to large-scale computer or peripheral systems required.

Hardware Diagnostics

Intermediate/senior/manager level positions require BS/MSEE or CS and 3+ years related experience. Use of Assembly languages and OS to exercise hardware of large-scale computer systems, plus a working knowledge of high-level languages and system architecture. Field engineering, system test or prototype bring-up experience.

Join our continuing quest for excellence. Call either Bob Tyler or Sam Osaki, or send your resume to Amdahl Corporation, MS-300, Dept. 10-172, P.O. Box 470, Sunnyvale, CA 94086. We are an equal opportunity employer through affirmative action.

DATA PROCESSING

SOHIO is combining talented and creative minds with advanced technology to further our aggressive oil and gas exploration and production efforts. In San Francisco, our Scientific Systems Division seeks the following scientific computing professionals to provide vital support to our Western Region activities.

CDC Operating System Specialists

Your expertise is needed to support the NOS version 2.1 operating system on Cyber 865 and Cyber 740 computers. In addition, you will provide networking support for 2551 network processing units. Successful individuals should have extensive experience with assembly language programming and operating system internals.

Networking Specialist

We are building an integrated network of distributed resources ranging from personal computers to vector super computers. This will include high performance local area network (hardware and software) and remote links to Cyber 205 and Cray super computers. Experience with hyperchannel hardware, CDC and DEC computers, and DECNET and high performance networking software is desired.

Workstation Specialist

In this position, you will support existing remote batch and PDP 11 workstations. Qualified candidates will have VAX VMS operating system experience in addition to distributed processing and communications concepts experience.

SOHIO's search for the best technical talent is an integral part of our expansion strategy. Our facilities include a new data center, enabling SOHIO to put the most advanced data processing technologies at your disposal. For immediate, confidential consideration for any of these opportunities, forward your resume with salary history today to Judy Alter, Sohio Petroleum Company, SO36, 50 Fremont Street, San Francisco, CA 94105. We are an equal opportunity employer M/F/H/V.

Your search
leads to Sohio.

CONSULTING ANALYST

To play a key role in determining NCR's future in retail software

Here is a rare opportunity to (1) Select, influence and affect broad technical direction in retail applications software; (2) Lead a technical group; (3) Determine the general approach to building compilers and retail operating systems; (4) Direct and execute data base efforts requiring several subunits; (5) Serve as a vocational applications expert, directing and executing complex systems applications.

You will, in short, have leadership responsibilities with the number one company in retail automation systems. The Engineering & Manufacturing operation you'll be joining has produced over a hundred thousand POS systems. The position has unique aspects, and can lead to advancement in management or technical areas.

Credentials sought: about 7 years experience related to retail operating systems and compilers; and involvement with DB design in a variety of different types—i.e., hierarchical, network, Codasyl. Should have at least BSCS, BSEE degree or equivalent.

For prompt, confidential consideration, please send resume with salary history to Cheryl Snyder, Dept. B55, NCR Corporation, P.O. Box 728, Cambridge, Ohio 43725.

Complete Computer Systems
An equal opportunity employer

MICROCOMPUTER PROGRAMMER/ANALYST

CRB Systems, Inc., a computer systems/consulting firm located in Rockville, Maryland has a position open for an experienced programmer/analyst. Candidate should have:

- B.S. in Computer Science, Math or Physics;
- 3-5 years experience in data processing systems;
- experience in design and implementation of computer systems;
- experience with design of systems for microcomputers; and,
- knowledge of C (required).

Send resume (include sample of work, especially with C) to the attention of Victoria Swindle, 6001 Montrose Road, Suite 300, Rockville, MD 20852. Will not reimburse for relocation. Salary negotiable. EOE

WANTED MICRO-COMPUTER SPECIALIST

The Princeton University Computer Center needs someone who understands micro-computer hardware and software and who can help faculty, staff, and students choose and use micro-computer systems. The person we are after will know what hardware and software is available, how to use it with micro-computers (especially the IBM PC), and will be able to keep up to date on all new developments in this area.

This position requires someone who is adept at programming micros, teaching people about micros, and getting micros to interface with other large and small computers. This person will also assist in developing user documentation for our micro-computer systems. Experience with the IBM PC is essential. Experience with IBM 370 computers will be very helpful.

Please send your resume including salary requirements to John Piggott 87 Prospect Avenue, Princeton New Jersey 08544.

Data Processing Professionals

BE PART OF TODAY'S TOP SUCCESS STORY: BURGER KING

Burger King and success are synonymous. The finest products and the best people have made us the world's second largest restaurant chain in less than 30 years.

Due to our rapid growth and expansion, our I. H. Department is in need of experienced professionals with strong background in one or all of the following areas:

- * Requirements analysis, system and program design. Good communication skills for interaction with I. H. staff and use of personnel. Prior programming history helpful.
- * Strong corporate financial and accounting systems understanding, with ability to relate business needs to DP systems. Strong communicator.
- * Good analytical and programming skills. COBOL proficiency a must. JCL and debugging skills essential. Ability to deal with user community.

All of the above positions will be in a large scale 30XX IBM environment, using MVS, TSO and related utilities. IDMS exposure is a plus. Burger King's success means highly competitive salaries, an excellent benefits program and the opportunities for real career growth only a dynamic and aggressive organization can offer.

Investigate your role in the Burger King success story by sending your resume in confidence to:

The Bulletin Board

Our Low-Cost Way to Sell Your Equipment in Computerworld

What is The Bulletin Board?

We have a classified section designed to help you buy or sell individual software and hardware. It's especially suited to companies with a piece of used equipment for sale. For one low price, you can advertise to over half a million **Computerworld** readers nationwide.

How Does The Bulletin Board Work?

- The Bulletin Board is designed to advertise only one piece of equipment or software per unit.
- Units are one column wide by one inch deep at a cost of \$115.00 per column inch. Although several units may be purchased for one advertisement, there will be no quantity discount.
- All ads are standard in format and typeface. No special typeface, borders or logos are allowed. Copy may be up to 25 words per unit.
- The Bulletin Board ads are listed by manufacturer or by product type under appropriate headlines.
- Ads are set on a six-column page in our classified section under "The Bulletin Board".

How to Place an Ad in the Bulletin Board:

- We suggest you prepare your ad before contacting us. Here are some guidelines:
The first line is set in larger, bold type and should contain standard equipment identification.
The body copy should describe the equipment and state the price.
The closing should supply the seller's name and telephone number.
This is all the information an interested buyer needs for follow up.
- Ads are accepted by mail, phone or by telecopier.
- Deadline is 7 days in advance of Monday issue.
- If you have never advertised with **Computerworld**, we request a check with your order.
- The Bulletin Board ads are not agency commissionable nor may they be applied to contract advertisers inch count.
- We assume no liability for errors beyond the price of the ad.

Here's the Address and Phone.

Computer leasing und Verkauf

Today, Greyhound Computer Overseas Corporation, one of the largest and most experienced computer leasing firms in the business, can meet your computer equipment requirements almost anywhere in the world.

We have a large portfolio of IBM computer equipment. And we have the financial strength to be able to lease, buy, sell, trade, purchase/

leaseback or structure a leveraged lease for you.

Our Agents, Representatives and Affiliates throughout the free world may be contacted through our principal offices or our Dallas headquarters.

For your non-IBM equipment needs, domestic or worldwide, contact Don Haworth or John Hallmark in Dallas.

RANDOLPH'S APPROACH TO COMPUTER LEASING... AND WHY IT WORKS.

Started in 1964, Randolph has been saving its customers 30% to 70% of their DP hardware dollars...

And we know leasing is still the most financially attractive method of acquiring computer equipment at low cost without draining working capital.

But we learned early that the dollar-and-cents approach to computer leasing is only part of a company's concern. Equally important are: prompt installation... dependable servicing... flexible upgrade capabilities... and full support services. Our commitment to this approach is the key to satisfied customers... and our success.

RANDOLPH... COAST TO COAST

We presently serve customers in over 300 cities and towns from Maine to Hawaii.

EQUIPMENT ON THE MOVE

We have under management IBM computers with an original cost of over one-half billion dollars... and we're adding to this investment to meet the changing needs of our customers. Whether it's an IBM 3081 or 4300 system, additional tape drives, disk storage, printers or other peripherals, our equipment inventory is available to meet your company's requirements. Even hard-to-get machines are sought out and acquired for Randolph customers.

BUT... SERVICE MAKES THE DIFFERENCE

The real story behind Randolph's success is our approach to computer support services. To keep computer operations running smoothly and efficiently, these support services have proven to be valuable assets to our customers' D.P. operations.

Continuous IBM Maintenance Program

Manufacturer's service is available day or night, seven days a week, to insure optimal use of your system.

On-Going Technical Support

Randolph's technical staff is on call to help you reconfigure your system to meet changing data processing requirements.

Active Remarketing Division

We assure maximum return on your investment in computer equipment which you no longer use.

MEMBER OF THE FIRST NATIONAL BOSTON FAMILY

In 1972, The First National Bank of Boston purchased our S/360 leasing business, and we became a wholly-owned subsidiary.

With the Bank's financial capabilities behind us, Randolph customers benefit even more from the combined efforts of the best computer leasing and financing people in the United States.

HOW ABOUT YOU?

If your company is not presently leasing computer equipment from Randolph, you'll be interested in our new brochure outlining our special customer support services, and important facts on how we can reduce your computer costs. Call Joseph B. Kelly, Jr., Executive Vice President, 800-243-5307.

COMPUTERWORLD CLASSIFIEDS!

There's No Time For DOWNTIME!

So while the industry works on your system's problems, let us work on your business problems. Advertise in--

One insertion will let a potential audience of over a half a million readers know what you are looking for or have to offer. Whether you are looking to recruit computer professionals, want to buy, sell or lease equipment, have computer time or services to offer, or software packages to sell, and more, Computerworld Classifieds will help you get a lot of exposure and get things done faster.

The open line rate is \$8.05 per line and there is a minimum size of 1 column by 2" at a cost of \$225.40. We can accommodate up to 5 columns and depth measurement increases by half inch increments.

Ads may be mailed in, cleanly typewritten, with a letter stating the size desired and the issue in which it is to be run. Our team of adtakers will take ads that require no artwork or borders over the phone. We also provide telecopier service.

Any borders, logos, or artwork should be sent in with your ad and must be dark and clear enough to be reproduced.

Computerworld comes out every Monday and our deadline for receiving ads is 10 days (or six working days) prior to the issue date desired.

First time advertisers must send payment along with their first ad.

Our mailing address is:

- BUSINESS OPPORTUNITIES

It's easy to advertise in COMPUTERWORLD. If you don't have an advertising agency to supply us with copy, layout and order, or a camera ready mechanical, stat or film negative of your ad, just call one of our ad-takers at 1-800-343-6474. They will be glad to take your ad and typeset it in available fonts at no extra charge. If you have lengthy ads that require logos and artwork, just send a clean typewritten copy of your ad to the classified advertising department at COMPUTERWORLD (teletype service is available); note the ad size you want; and, if you want your company logo to appear in your ad, please be sure to include a camera-ready copy with your insertion order. You should also supply any special borders, headlines and artwork that you want in your ad. Our Art Department will follow your suggested layout as closely as possible if you wish to send one.

**Ad closing is every Friday,
6 working days prior to issue date.**

Rates: Open rate is \$112.70 per column inch. Columns are 2" wide. Minimum ad size is 2 column inches (1 column wide by 2 inches deep), and costs \$225.40 per insertion. Additional space is available in half-inch increments. Some sample sizes and costs are shown.

1 col x 4" - \$450.80
2 cols x 4" - \$901.60
2 cols x 5" - \$1127.00
2 cols x 8" - \$1803.20

Discounts are available when you run more than 35 column inches of advertising in a year anywhere in Computerworld. Box Numbers are available, \$15.00 per insertion.

To reserve space for your ad, or if you'd like more information on Classified advertising in COMPUTERWORLD, call our office nearest you.

Small non-profit, tax exempt sports related evangelical Christian organization needs small computer for word processing, accounting and mailing list functions. Can not pay cash but full value tax receipt should be attractive to right individual. Write: SWM, P.O. Box 2613, Ann Arbor, MI 48106 or call collect (313) 665-4646.

BIDS & PROPOSALS

NOTICE OF REQUEST FOR PROPOSALS

The General Manager of the Utah Transit Authority requests the submission of proposals in five copies to Darrell Swenson, Grants Administrator, Utah Transit Authority, 3600 South 700 West, P.O. Box 31810, Salt Lake City, Utah 84131, any time prior to the hour of 2:00 p.m. on Monday, October 24, 1983 for furnishing a computer-based software inventory system to Utah Transit Authority.

This project is being financed in part with Federal funds. The contract to be let, therefore, is subject to the terms of a financial assistance contract between the Utah Transit Authority and the U.S. Department of Transportation.

The proposals will be received and recorded at the office of the Grants Administrator of the Utah Transit Authority, 3600 South 700 West, P.O. Box 31810, Salt Lake City, Utah 84131 at 2:00 p.m. on Monday, October 24, 1983. The Authority reserves the right to waive any irregularities and informalities or to reject any or all proposals submitted to and accepted by the Authority. The Authority further reserves the right to select the proposal in order to negotiate a contract and to make a contract award in the best interest of the Authority.

The contractor will be required to comply with all applicable and equal employment opportunity laws and regulations. The Utah Transit Authority in accordance with Title VI of the Civil Rights Act of 1964, as amended, and 49 CFR Part 23 issued pursuant to the Act will afford Disadvantaged Business Enterprises (DBE's) and Women Business Enterprises (WBE's) full opportunity to respond and will not discriminate against any interested firm or person on the basis of race, color, sex, age or national origin in the review of qualifications or contract award. Qualified firms will be required to address the utilization of DBE's and WBE's in the text of their proposals.

Proposal forms and specifications will be furnished upon request. Any name appearing on the Comptroller General's List of Ineligible Contractors for Federally Financed and Assisted Construction, Materials or Equipment Contracts is not an eligible bidder.

John C. Pingree
General Manager
Utah Transit Authority

NOTICE

Solicitation of Consultant Services For Operation of Control Center Integrated Motorist Information System N.Y. State Department of Transportation

The New York State Department of Transportation is soliciting consultant services to operate a computer-assisted freeway and arterial street traffic management control center at its Region 10 office in Hauppauge, New York. The operators at the control center will oversee traffic operations on 128 miles of highways in the northwestern quadrant of Long Island.

Any firm wishing consideration and further information must submit a letter of interest together with Federal Standard Form 254 to Mr. Joseph Contegni, IMIS Project Director, New York State Department of Transportation, State Office Building, Veterans Memorial Highway, Hauppauge, New York 11788, no later than Thursday, November 10, 1983.

is available for the establishment of your German Sister Company.

If you have the right Product, we have the Know-How to sell, support and maintain it in Germany.

Lets start now, please send your Offer.

Chiffre ...
CW-84278, Computerworld,
Box 880, Framingham, MA 01701

The Omaha Public Power District invites proposals for an interactive computer software package to perform electrical distribution planning and analysis and to install this software on either the District's IBM 4341 mainframe or on a minicomputer supplied by the vendor. Interested vendors capable of providing such a package may obtain copies of the specifications by contacting:

E. Morrisette, Manager-Contracts
Omaha Public Power District
1623 Harney Street
Omaha, NE 68102
Tel. (402) 536-4680
Requests will be received until 4:30 pm October 7, 1983.

CLASSIFIED ADVERTISING ORDER FORM

Computerworld's
Classifieds work.

Issue Date: Ad closing is every Friday, 10 days prior to issue date.

Sections: Please be sure to specify the section you want: Time and Services, Software for Sale, Position Announcements and Buy/Sell/Swap. (Available upon request: Software Wanted, Turnkey Systems and Real Estate.)

Copy: We'll typeset your ad at no extra charge. Please attach CLEAN typewritten copy. Figure about 25 words to a column inch, not including headlines.

Cost: Our rates are \$112.70 per column inch. (A column is 2" wide.) Minimum size is two column inches (2" wide by 2" deep) and costs \$225.40 per insertion. Extra space is available in half-inch increments and costs \$56.35. Box numbers are \$15.00 extra.

Billing: If you're a first-time advertiser, (or if you have not established an account with us.) WE MUST HAVE YOUR PAYMENT IN ADVANCE.

Ad size desired:

_____ columns wide by _____ inches deep.

Issue Date(s): _____

Section: _____

Signature: _____

Name: _____

Company: _____

THE BULLETIN BOARD

A Low-Cost Way to Sell Hardware and Software
in Computerworld.

What is The Bulletin Board?

It's a classified section in Computerworld designed especially for the selling and buying of individual pieces of hardware in a convenient, low-cost format. It is especially suited to companies that have a piece of used equipment they want to sell. For one low price, you can inform more than half a million Computerworld readers around the country of your equipment's availability.

How Does The Bulletin Board Work?

Bulletin Board ads come in standard units (one column wide by one inch deep) and standard typefaces. (Units may be combined to produce deeper ads, but one column is the maximum width and no units of less than one inch are available.) Ads are arranged under headings (such as "IBM", "DEC" or "Printers"). The headline of the ad is set in larger, bold type, and should contain the standard equipment identification. The body copy should describe the equipment very briefly and give the person to contact. This is all the information an interested buyer needs to follow up. No ad should have more than one piece of equipment or software.

The price for each standard unit is only \$115.00 (One unit minimum and no fractional units available.) Anyone can place an ad, but no agency commissions are paid, no quantity discounts allowed, and no credit toward rate is given for contract advertisers who advertise in other sections of Computerworld. It's a simple and effective system for buying and selling hardware and software.

How to Place an Ad in the Bulletin Board.

Ads are accepted in the mail, by phone or by telecopier. Ads can be accepted up until the Monday before issue (7 days in advance of issue date). You should write out your ad before submitting it. (The standard size will hold approximately 25 words of copy.)

Once you've written your ad, send it in with the coupon below or call one of our ad-takers. (If your company has never advertised with us before we request a check with your order.)

Remember that all ads are standard. No special typefaces, no borders and no logos are allowed. Ads are set on a six-column page in our classified section under the heading "The Bulletin Board." We assume no liability for errors beyond the price of the ad in the case of material errors.

ORDER FORM**COMPUTERWORLD BULLETIN BOARD**

Issue Date: Ads can be accepted up until the Monday preceding the issue desired. Computerworld comes out every Monday.

Classifications: Most ads will be classified according to the brand of equipment that is being bought or sold. These classifications are: Altos, Burroughs, Control Data, Data General, Digital/DEC, Hewlett Packard, Honeywell, IBM, NCR, Salvage, Sperry Univac, Teletype, Terminals, TI, WANG, Miscellaneous.

Copy: Copy for your ad must be clearly typewritten and may be sent in via the mail or by telecopier (telecopier extensions are 410 and 451). Ads may be given over the phone to our team of ad takers. The standard size is 1 column by 1 inch deep. These units may be combined to form larger sized ads. Describe the equipment very briefly, give the price and the name of the person to contact. All ads will be set up using a standard format. No borders or logos are allowed.

Cost: The price for each standard unit is \$115.00 (One unit minimum and no fractional units allowed). There are no agency commissions and no quantity discounts.

Billing: Once you've written your ad, send (or call) it in with your name and address for billing purposes and we'll run it. (If your company has never advertised with us before, we request a check with your order.)

15 pointed questions to ask MSA or any software supplier

These questions will help you when you sit down with individual software companies.

They're tough questions. Relevant ones. And any supplier who is worth his salt should be able to answer them without backpedaling.

Ask MSA

We'll answer all these questions to your satisfaction—plus any others you may have.

In fact, we're probably the best equipped to answer them. Because MSA is the software company. We offer the most complete line of totally integrated systems in the software industry, including financial, human resource and manufacturing.

So you avoid the headache of trying to tie together individual systems. (And the even bigger headache of adding to them.)

With MSA's integrated systems, there's no unnecessary duplication of data or effort. Reporting is faster. All your company's information is more timely and accurate—and in the right form.

Our technical edge comes from experience

Staying ahead is easier for a company that's steeped in software technology. MSA has spent years developing, refining, testing and enhancing our systems.

This year alone, we'll invest \$25 million to make sure all our systems are technologically razor sharp. That gives us a decided advantage over flash-in-the-pan technology that may not have the bug-free logic of a more experienced system.

It also gives you a decided advantage over "custom" systems you have to update yourself.

MSA relieves you of that time-consuming burden. We update and enhance your software for a full year. Then we continue this service for a surprisingly low annual fee.

Maintenance includes keeping your system up-to-date technologically. Enhancing it with new features that make it work even harder for you.

And making sure it reflects changes in accounting procedures and government regulations, including 401(k), TEFRA, and FAS52. (That

eliminates a lot of tedious work you normally have to do.)

Save this box. It can help you make an intelligent software decision.

1. Can you offer us a complete range of software systems designed to work together?

Or will we have to piece together a patchwork of systems?

2. Are your systems just record keepers, or can they really help us make decisions?

Can we pull together information from any of our integrated systems? In exactly the form we want it?

3. Can you provide business software for both mainframe and microcomputers?

Do you develop this software yourself or do you simply market it for another company?

4. Are your systems truly online current?

How many of your systems are online? How secure are they?

5. Will my company have to be the one that discovers the bugs in your brand new system?

Just how long have your systems actually been used, and how have they been tested?

6. Will you update your systems as technology advances and regulations change?

What are some of your most recent updates? Will you keep us current on regulatory changes?

7. Do your systems really do everything you say they will?

Or will we have to change them or add to them to get the features we want?

8. How long have you been in business?

What are your revenues? What is your growth record? Where will your company be five years from now?

9. How many systems has your company installed?

How many of these were installed in the past six months? How many of your earlier customers are still using—and liking—your systems?

10. Do your financial systems handle unlimited foreign currencies?

Do your financial systems use a common set of currency exchange rates?

11. Can you link our executives' computers directly to the mainframe—so they can get their own information?

Is that software available right now?

12. How will you make sure our own people thoroughly understand your system?

Do you have educational centers near us, or will we have to travel all the way across the country to find one? Will you be there to help during installation and after?

13. How many of your people specialize in software for my industry?

How many accountants work for you? Human resource specialists? Manufacturing experts?

14. Do your systems have built-in features that make them easier to use?

What happens if someone needs help figuring out a feature? Do you have online documentation that's easy to understand?

15. As my business changes, will your system be flexible enough to change with it?

Or will we have to pay a lot to revamp it? Or even regenerate it?

35,000 days of training

At MSA, we make sure your people have a firm grasp of our systems. Last year alone, we conducted more than 35,000 student days of customer training for over 1,800 companies. At education centers all over the world, as well as at our headquarters.

From training sessions to cassettes to complete, easy-to-understand documentation, MSA provides the most extensive Customer Education Programs in the industry.

And MSA systems are just as friendly as our people. Our online HELP feature actually guides users through our systems, and EASY-SCREEN™ lets them design their own screens without creating data processing nightmares.

If there's ever a question or problem with our systems, MSA customers are always close to service.

Our Account Managers are knowledgeable, responsive, and backed by a complete team of industry specialists.

The heart of our integrated systems

It's MSA's General Ledger System. Combined with Accounts Payable/Purchase Order Control and our other systems, it gives your company complete control over your financial information.

Over 800 data process-

ing specialists, accountants, and financial experts work together to make MSA's financial systems the most advanced and most highly integrated in the industry.

MSA has the answers

Whatever your size—whatever your business—MSA has a total software solution.

We'll provide the highest quality integrated online software.

We'll tie your business and manufacturing software systems together, using our exclusive Extended Closed Loop™ manufacturing system.

We'll provide business software for your microcomputers, through our Peachtree Software Company.

We'll even link your microcomputers to your company's mainframe—with

MSA ready-to-install application software

1. General Ledger
2. Accounts Payable/Purchase Order Control
3. Budgetary Control/Encumbrance
4. Fixed Assets Accounting
5. Capital Expenditure Tracking
6. Forecasting & Modeling
7. Accounts Receivable
8. Order Processing
9. Foreign Exchange
10. Inventory & Purchasing
11. Payroll
12. Personnel Management & Reporting
13. ALLTAX™ Taxing System
14. ALLTAX Reporter™
15. Manufacturing Control System (MRP II)
16. Executive Peachpak™
17. Peachtree Software™ business systems for microcomputers
18. Peachtree Software™ office productivity systems for microcomputers

ALLTAX, ALLTAX Reporter, EASY-SCREEN, Executive Peachpak, Peachtree Software, and Extended Closed Loop are trademarks of Management Science America, Inc.

MSA's Executive Peachpak™ application software. A revolutionary concept that lets executives get the mainframe information they need through their personal computers.

Talk to us

If we've whetted your appetite with our 15 questions, clip the coupon below.

We'll send you a concise booklet that will help you even more in your deliberations. We'd also like to send you more information on how MSA can help you plan for software. And on individual systems.

Just fill in the information below, or contact Robert Carpenter at (404) 239-2000.

Management Science America, Inc.
3445 Peachtree Road, N.E.
Atlanta, Georgia 30326.
